RESULTS
OF THE
**MAGNETICAL AND METEOROLOGICAL
OBSERVATIONS**
MADE AT
THE ROYAL OBSERVATORY, GREENWICH,
IN THE YEAR
1921.

UNDER THE DIRECTION OF

SIR FRANK DYSON, M.A., LL.D., F.R.S.,
ASTRONOMER ROYAL.

PUBLISHED BY ORDER OF THE BOARD OF ADMIRALTY, IN OBEDIENCE TO
HIS MAJESTY'S COMMAND.

LONDON :
PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses :
Imperial House, Kingsway, London, W.C.2, and 28, Abingdon Street, London, S.W.1 ;
York Street, Manchester ; 1, St. Andrew's Crescent, Cardiff ;
or 120, George Street, Edinburgh ;
or through any Bookseller.

1924.

GREENWICH MAGNETICAL AND METEOROLOGICAL OBSERVATIONS, 1921.

INTRODUCTION.

In the present volume a brief account is given of the instruments and methods of reduction now in use. Fuller information, principally of an historical nature, may be found in the Introductions to the volumes for 1909 and previous years.

§ 1. Personal Establishment and Arrangements.

During the year 1921 the personal establishment in the Magnetical and Meteorological Department of the Royal Observatory consisted of Walter William Bryant, Superintendent, aided by three Computers. The Computers employed during the year were :—G. F. Wells, E. H. Tibbitts, and Miss E. W. Clack.

§ 2. General Description of the Buildings and Instruments of the Magnetical and Meteorological Observatory.

The Magnetic Pavilion is constructed of non-magnetic materials, and stands in an enclosure in Greenwich Park, 350 yards to the east of the Observatory, on a site carefully chosen for its freedom from abnormal magnetic conditions. In the enclosure there are two sets of thermometers used for ordinary eye observations, the photographic wet-bulb and dry-bulb thermometers, thermometers for solar and terrestrial radiation, two earth thermometers, and two rain-gauges.

The anemometers, three rain-gauges, and the sunshine recorder are fixed above the roof of the Octagon Room (the ancient part of the Observatory).

E ii INTRODUCTION TO GREENWICH MAGNETICAL OBSERVATIONS, 1921.

For a detailed description of the New Magnetograph House, which was completed in 1914, reference should be made to the Greenwich Observations for 1915.

The New Magnetograph House stands 50 feet north-west of the Magnetic Pavilion in which the absolute magnetic observations are made. The recording instruments are situated in a small inner chamber 15 feet long, 12 feet wide, and 8 feet high. This chamber is supported on small concrete piers and surrounded by an outer chamber, whose walls of non-conducting material are nearly 2 feet thick. Between the walls of the two chambers is an air space of from 2 to 3 feet. The inner chamber is electrically heated by about 50 suitably insulated low-temperature non-magnetic metallic resistance strips, each consuming 25 watts. The current used is alternating, and is therefore without effect upon the magnetic registration.

The temperature is controlled by a thermostat placed in the centre of the room, at the same level as the magnetic instruments. This actuates a relay, which switches the electric current into or out of the heating circuits.

The centres of the three instrument piers are situated as follows: For the north force instrument, 2 feet south and 2 feet 6 inches east of the north-west angle of the room; for the declination instrument, 5 feet 6 inches south and 5 feet east of the same angle; for the vertical force instrument, 2 feet north and 3 feet west of the south-east angle. The two piers which support the recording mechanism occupy the north-east and south-west corners of the room, their longer sides being in the direction of the meridian. The clocks can be wound and the recording drums inserted or removed through shuttered openings in the wall of the inner chamber. The temperature in the chamber is read daily from a thermometer attached to the north force instrument, by means of a small telescope, projecting into the room.

The Magnetograph House contains also the photographic and standard barometers. The former is mounted on the south wall of the instrument room, 5½ feet from the south-east corner of the room. The standard barometer is situated in the passage way, being supported on a board screwed to the north-west corner pillar of the inner room.

The north force and declination instruments record on the north-east drum; the vertical force instrument and the barometer record on the other drum. Both drums are horizontal and are 10 inches long by 5½ inches in diameter. Their normal period of revolution is 30 hours and the scale 15 mm. to the hour. The

registering beams of light are focussed on the drum by an adjustable cylindrical lens. Two horizontal straight filament lamps mounted at suitable heights on the east and west walls of the chamber provide the time registration for the photographic sheets. The lamps are illumined for a period of one second centred at each exact hour of Greenwich time, the current being controlled by a relay connected to the Mean Solar clock in the Clock Room of the Observatory. The effect is to produce narrow dark hour lines right across the photographic records.

§ 3. *Subjects of Observation in the year 1921.*

The observations comprise determinations of absolute magnetic declination, horizontal force, and dip; continuous photographic record of the variations of declination and vertical force, and of the north component of horizontal force; eye observations of the ordinary meteorological instruments, including the barometer, dry- and wet-bulb thermometers, radiation and earth thermometers; continuous photographic record of the variations of the barometer, dry- and wet-bulb thermometers, and atmospheric potential gradient; continuous automatic record of the direction, pressure, and velocity of the wind, and of the amount of rain; registration of the duration of sunshine; general record of ordinary atmospheric changes of weather, including numerical estimation of the amount of cloud, special cloud observations in connection with the International Balloon ascents, and occasional phenomena.

A camera recording the trace of stars in the neighbourhood of the celestial Pole was brought into regular use at the beginning of 1920, with a view to obtaining an indication of the amount of cloud in the night sky.

Since 1885, Greenwich civil time, reckoning from midnight to midnight, and counting from 0 to 24 hours, has been employed throughout the magnetical and meteorological sections, except in regard to the sunshine registers (see p. E xvii).

§ 4. *Magnetic Instruments.*

DECLINATION MAGNET FOR ABSOLUTE DETERMINATIONS.—Since 1899 January 1, regular observations of declination have been made in the Magnetic Pavilion. The hollow cylindrical magnet Elliott No. 75 is used in conjunction with a telescope by Troughton and Simms, placed on a pier about 2 feet south of the magnet. The magnet is about 4 inches long, and at one end is an engraved glass scale for collimation. The telescope is 21 inches long, and the aperture of its object-glass is 2 inches; its horizontal circle is 16·6 inches in diameter, divided to 5' and read by verniers to 5". It has no vertical circle. The eye-piece has one fixed horizontal wire and one vertical wire, moved by a micrometer screw, the value of one revolution of which is 1' 34"·2. The adopted collimation reading was 10°·140.

The vertical axis of the telescope is adjusted by means of a fixed level, one division of which corresponds to $1''\cdot 15$. The level correction for inequality of the pivots of the axis of the telescope was found in 1898 to be $-6^{\text{div.}}\cdot 0$ or $-6''\cdot 9$.

Since 1913 September the magnet has been suspended by a tungsten wire of 0.02 mm. diameter, and about 25 cm. length. The effect of 90° of torsion is to turn the magnet through about $4'$. The torsion is found to change little or not at all; it is checked at intervals, and a correction on this account is made when necessary. The collimation error is eliminated by reversing the magnet in the middle of each month (by turning the magnet through 180° in its carrier, about the longitudinal axis), so that half the observations are made with the scale direct and half with the scale reversed.

The reading of the azimuth circle corresponding to the astronomical meridian is determined by observations of Polaris which, weather permitting, is observed once a week.

Declination observations have been made at least thrice weekly throughout 1921.

ABSOLUTE HORIZONTAL FORCE INSTRUMENT.—This instrument is of the Kew unifilar pattern, and rests on a slate slab in the Magnetic Pavilion. A full account of its construction and use is given in earlier volumes, and will not be repeated here.

Observations of the absolute horizontal magnetic force are made twice weekly. Observations of the moment of inertia of the deflecting magnet are made occasionally.

DIP INDUCTOR.—The dip inductor is used in conjunction with a Broca mirror galvanometer, with electric light and scale. Observations are made in four positions to eliminate any small errors arising from slight asymmetry in the instrument. After the first adjustment, the ring is reversed about a horizontal axis and a second adjustment obtained: the instrument is then reversed in azimuth and two further adjustments made. The circles for the measurement of inclination and azimuth are each 8 inches in diameter, and are read by means of screw micrometers to one second of arc. The levels on the base can likewise be read to one second. A detailed description of the dip inductor will be found in the volume for 1915.

The observations are made thrice weekly.

THE DECLINATION VARIOMETER.—This instrument consists essentially of a magnet and mirror suspended by a fine phosphor-bronze strip 30 cm. long. The

DECLINATION MAGNET FOR ABSOLUTE DETERMINATIONS.

E v

torsion head to which the top of the fibre is attached is adjusted so that there shall be no torsion in the mean position of the magnet. A quarter revolution of the torsion head deflects the magnet through $8'$.

The magnet consists of nine short pieces of steel 4.5 cm. long and of 1 mm. diameter, supported in an aluminium holder. The mounting of the movable mirror attached to this holder is also of aluminium. It can be turned relative to the magnet, so that the beam of light can be suitably adjusted in azimuth. The fixed mirror for base-line registration is situated beneath the magnet and mirror system. Both mirrors are of silvered glass, 2.5 cm. long and 1 cm. wide, and possess the necessary adjustments for tilt and orientation. The magnet is surrounded by copper blocks, rendering the instrument almost dead-beat.

The instrument rests on three foot-screws, which provide adjustment for level. It is completely enclosed by a tall brass cylinder with lid, resting on the concrete pier; this protects the instrument from dust, draughts, and accidental displacements. The lens which focusses the beam of light passing from lamp to mirror and mirror to drum is mounted in the side of this cylinder, the mirror chamber of the instrument itself being closed by a plane glass window.

The distance from the mirrors to the centre of the slit of the drum box is such that the scale value at the middle of the photographic sheets is $0' \cdot 58$ per millimetre; at the present time this angle represents $3 \cdot 11 \gamma$, in terms of force. Since the beam of light, when directed towards the centre of the slit, makes an angle $11^\circ \cdot 42'$ with the normal to the drum, the scale value is not the same right across the sheet, the percentage difference of scale between the centre and edges being 0.4. This is allowed for, when necessary, in measuring the photographic traces.

The photographic sheets are changed generally at about 11 a.m. The time scale is 15 mm. per hour. The base-line value is determined from the absolute declination observations.

THE NORTH FORCE VARIOMETER.—The general construction of this instrument resembles that of the declination variometer. The suspension is of quartz, however, 20 cm. long, and the magnet system contains a single magnet similar to those in the declination instrument. In other respects the magnet and mirror systems of the two instruments are identical.

The torsion head is adjusted so that the magnetic axis of the magnet system is kept in the (geographical) east-west direction. The angle between this direction

and the line joining the mirror to the middle of the slit of the drum is $7^{\circ}30'$. The mirror was adjusted relative to the magnetic axis so that the angle between the latter and the normal to the mirror agreed with the above angle to within a few minutes of arc. The magnet can consequently be maintained in the right direction by keeping the beam of light directed towards the middle of the photographic sheet.

The instrument is enclosed in a brass cylinder, in which is mounted the focussing lens, as in the case of the declination variometer. Through apertures in this casing also project two arms, one to the north and the other to the south of the instrument, to which they are attached. These are designed to support a deflecting magnet for the determination of the scale value of the variometer. The deflecting magnet is similar to those in the magnet system itself, but is cased in brass so as to be preserved from rust and made convenient for handling ; its external diameter and length are 5 mm. and 7 cm. respectively. Deflections are made at two distances along both north and south arms, and in each position the magnet is used with its axis directed to the north and also to the south. Thus eight deflections are involved in each determination of scale value. The deflected positions are recorded on the photographic sheet, and the measurement is performed subsequently. The two adopted distances of the deflecting magnet from the magnet system are 27 cm. and 32 cm. The deflecting forces at these two distances are determined monthly by deflecting the absolute horizontal force magnet in the same way ; the moment of the latter being known, the angle of deflection enables the deflecting force to be calculated readily in absolute measure. It is found that the magnetic moment of the deflecting magnet is slowly diminishing ; the deflecting forces at the above two distances were $233\cdot1\gamma$ and $141\cdot5\gamma$ in the mean of 1921, and the present rates of diminution of their values are $4\cdot0\gamma$ and $2\cdot4\gamma$ per year.

The scale value determinations for the north force instrument are made once weekly. Since the instrument was installed the scale value has been found to be slowly diminishing. It has been treated as constant throughout each month, the difference from month to month being very small (about $\cdot01\gamma$ per mm.). The adopted scale value for the month of 1921 January was $3\cdot42\gamma$ per mm.

The base-line value of the instrument is determined by means of the absolute horizontal force observations, together with the absolute and photographic declination determinations. The base line is steadily changing (though at a decreasing rate), owing to the gradual diminution of the moment of the magnet

system. The mean daily rate of change of base-line value during 1921 was 0.50γ . The progressive change of base-line value is allowed for in the reductions.

The instrument is kept at a constant temperature, and therefore the records require no temperature correction in general. The temperature correction of the instrument was determined from observations secured when the whole room was heated up to a high temperature. It was found that a rise of temperature through $1^\circ C.$ increased the base-line value of the instrument by 2γ . During the periods when the thermostat was out of order and under repair, the observations were corrected for temperature according to this determination.

THE QUARTZ-THREAD VERTICAL FORCE VARIOMETER.—For a detailed description of this instrument reference may be made to the *Philosophical Magazine*, vol. vii., sixth series, p. 393, 1904. The base of the instrument consists of a metal casting with uprights at the two ends, carrying attachments for the ends of the quartz fibre which supports the magnet system. The latter consists of two magnets, 8 cms. long and 1 mm. in diameter, which are attached by small platinum stirrups to two rods of fused quartz; these are fused to a quartz plate, the upper surface of which is optically worked and platinised to form a plane mirror. The quartz rods are drawn out at their other ends into fibres of about 0.008 to 0.010 cm. diameter; one of these is attached to a coiled quartz spring. The quartz spring and the other fibre are soldered to small brass rods fitting into clamps at the two ends of the metal base. The thread is under sufficient tension to stretch the spring through about two millimetres. A right-angled prism is supported in a frame above the mirror, so as to reflect the light in a horizontal direction; a single lens is placed beneath to focus the light on the recording drum. The prism frame is adjustable in azimuth in order to enable the trace to be brought to any desired part of the sheet. An adjustable mirror beneath the quartz fibre and adjacent to the mirror of the magnet system serves to give a base line.

The sensitiveness of the instrument is varied by adjusting the centre of gravity of the movable system. For this purpose a small vertical quartz arm is fixed to one of the rods attached to the mirror and a small piece of brass can slide on this arm, being fixed into any desired position by means of a little shellac. The sensitiveness adopted at the beginning of 1920 was 2.0γ per mm.

The variometer was not at first compensated for temperature changes and was found to possess a temperature coefficient of 25γ per $1^\circ C.$ The gradual change in the thermostat control temperature necessitated compensation. The adjustment was made by means of a small stirrup sliding on one of the magnets, and the chamber was alternately heated and cooled until, with a range in temperature of $8^\circ C.$, there was no measurable displacement of the photographic trace.

E viii INTRODUCTION TO GREENWICH MAGNETICAL OBSERVATIONS, 1921.

A new instrument of similar design was brought into use on April 11. The sensitiveness of this instrument was, in the mean, $2\cdot6 \gamma$ per mm. (see below). The quartz fibre broke on June 7 and the old instrument was replaced and remained in use until October 24. During this period the sensitiveness was $2\cdot7 \gamma$ per mm. The new instrument was replaced on October 24 and on the completion of the temperature compensation was brought into use on October 29. The scale value is not quite uniform across the sheet; the variation in force is computed from the scale value observations as a quadratic function of the ordinate. From October 29 the mean scale value was $2\cdot2 \gamma$ per mm.

SCALE VALUE OF VERTICAL FORCE VARIOMETER.—The scale value of the instrument is determined by the method of deflections, which in this case are produced electro-magnetically. The deflecting coil consists of two equal parallel circular rings of wire separated by a distance equal to their own radii. The wire is laid in V-grooves on a vulcanised fibre framework which rests permanently on the instrument pier. The leads and connections between the two separate rings are laid side by side. With such an arrangement a very uniform magnetic field is produced at the centre of the coil, when an electric current circulates in the same direction round the two circles. The diameter of each circular turn of wire is $55\cdot7$ cm., and the distance between their two centres is $27\cdot7$ cm. If x, ρ represent axial and radial co-ordinates, measured in cms. from the centre of the coil as origin, the value of the axial magnetic force at (x, ρ) , due to a current of strength A ampères, is—

$$3239A[1 - 0\cdot0129 \frac{x^2 - \frac{1}{2}\rho^2}{R^2} - 1\cdot782 \frac{x^4 - 3x^2\rho^2 + \frac{3}{8}\rho^4}{R^4}] \dots$$

where R is $31\cdot06$ cms., being the distance from the centre of the coil to a point on the circumference of either ring. The coil is placed so that its centre plane is horizontal, and with its centre as nearly as possible coincident with the vertical force magnets; there is no horizontal magnetic field produced by the coil in the plane of the magnets, and the vertical force produced is constant to within 0·5 per cent. throughout the space occupied by the magnets. Within this limit of error, also, an inclination of the magnets to the horizontal even by several degrees would not affect the vertical force to which they would be subject; and the horizontal forces on them, besides being inappreciable, would have a force and not a couple resultant.

In making scale value determinations, the current is supplied by a small portable battery, and is measured by an ammeter. Current strengths of 50 and 100 milliampères are used, which from the above formula, allowing for the slight noncentrality of the magnets with respect to the coil, are found to produce deflecting forces of $161\cdot5$ and 323γ respectively. The scale value is found to be nearly uniform across the sheets for the old instrument. For the new instrument, the variation is greater and is allowed for.

The scale value determinations are made weekly. The scale value is found to be nearly constant.

The base line value is determined from the dip observations, in conjunction with the recorded values of north force and declination.

§ 5. *Magnetic Reductions.*

The results given in the magnetic section refer to the civil day, commencing at midnight.

Before the photographic records of magnetic declination, north force, and vertical force are discussed, they are divided into two groups—one including all days on which the traces show no particular disturbance, and which, therefore, are suitable for the determination of diurnal inequality; the other comprising days of unusual and violent disturbance, when the traces are so irregular that it appears impossible to treat them except by the exhibition of every motion of each magnet through the day.

The separation hitherto adopted has been based upon the judgment of the Superintendent of the department guided by the principle that, in general, a day on which a variation of more than 300γ in horizontal force occurs, or, correspondingly, a variation of more than one degree in declination, is to be classed as a day of great disturbance. Days on which the variations exceed half these quantities are classed as days of lesser disturbance.

Following the principle thus defined, there are four days (May 13, 14, 15, 16,) in the year 1921 which are classed as days of great disturbance. On May 14–15 the variation in vertical force was greater than could be recorded on the photographic sheet, the trace being lost for nearly eleven hours, in consequence. Days of lesser disturbance are May 19 and October 8. When two days are mentioned together, it is to be understood that the reference is usually to one set of photographic sheets extending from 11 a.m. to 11 a.m., and including the last half and the first half respectively of two consecutive civil days.

The mean ordinates for each hour are measured by the aid of an etched glass scale, the hour being the period of sixty minutes *commencing* at the time named in the table, and from the tables of these measures, for each calendar month, are obtained the mean monthly values for each hour of the day, and the mean daily value of the element for each day of the month. The daily mean is taken from the 24 mean ordinates. Tables I to XV contain the results for declination, north force, and vertical force. For each element the mean daily value and daily range are given for every day of the year, together with the monthly and annual mean diurnal inequalities for all days and for quiet and disturbed days (as selected by the International Committee). In the formation of diurnal inequalities it is unimportant whether a day omitted be a complete civil day, or the parts

E x INTRODUCTION TO GREENWICH MAGNETICAL OBSERVATIONS, 1921.

of two successive civil days making together a whole day, although in the latter case the results are not available for daily values. Four days in May were omitted on account of great disturbance, in the formation of these Tables.

The variations of declination are given in arc and those of north force and vertical force in C.G.S. measure.

The magnetic diurnal inequalities of declination, north force, and vertical force, for each month and for the year, as given in Tables IV, VIII, and XII, have been treated by the method of harmonic analysis, and the results are given in Table XVI.

The results of the absolute observations of declination, horizontal force and dip are given in Tables XVII, XVIII and XIX respectively. These tables contain also the values of the base-lines of the declination, north force and vertical force magnetograms respectively, deduced from the absolute observations.

Table XX contains an annual summary of the magnetic elements, giving the mean monthly values of declination, horizontal force and dip; also of the west, north and vertical components of the total force. The monthly mean diurnal ranges and the sums of hourly deviations from means of declination, north force and vertical force are also given.

In Tables VI, X, and XIV are given mean diurnal inequalities of declination, horizontal force, and vertical force derived from five quiet days each month. In Tables VII, XI, and XV are given similar inequalities derived from five disturbed days each month, both sets of days being selected by the International Committee.

Reduced copies of the magnetograms for certain disturbed days (mentioned on p. E ix) have been printed in each volume since 1882. The list of these days since the year 1889 has been selected in concert with M. Mascart, or his successor M. Angot, so that the two Observatories of Val Joyeux (formerly of the Parc Saint Maur) and Greenwich should publish the magnetic registers for the same days of disturbance with a view to the comparison of the results. As far as possible the days of greater disturbance are those selected by the International Committee.

The plates are followed by a brief description of other significant magnetic motions (superposed on the ordinary diurnal movement) recorded during the year.

With regard to the plates, on each day three distinct registers are usually given, viz.: declination, north force, and vertical force.

At the foot of each plate, scales, in C.G.S. measure, are given for each of the magnetic registers.

The subjoined table gives the values of Magnetic Elements determined at the Royal Observatory, Greenwich :—

* Corrected for the effect of the iron in the new buildings.

† The values of the Horizontal Force from 1861 differ from those given in previous volumes, on account of the correction mentioned on p. E iv, 1914 volume.

‡ These values of the dip differ slightly in some instances from those given in previous volumes, on account of the correction mentioned on p. E v, 1912 volume.

In 1861 the new Unifilar Apparatus for absolute Horizontal Force and the Airy Dip-Circle were introduced, both sets of apparatus being used in that year. In 1864 the excavation of the Magnetic Basement caused the suspension of complete Declination Observations. From 1914 the Dip was determined with the Inductor.

§ 6. *Meteorological Instruments.*

STANDARD BAROMETER.—The standard barometer is Newman No. 64. Its tube is 0^{in.}.565 in diameter, and the depression of the mercury due to capillary action is 0^{in.}.002, but no correction is applied on this account. The cistern is of glass, and the graduated scale and attached rod are of brass; at its lower end the rod terminates in a point of ivory, which in observation is made just to meet the reflected image of the point as seen in the mercury. The scale is divided to 0^{in.}.05, subdivided by vernier to 0^{in.}.002. The barometer was mounted in 1840 on the southern wall of the western arm of the Upper Magnet Room at a height above mean sea level of 159 feet. It was transferred to the New Magnetograph House on 1917 April 3, where the height above mean sea level is 152 feet.

The barometer is read at 9^h, 12^h (noon), 15^h, 21^h (civil reckoning) every day. Each reading is corrected by application of an index-correction, and reduced to the temperature 32°. The readings thus found are used to determine the value of the instrumental base line on the photographic record.

THE PHOTOGRAPHIC BAROMETER.—In consequence of the use of a horizontal drum for the new vertical force instrument, it became necessary to modify the lever mechanism of the photographic barometer on its removal to the Magnetograph House in 1916. On account of the optical magnification associated with a moving mirror at some distance from the instrument, the new mechanism had to be such as would reduce the motion of the plunger to a smaller amount at the end of the lever which carried the mirror. In the actual arrangement two levers are used, the one connected to the arm of the plunger resting in the free surface of the mercury, being 12 inches long from plunger to pivot. A pin with a rounded conical point is screwed into this lever at a distance of 1 inch from the pivot. On this pin rests the plane under-surface of a shorter lever, which is 4 inches long from its pivots to this pin, and is set at right angles to the first lever. Both levers are approximately horizontal in their mean position. On the short lever is mounted the moving mirror of the instrument. This mirror is 2·5 cm. long and 1 cm. wide, and is mounted horizontally in a suitable frame attached to the lever, just above its pivots. The first lever lies east and west, so that the axis about which the mirror turns is in the same direction. The motion of the beam of light is transformed so as to be horizontal by a fixed right-angled prism supported above the mirror. A lens of suitable focus is mounted in a vertical plane in front of the prism, and brings the beam of light from

the straight filament lamp, which also illuminates the vertical force variometer, to a focus on the drum. A base-line mirror, similar to the moving mirror, is mounted in a vertical plane behind the lower half of this lens. Provision is made for all necessary adjustments of level and azimuth and tilt of the base line and moving beams of light.

The barometer is mounted on the south wall of the instrument chamber, at a distance of 3 feet from the vertical force instrument. The levers and optical parts are screwed to a brass plate supported on a small shelf by the side of the barometer. The instrument is 12 feet from the recording drum, and consequently the scale value of the record is 3 cm. on the sheet for 1 cm. change of height of the mercury column of the standard barometer. In the photographic barometer both arms are, near the surface of the mercury, of the same bore, so that the plunger moves through only half the change of height of the standard barometer.

The photographic sheets being 24 cm. wide, the whole range of barometric motion can be included without changing the zero, as was formerly necessary, when the scale value was 4 to 1 in place of 3 to 1 as now.

The metal parts of the instrument are all of brass or aluminium, except the cast-iron plunger disc (which is 24 mm. in diameter and 4 mm. thick) and four small pivot screws, which are of steel. These are sufficiently far from the vertical force instrument to ensure that they do not affect its records. The weight of the plunger and lever mechanism is relieved by a balance weight on the far side of the pivot, so that the plunger rests on the mercury surface without appreciably depressing it. There is some evidence of a slight difference of behaviour according to whether the barometer is rising or falling.

The scale value of the instrument is actually determined experimentally by comparison with the readings of the standard photographic barometer. Readings of the latter are taken four times daily, and from them the base-line value of the barometer is adopted, having regard to the tendency referred to in the preceding paragraph.

DRY- AND WET-BULB THERMOMETERS.—The standard dry- and wet-bulb thermometers and maximum and minimum self-registering thermometers, both dry and wet, are mounted on a revolving frame planned by Sir George Airy. This, together with details of the thermometers and the corrections applicable to them, may be found fully described in the volumes for 1912 and previous years.

E xiv INTRODUCTION TO GREENWICH METEOROLOGICAL OBSERVATIONS, 1921.

Since 1899 January 4 this stand has stood in an open position in the Magnetic Pavilion enclosure.

The corrections to be applied to the thermometers in ordinary use are determined, usually once each year for the whole extent of scale actually employed, by observations at 32° in pounded ice and by comparison with the standard thermometer No. 515, kindly supplied to the Royal Observatory by the Kew Committee of the Royal Society.

The dry-bulb thermometer used throughout the year was Negretti and Zambra, No. 45354. The correction $-0^{\circ}.4$ has been applied to the readings of this thermometer. The wet-bulb thermometer used throughout the year was Negretti and Zambra, No. 94737. The correction $-0^{\circ}.2$ has been applied to the readings of this thermometer.

The dry- and wet-bulb thermometers are read at 9^{h} , 12^{h} (noon), 15^{h} , 21^{h} (civil reckoning) every day. Readings of the maximum and minimum thermometers are taken at 9^{h} , 15^{h} , and 21^{h} every day. Those of the dry- and wet-bulb thermometers are employed to correct the indications of the photographic dry- and wet-bulb thermometers.

PHOTOGRAPHIC DRY-BULB AND WET-BULB THERMOMETERS.—The apparatus which has been in use since 1887 was designed by Sir William Christie, and from 1899 to 1917 stood in the same position in the Magnet Ground. It was transferred to the Magnetic Pavilion Enclosure on 1917 February 21. It is placed in a shed 8 feet square, standing upon posts about 8 feet high, and open to the north. The apparatus is screened from the direct rays of the sun, without impeding the circulation of the air. The recording mechanism is similar in general plan to that already described in connection with the magnetometers. The traces consist of broad bands, due to the free passage of light to the drum, above the mercury column in the dry-bulb, and through an air-bubble in that of the wet-bulb, crossed by fine lines caused by the shadows of the graduations on the thermometer tubes. The two traces fall on the same part of the cylinder as regards time scale. The stems of the thermometers are placed close together, each being covered by a vertical metal plate having a fine vertical slit, so that light passes through only at such parts of the bore of the tube as do not contain mercury. Further details of the thermometers and recording arrangements may be found in the volume for 1912. The scale value of the records is approximately 10° per inch.

RADIATION THERMOMETERS.—These thermometers are placed in the Magnetic Pavilion enclosure, in an open position about 50 feet south-west of the building. The thermometer for solar radiation is a self-registering mercurial maximum thermometer on Negretti and Zambra's principle, with its bulb blackened, and the thermometer enclosed in a glass sphere from which the air has been exhausted. The thermometer employed was Negretti and Zambra, No. 165157. The thermometer for radiation to the sky was a self-registering spirit minimum thermometer, Negretti and Zambra, No. 165654. The thermometers are laid on short grass and freely exposed to the sky; they require no correction for index-error.

EARTH THERMOMETERS.—There are two thermometers now in use, the bulbs of which are sunk to depths of 4 and 1 feet below the surface. Both thermometers are read daily at noon, the readings of the longer being given in the daily results. The description of the deep sunk thermometers previously in use will be found in earlier volumes. A discussion by Professor Everett of the observations up to 1859 was given in an appendix to the volume for 1860.

OSLER'S ANEMOMETER.—This self-registering anemometer, devised by A. Follett Osler, for continuous registration of the direction and pressure of the wind and of the amount of rain, is fixed above the north-western turret of the ancient part of the observatory. The direction of the wind is registered by means of a large vane (9ft. 2in. in length), connected by gearing with a rack-work carrying a pencil; the latter marks on a flat horizontally moving sheet of paper. The vane is 25 feet above the roof of the Octagon Room, 60 feet above the adjacent ground, and 215 feet above the mean level of the sea. A fixed mark on the north-eastern turret, in a known azimuth, as determined by celestial observation, is used for examining at any time the position of the direction plate over the registering table, to which reference is made by means of a direction pointer when adjusting a new sheet on the travelling board.

A circular pressure plate with an area of 192 square inches is attached 2 feet below the vane; moving with the latter, it is always kept directed against the wind. A light wind causes the plate to compress slender springs, the motion being registered on the horizontal sheet by a pencil connected with the plate by a flexible brass chain, which is always in tension. Higher wind pressures bring stiffer

E xvi INTRODUCTION TO GREENWICH METEOROLOGICAL OBSERVATIONS, 1921.

springs into play behind the plate, and the two sets of springs are adjusted by screws and clamps so as to afford fixed scales on the sheet, the scale for light winds being double that for heavy winds. The scale is determined experimentally in lbs. per square foot from time to time.

The recording sheet is changed daily at noon. The time scale, ordinarily the same as that of the magnetic registers, can be increased 24-fold by altering the gearing.

A self-registering rain gauge of peculiar construction forms part of the apparatus; this is described under the heading "Rain Gauges" in previous volumes.

ROBINSON'S ANEMOMETER.—This instrument, for registration of the horizontal movement of the air, is mounted above the roof of the Octagon Room. It was brought into use in 1866, and is of smaller size than that now usual, the four hemispherical cups being 5 inches in diameter, the centre of each cup being 15 inches distant from the vertical axis of rotation. The cups are 21 feet above the roof of the Octagon Room, 56 feet above the adjacent ground, and 211 feet above the mean level of the sea. A motion of the recording pencil through 1 inch corresponds to horizontal motion of the air through 100 miles. The time scale is the same as for the magnetic registers, and the sheet is changed daily at noon.

In preceding volumes the values of wind velocity V given in the tables are three times the actual velocity v of the cups. From some tests of the Browning instrument, made by Mr. W. H. Dines at Hersham in 1889, on his whirling machine, it would appear that the relation between V and v is more correctly given by

$$V=4\cdot0+2\cdot0 v,$$

and that the instrument fails to record wind velocities less than 4 miles per hour. The values of the wind velocity given by the formula $V=3 v$ would thus be too high when V exceeds 12. Since the two formulæ agree, however, for $V=12$, the mean values of the wind velocity (which seldom differ much from 12) will be approximately correct in either case; therefore, for the sake of continuity and simplicity, the formula $V=3 v$ will continue to be used. In this volume, however, the greatest hourly measures (p. E 82) are given according to both formulæ, and the least hourly measures omitted.

RAIN GAUGES.—During the year 1921 three rain gauges were employed, placed at different elevations above the ground.

The gauge No. 1 forms part of the Osler Anemometer apparatus, and is self-registering, the record being made on the sheet on which the direction and pressure of the wind are recorded. The apparatus is fully described in earlier volumes.

Gauge No. 6 is an 8-inch circular gauge placed with the receiving surface 5 inches above the ground in the Magnetic Pavilion enclosure, about 10 feet northwest of the thermometer stand. No. 8 is a new gauge of the same diameter, but of the modified Snowdon pattern adopted by the Meteorological Office, having its receiving surface 1 foot above the ground. It was brought into use 1908 January 1, being fixed SW by W from No. 6 with a clear space of 6 feet between the rims. No. 6 is the Standard gauge, No. 8 is used as a check on the readings of No. 6. No. 6 is read daily, usually at 9^h, 15^h, and 21^h Greenwich civil time, and No. 8 at 9^h only as a rule.

The present height of the Standard gauge above mean sea-level is 5 feet 9 inches less than in its old position in the Observatory Grounds, before its removal to the Pavilion Enclosure.

The gauges are also read at midnight on the last day of each calendar month.

The monthly amounts of rain collected in gauges Nos. 6 and 8 are given on page E 80 of the Meteorological Results.

ELECTROMETER.—The electric potential of the atmosphere is measured by means of a Thomson self-recording quadrant electrometer, made by White, of Glasgow. It is situated in a small hut in the Magnetic Enclosure and has the usual arrangements for photographic registration. The time scale is the same as for the magnetic registers, the hourly break of trace being made by the driving-clock itself. The Electrometer is connected by a fine wire directly with a small radium collector, carried on an insulated support, at a height of about 7 feet.

SUNSHINE RECORDER.—The instrument in use is of the Campbell-Stokes pattern, with 4-inch glass globe. The recorded durations are those of *bright* sunshine, no register being obtained when the sun shines faintly through fog or cloud, or is very near the horizon. The hourly results relate to *apparent* time.

E xviii INTRODUCTION TO GREENWICH METEOROLOGICAL OBSERVATIONS, 1921.

NIGHT-SKY RECORDER.—The object of this instrument is to supplement the daily sunshine record, in so far as it gives an indication of the amount of cloud.

It consists of a small camera constructed of wood, mounted on a brick pier in the courtyard, to the north of the Transit Pavilion, and permanently directed towards the celestial Pole.

From 1921 January 1 a new and larger camera was in regular use. The lens is of 18·8 inches focal length and 0·8 inch aperture. The actual camera is enclosed in a larger box about twice its length, which extends nine inches beyond the lens. The lens itself is further surrounded by a hood. Adequate protection from dew is thus obtained and also from rain, except when driven hard from the north. The photographic plates used are ordinary quarter-plate ($3\frac{1}{4}$ inches by $4\frac{1}{4}$). Exposure is intended to be made during the period that the sun remains more than 10° below the horizon. The period thus centres approximately to apparent midnight, but in practice the mean times of commencing and ending the exposure are not varied at intervals of less than seven days.

The traces of Polaris and of δ Ursae Minoris are ordinarily selected for measurement. The measurement is effected by means of a glass scale, on which there are photographically imprinted pairs of concentric circles whose radii are slightly greater and slightly less than the radius of the trace to be measured, the circles being divided into a time scale of hour-angle, with ten-minute units. The plate is placed over the scale in a measuring frame, and adjusted so that the trace is concentric with the containing circles marked on the scale. The hour-angle of the star, according to the scale, at the commencement and ending of the various portions of the trace is then read off to the nearest minute of time.

The meridian setting of the instrument is occasionally checked on very fine nights by making a break in the exposure at a specified time. The correction for error of orientation of the plate is made during the computation of Mean Time corresponding to hour angle of star, in the following manner:—Whenever the sky is seen to be clear at the commencement of exposure, the difference between the hour angle given by the scale for the beginning of the trace and the corresponding mean time noted by the observer, is taken as the quantity to be applied to the scale readings throughout the night. When the sky is not clear, the last difference so obtained is used, due allowance being made for the daily acceleration of sidereal time over mean time. Variations in the error of orientation are found seldom to exceed two or three minutes of time, and are unimportant to the records.

§ 7. Meteorological Reductions.

The results given in the Meteorological Section refer to the civil day, commencing at midnight, except in the case of the Night Sky Recorder, for which they relate to the period from dusk on the day named, to dawn of the following day.

All results in regard to atmospheric pressure, temperature of the air and of evaporation with deductions therefrom, are derived from the photographic records, excepting that the maximum and minimum values of air temperature are those given by eye observation of the ordinary maximum and minimum thermometers at 9^h, 15^h, and 21^h (civil reckoning), reference being made, however, to the photographic register when necessary to obtain the values corresponding to the civil day from midnight to midnight. The hourly readings for the elements mentioned are measured direct from the photographic curves, and reduced so as to be based fundamentally, both as regards scale and zero, on the readings of the standard barometer and dry- and wet-bulb thermometers.

The barometer results are not reduced to sea-level, neither are they corrected for the effect of gravity, by reduction to the latitude of 45°.

The mean daily temperature of the dew-point and degree of humidity are deduced from the mean daily temperatures of the air and of evaporation by use of Glaisher's *Hygrometrical Tables*. The table of factors for this purpose may be found in the Introductions for 1910 and previous years.

In the same way the mean hourly values of the dew-point temperature and degree of humidity in each month (pages E 75 and E 76) have been calculated from the corresponding mean hourly values of air and evaporation temperatures (pages E 74 and E 75).

The excess of the mean temperature of the air on each day above the average of 65 years, given in the "Daily Results of the Meteorological Observations," is found by comparing the numbers contained in column 6 with a table of average daily temperatures found by smoothing the accidental irregularities of the daily means deduced from the observations for the sixty-five years 1841–1905. In this series the mean daily temperature from 1841 to 1847 depends usually on 12 observations daily, in 1848 on 6 observations daily, and from 1849 to 1905 on 24 hourly readings from the photographic record. The smoothed numbers are given in Table VII, *Reduction of the Greenwich Meteorological Observations*, Part IV, and also in the Introduction for 1910.

E xx INTRODUCTION TO GREENWICH METEOROLOGICAL OBSERVATIONS, 1921.

The daily register of rain contained in column 16 is that recorded by the gauge No. 6, whose receiving surface is 5 inches above the ground. This gauge is read at 9^h, 15^h, and 21^h Greenwich civil time. The continuous record of Osler's self-registering gauge shows whether the amounts measured at 9^h are to be placed to the same, or to the preceding civil day; and in cases in which rain fell both before and after midnight, also gives the means of ascertaining the proper proportion of the 9^h amount which should be placed to each civil day. The number of days of rain given in the footnotes, and in the abstract tables, pages E 73 and E 80, is formed from the records of this gauge. In this numeration only those days are counted on which the fall amounted to or exceeded 0.ⁱⁿ005.

The indications of atmospheric electricity are derived from Thomson's Electrometer.

No particular explanation of the anemometric results seems necessary. It may be understood generally that the greatest pressures usually occur in gusts of short duration. The "Mean of 24 Hourly Measures" was in former years the mean of 24 measures of pressure taken *at* each hour; but commencing with 1887 January 1, it is the mean of measures, each one of which is the average pressure during the hour of which the nominal hour is the middle point.

The mean amount of cloud given in the footnotes on the right-hand pages E 49 to E 71, and in the abstract table, page E 73, is the mean found from observations made at 9^h, 12^h (noon), 15^h, and 21^h of each civil day.

For understanding the divisions of time under the headings "Clouds and Weather" and "Electricity," the following remarks are necessary:—In regard to Clouds and Weather, the day is divided by columns into two parts (from midnight to noon, and from noon to midnight), and each of these parts is subdivided into two or three parts by colons (:). Thus, when there is a single colon in the first column, it denotes that the indications before it apply (roughly) to the interval from midnight to 6^h, and those following it to the interval from 6^h to noon. When there are two colons in the first column, it is to be understood that the twelve hours are divided into three nearly equal parts of four hours each. And similarly for the second column. In regard to Electricity, the results are included in one column; in this case the colons divide the whole period of 24 hours (midnight to midnight).

As regards the notation for clouds and weather, the following are the symbols which denote actual phenomena :—

a, <i>aurora</i>	h, <i>haze</i>	s, <i>stratus</i>
ci, <i>cirrus</i>	ha, <i>halo</i>	sc, <i>scud</i>
cl, <i>clouds</i>	hl, <i>hail</i>	sh, shs, <i>shower (s)</i>
co, <i>corona</i>	l, <i>lightning</i>	sl, <i>sleet</i>
cu, <i>cumulus</i>	m, <i>mist</i>	sm, <i>storm</i>
d, <i>dew</i>	n, <i>nimbus</i>	sn, <i>snow</i>
f, <i>fog</i>	prh, <i>parhelion</i>	sq, sqs, <i>squall (s)</i>
fr, <i>frost</i>	prs, <i>paraselene</i>	t, <i>thunder</i>
g, <i>gale</i>	r, <i>rain</i>	w, <i>wind</i>
glm, <i>gloom</i>		

The following are qualifying symbols used in conjunction with the above :—

c, <i>continued</i>	li, <i>light</i>	so, <i>solar</i>
fq, <i>frequent</i>	lu, <i>lunar</i>	st, <i>strong</i>
fr, <i>frozen</i>	m, <i>misty</i>	th, <i>thin</i>
gt, <i>great</i>	oc, <i>occasional</i>	tk, <i>thick</i>
ho, <i>hoar</i>	p-cl, <i>partially cloudy</i>	v, <i>variable</i>
hy, <i>heavy</i>	slt, <i>slight</i>	vv, <i>very variable</i>

These symbols are used in combination : thus c-hy-r denotes continued heavy rain ; t-sm, thunderstorm ; p-cl, partially cloudy ; m-r, misty rain ; and so on. In regard to clouds, cl is omitted when the type is specified : thus ci-cu denotes cirro-cumulus clouds.

Howard's nomenclature is used for clouds, and the figure indicates the proportion of sky covered by cloud, an overcast sky being represented by 10.

The following is the notation employed for electricity :—

N, <i>negative</i>	m, <i>moderate</i>	s, <i>strong</i>
P, <i>positive</i>	w, <i>weak</i>	v, <i>variable</i>
ss, <i>very strong</i>	ww, <i>very weak</i>	vv, <i>very variable</i>

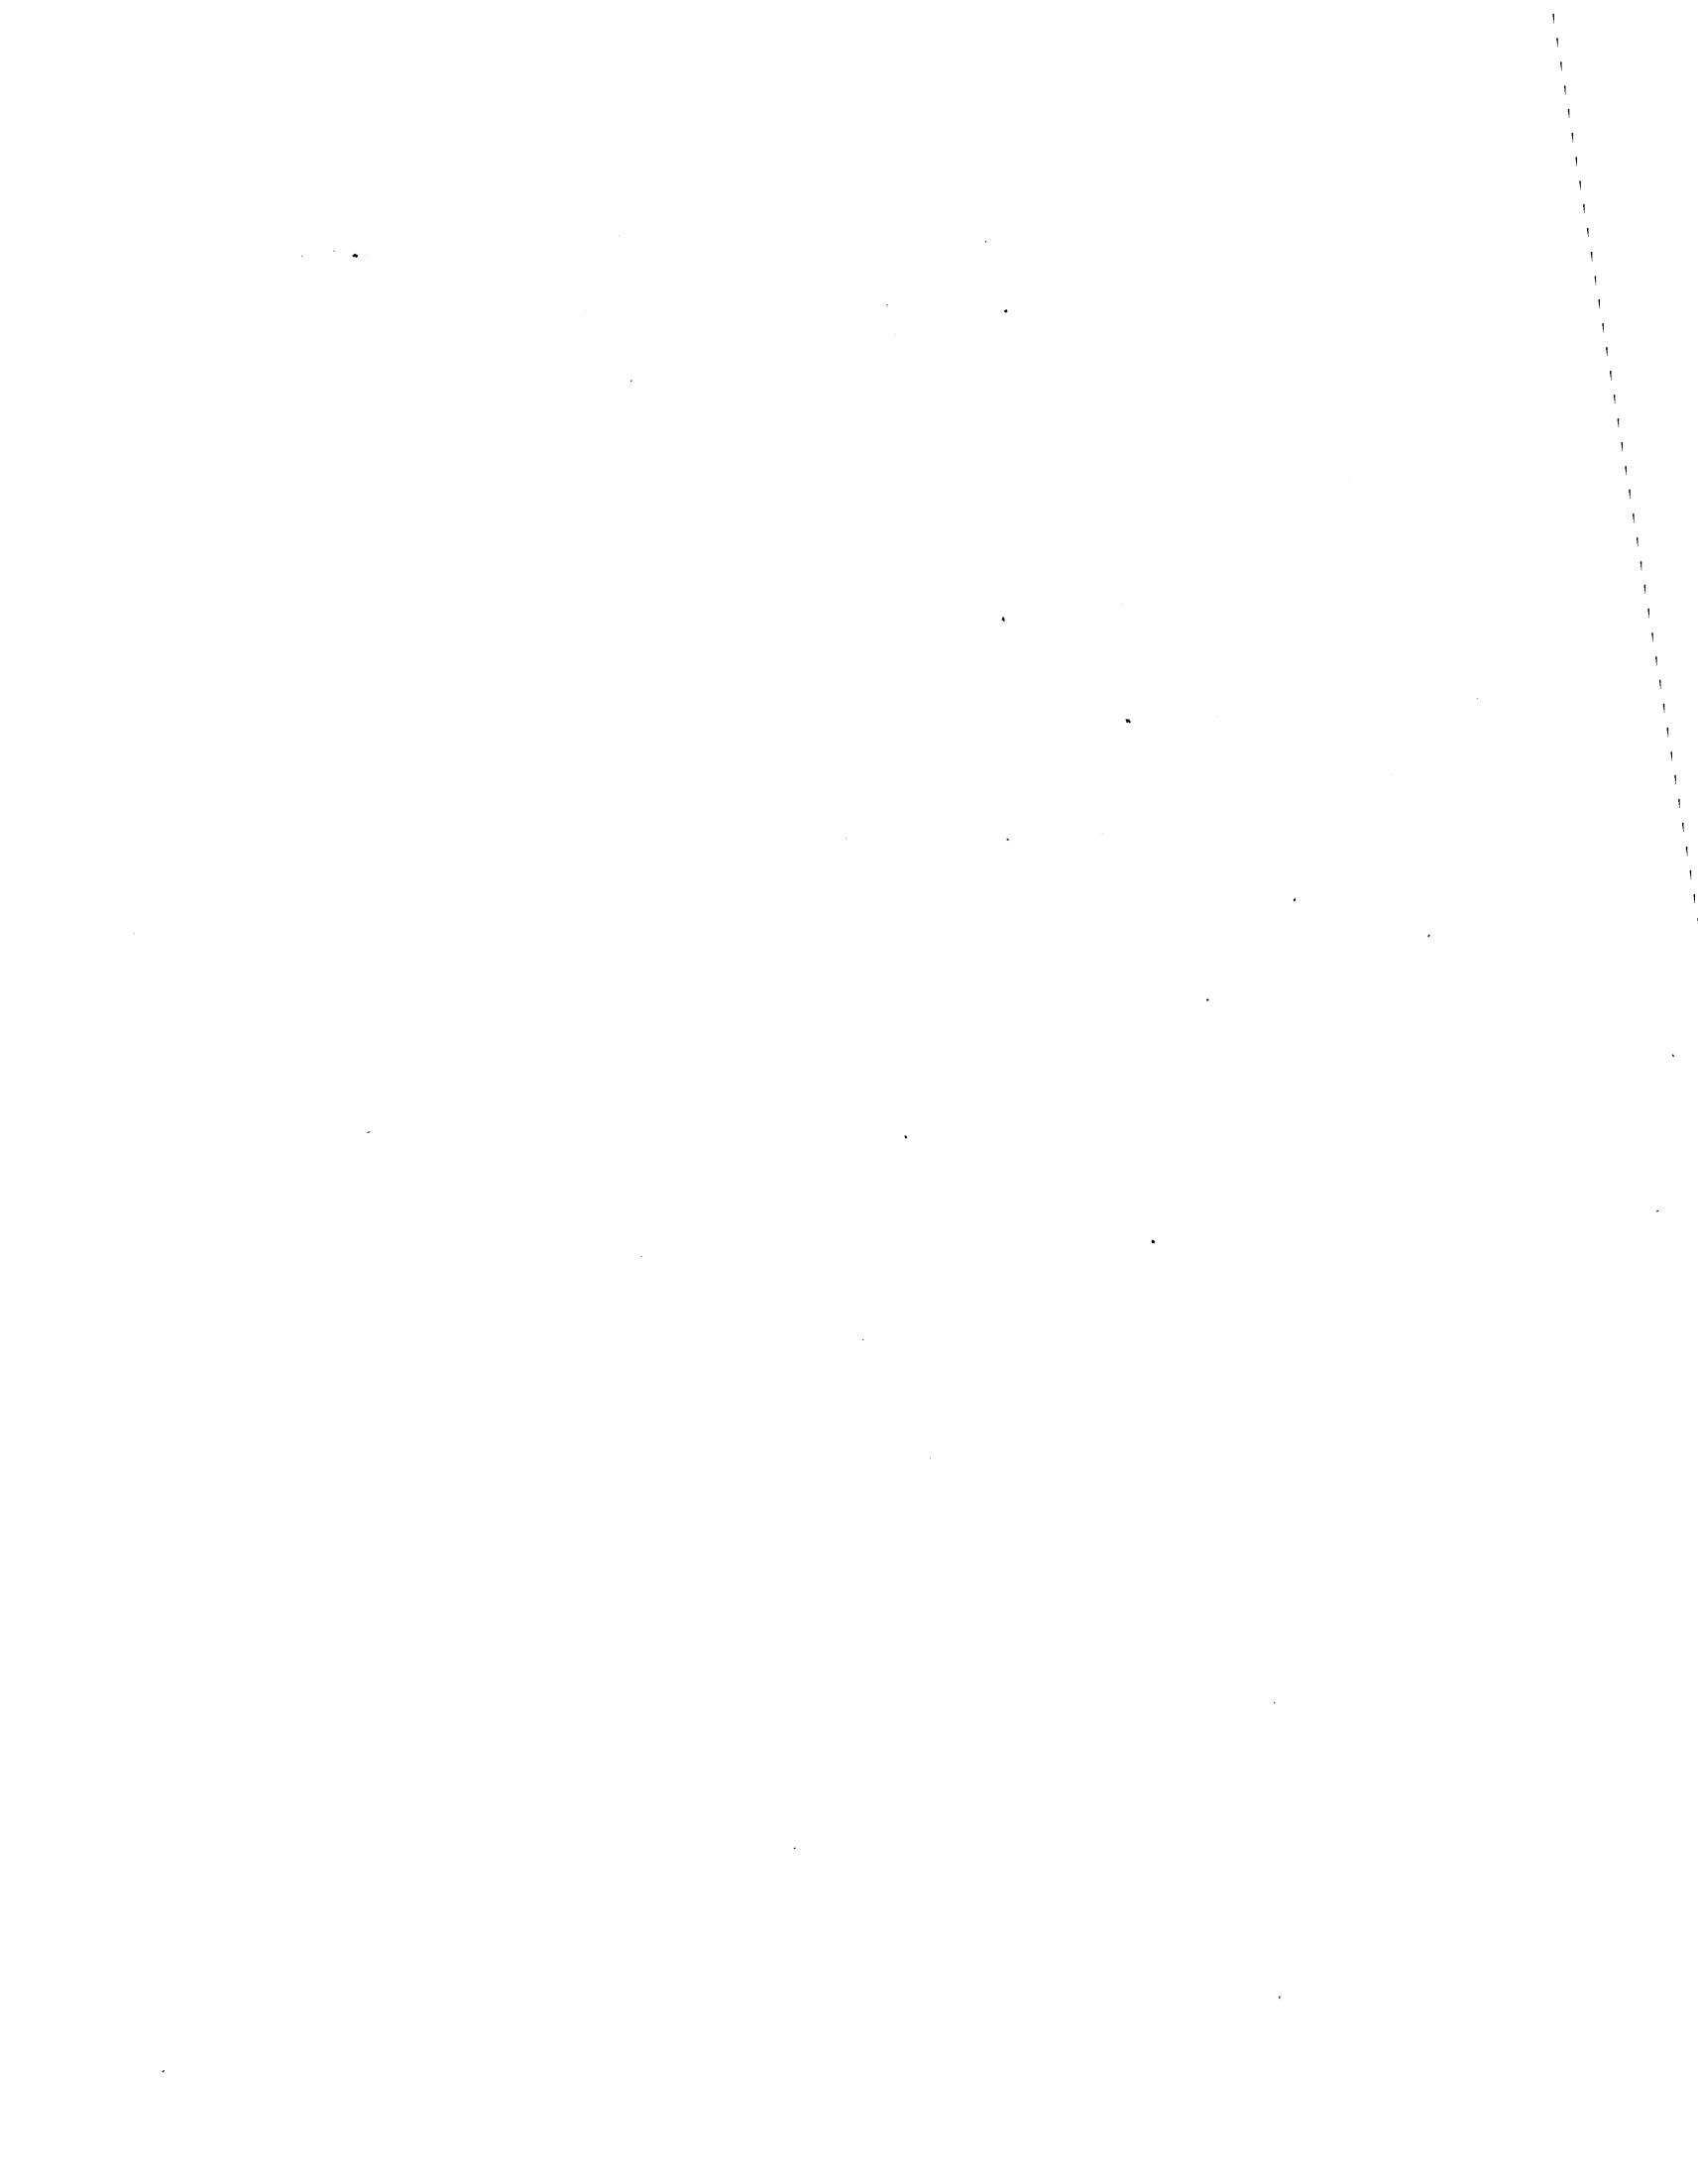

Zero potential is indicated by 0, and a dash (—) indicates accidental failure of the apparatus.

The mean of the twelve monthly values is 10·10.

TABLE VI.—MONTHLY and ANNUAL MEAN DIURNAL INEQUALITIES of MAGNETIC DECLINATION WEST from HOURLY ORDINATES, on FIVE SELECTED QUIET DAYS in each MONTH.

Each result is the mean of the corresponding hourly ordinates from the photographic registers, on five quiet days in each month, selected by the International Committee for comparison with results at other Observatories. The results in each case are diminished by the smallest hourly value. The days included are:—

January 2, 8, 13, 14, 22.
February 8, 9, 12, 16, 23.
March 5, 8, 17, 19, 20.

April 4, 5, 7, 26, 27.
May 5, 6, 7, 25, 30.
June 5, 15, 18, 19, 25.

July 2, 11, 18, 21, 25.
August 1, 9, 23, 25, 29.
September 11, 12, 13, 24, 25.

October 3, 16, 17, 18, 19.
November 2, 3, 4, 27, 29.
December 6, 7, 19, 20, 21.

TABLE VII.—MONTHLY and ANNUAL MEAN DIURNAL INEQUALITIES of MAGNETIC DECLINATION WEST from HOURLY ORDINATES, on SELECTED DISTURBED DAYS in each MONTH.

Each result is the mean of the corresponding hourly ordinates from the photographic registers, on disturbed days in each month, selected by the International Committee for comparison with results at other Observatories. The results in each case are diminished by the smallest hourly value. The days included are:—

January 1, 10, 17, 24, 31.
February 2, 5, 13, 19, 28.
March 15, 21, 22, 25, 27.

April 12, 13, 18, 29.
May 13, 14, 16, 20.
June 4, 6, 8, 14, 23.

July 7, 8, 9, 15, 16.
August 3, 5, 6, 26, 30.
September 2, 8, 23, 28, 29.

October 7, 8, 11, 12, 21.
November 6, 16, 18, 23.
December 12, 13, 16, 28, 29.

TABLE XV.—MONTHLY and ANNUAL MEAN DIURNAL INEQUALITIES of VERTICAL MAGNETIC FORCE from HOURLY ORDINATES, on SELECTED DISTURBED DAYS in each MONTH.

Each result is the mean of the corresponding hourly ordinates from the photographic registers, on disturbed days in each month, selected by the International Committee for comparison with results at other Observatories. The results in each case are diminished by the smallest hourly value. The days included are:—

January 1, 10, 17, 31.
February 2, 5, 13, 19, 28.

April 12, 13, 20.
May 13, 14, 16, 20.
June 4, 6, 8, 14, 23.

July 7, 8, 9, 15, 16.
August 3, 5, 6, 26, 30.
September 2, 8, 23, 28, 29.

October 7, 8, 11, 12, 21.
November 6, 16, 18, 23.
December 12, 13, 16, 28, 29.

1921.

* Omitting the month of March.

TABLE XVI.—VALUES of the COEFFICIENTS and PHASE ANGLES in the PERIODICAL EXPRESSION

$$V_t = m + a_1 \cos t + b_1 \sin t + a_2 \cos 2t + b_2 \sin 2t + a_3 \cos 3t + b_3 \sin 3t + a_4 \cos 4t + b_4 \sin 4t$$

$$= m + c_1 \sin(t + \alpha_1) + c_2 \sin(2t + \alpha_2) + c_3 \sin(3t + \alpha_3) + c_4 \sin(4t + \alpha_4),$$

in which t represents the time from Greenwich mean midnight converted into arc at the rate of 15° to each hour, and V_t the annual or monthly mean hourly value of the magnetic element at time t , as given in Tables IV, VIII and XII.

The coefficients, a , b , c , are given in units of 1γ (0.00001 C.G.S. units) for N.F. and V.F. and in minutes of arc ($1' = 5.37 \gamma$) for Declination.

If the inequalities are expressed relative to time reckoned from apparent midnight, the new phase angles $\alpha'_1, \alpha'_2, \alpha'_3, \alpha'_4$ may be obtained from $\alpha_1, \alpha_2, \alpha_3, \alpha_4$ by adding respectively, $\alpha, 2\alpha, 3\alpha, 4\alpha$, the value of α for each month being as follows:—

Jan.	$+ 2^\circ.19'$	April	$+ 0^\circ.4'$	July	$+ 1^\circ.21'$	Oct.	$- 3^\circ.28'$
Feb.	$+ 3^\circ.29'$	May	$- 0^\circ.52'$	Aug.	$+ 0^\circ.59'$	Nov.	$- 3^\circ.47'$
Mar.	$+ 2^\circ.12'$	June	$+ 0^\circ.4'$	Sept.	$- 1^\circ.11'$	Dec.	$- 1^\circ.6'$

Month, 1921.	a_1	b_1	a_2	b_2	a_3	b_3	a_4	b_4	c_1	α_1	c_2	α_2	c_3	α_3	c_4	α_4

* Mean value of Vertical Force for the period March 1–10.

† Mean value of Vertical Force for the period April 11–30.

ROYAL OBSERVATORY, GREENWICH.

MAGNETIC DISTURBANCES.

1921.

MAGNETIC DISTURBANCES in DECLINATION, NORTH FORCE, and VERTICAL FORCE,
recorded at the ROYAL OBSERVATORY, GREENWICH, in the Year 1921.

The following notes give a brief description of all magnetic movements (superposed on the ordinary diurnal movement) exceeding $3'$ in Declination, 20γ in North Force, or 12γ in Vertical Force, as taken from the photographic records of the respective Magnetometers. The movements in North and Vertical Force are expressed in C. G. S. units. When any one of the three elements is not specifically mentioned, it is to be understood that the movement, if any, was insignificant. Any failure or want of register is specially indicated.

The term "wave" is used to indicate a movement in one direction and return; "double wave" a movement in one direction and return with continuation in the opposite direction and return; "two successive waves" consecutive wave movement in the same direction; "oscillations" a number of movements in both directions. The extent and direction of the movement are indicated in brackets, + denoting an increase, and - a decrease of the magnetic element. In the case of oscillations the sign \pm denotes positive and negative movements of generally equal extent.

Magnetic movements which do not admit of brief description in this way are exhibited on accompanying plates.

The time is Greenwich Civil Time (commencing at midnight, and counting the hours from 0 to 24).

- 1921.
- | | |
|---------|--|
| January | 1 ^d 7 ^h to 8 $\frac{1}{4}$ ^h Wave in N.F. (- 30). 14 $\frac{1}{2}$ ^h to 15 $\frac{1}{3}$ ^h Domed wave in N.F. (- 25). 14 $\frac{2}{3}$ ^h to 15 $\frac{1}{4}$ ^h Decrease in Dec. (- 4'). 20 $\frac{1}{3}$ ^h to 22 ^h Double wave in Dec. (+ 3', - 5'). 21 ^h to 22 $\frac{1}{2}$ ^h Wave in N.F. (+ 45). |
| | 4 ^d 1 $\frac{1}{2}$ ^h to 3 $\frac{1}{2}$ ^h Double wave in Dec. (\pm 3'). 14 ^h to 14 $\frac{2}{3}$ ^h Truncated wave in N.F. (+ 20). 16 ^h to 16 $\frac{2}{3}$ ^h Wave in Dec. (- 3'). 16 ^h to 18 $\frac{1}{3}$ ^h Two successive waves in N.F. (+ 20). 18 $\frac{1}{2}$ ^h to 19 $\frac{1}{2}$ ^h Increase in N.F. (+ 30). |
| | 5 ^d 14 ^h to 15 ^h Increase in N.F. (+ 30). 18 $\frac{1}{3}$ ^h to 19 $\frac{1}{3}$ ^h Wave in Dec. (- 3'). |
| | 7 ^d 20 ^h to 21 $\frac{2}{3}$ ^h Two consecutive waves in Dec., the second wave truncated (- 4', - 5'). |
| | 9 ^d 11 $\frac{1}{2}$ ^h to 12 $\frac{3}{4}$ ^h Serrated wave in Dec. (+ 3'). 17 ^h to 19 $\frac{1}{2}$ ^h Irregular decrease in Dec. (- 8'). 19 $\frac{1}{2}$ ^h to 21 ^h Sharp wave in Dec., the return steep at first (- 10'). 19 $\frac{2}{3}$ ^h to 21 ^h Wave in N.F. (+ 40). |
| | 10 ^d 0 $\frac{1}{3}$ ^h to 2 ^h Double wave in Dec. (\mp 3'). 0 $\frac{1}{4}$ ^h to 1 $\frac{1}{2}$ ^h Wave in N.F. (+ 20). 12 $\frac{3}{4}$ ^h to 14 ^h Domed serrated wave in Dec. (+ 5'). 21 ^h to 23 ^h Double wave in N.F. (- 25, + 45). 21 ^h to 22 $\frac{3}{4}$ ^h Wave in Dec. (- 12'). |
| | 11 ^d 23 $\frac{1}{2}$ ^h to 12 ^d 2 ^h Two consecutive truncated waves in Dec. (- 4', - 3'). 23 $\frac{3}{4}$ ^h to 12 ^d 1 ^h Wave in N.F. (+ 35), the return interrupted at 0 $\frac{1}{2}$ ^h . |
| | 14 ^d 19 ^h to 20 ^h Serrated wave in Dec. (- 3'). |
| | 15 ^d 12 $\frac{1}{3}$ ^h to 14 ^h Irregular wave in Dec. (+ 5'). 13 $\frac{1}{2}$ ^h to 14 $\frac{1}{2}$ ^h Increase in N.F. (+ 35). 21 $\frac{3}{4}$ ^h to 23 ^h Double wave in Dec. (+ 4', - 7'), the middle portion very steep. 22 $\frac{1}{3}$ ^h to 23 ^h Wave in N.F. (+ 25). |
| | 16 ^d 22 ^h to 23 ^h Wave in Dec. (- 7'). |
| | 17 ^d 7 $\frac{3}{4}$ ^h to 9 $\frac{1}{2}$ ^h Steady decrease in N.F. (- 50). 9 ^h to 10 $\frac{1}{2}$ ^h Steady increase in Dec. (+ 7'). 11 $\frac{1}{2}$ ^h to 13 ^h Truncated wave in Dec. (+ 4'). 16 ^h to 17 ^h Irregular increase in Dec. (+ 7'). 16 $\frac{3}{4}$ ^h to 17 ^h Sharp decrease in N.F. (- 30). 17 ^h to 19 ^h Increase in V.F. (+ 40), partially returning till 20 ^h (- 16). 17 ^h to 18 ^h Irregular decrease in Dec. (- 8'). 18 ^h to 18 $\frac{1}{2}$ ^h Very sharp wave in N.F. (- 35). 18 $\frac{1}{4}$ ^h to 19 $\frac{1}{2}$ ^h Serrated wave in Dec. (- 10'). 19 $\frac{1}{2}$ ^h to 21 $\frac{1}{3}$ ^h Two consecutive serrated waves in N.F., the second truncated (+ 25), with several sharp oscillations superposed. 20 $\frac{1}{2}$ ^h to 21 $\frac{1}{2}$ ^h Wave in Dec. (- 4'). 22 $\frac{3}{4}$ ^h to 23 ^h Sharp increase in N.F. (+ 20). 22 $\frac{2}{3}$ ^h to 23 $\frac{1}{2}$ ^h Domed wave in Dec. (- 4'). |
| | 18 ^d 19 $\frac{2}{3}$ ^h to 20 $\frac{1}{2}$ ^h Wave in Dec. (- 4'). |
| | 19 ^d 19 $\frac{1}{2}$ ^h to 21 $\frac{1}{2}$ ^h Three consecutive waves in Dec. (- 3'). |
| | 20 ^d 11 $\frac{3}{4}$ ^h to 13 ^h and 14 $\frac{1}{2}$ ^h to 16 $\frac{2}{3}$ ^h No register of traces, during the erection of the new V.F. variometer. 22 ^h to 23 $\frac{1}{2}$ ^h Irregular wave in Dec. (- 17'), the first part very steep. 22 $\frac{1}{4}$ ^h to 23 $\frac{3}{4}$ ^h Wave in N.F. (+ 30). |
| | 21 ^d 5 ^h to 6 $\frac{1}{2}$ ^h Wave in N.F. (- 20). 5 $\frac{1}{4}$ ^h to 6 $\frac{1}{2}$ ^h Wave in Dec. (+ 4'). 19 $\frac{1}{2}$ ^h to 21 ^h Slow wave in N.F. (- 20). |
| | 23 ^d 2 ^h to 4 $\frac{1}{2}$ ^h Broad truncated wave in Dec. (- 3'). 20 $\frac{1}{2}$ ^h to 21 $\frac{1}{2}$ ^h Wave in Dec. (- 3'). |
| | 24 ^d 3 $\frac{1}{4}$ ^h to 6 ^h Two consecutive waves in N.F. (- 30, - 25). 3 $\frac{1}{2}$ ^h to 6 ^h Two consecutive waves in Dec. (+ 7', + 3'). |

- 1921.
- January**
- 24^d 13^h to 27^d 12^h Experiments for temperature adjustment of the V.F. variometer were in progress and the V.F. records are rejected.
- 25^d 21¹_{4^h to 22¹₄^h Wave in Dec. (- 3'). 23¹₂^h to 26^d 1¹₄^h Wave in Dec. (+ 5').}
- 26^d 11¹₂^h to 13^h No register of any trace.
- 29^d 2^h to 3¹₄^h Wave in Dec. (+ 4').
- 30^d 23¹₂^h to 31^d 0¹₄^h Wave in N.F. (+ 20).
- 31^d 17¹₂^h to 20^h Wave in V.F. (+ 18). 17¹₂^h to 19^h Double-crested wave in Dec. (- 7', - 5'). 17¹₂^h to 18¹₂^h Two consecutive waves in N.F. (- 35, - 20).
- February**
- 1^d 18¹₄^h to 20¹₂^h Irregular wave in Dec. (- 10'), with a secondary wave superposed from 19¹₄^h to 19³₄^h (+ 4'). 18³₄^h to 20^h Serrated wave in N.F. (+ 40), very steep at first.
- 2^d 7¹₃^h to 8¹₂^h Decrease in N.F. (- 35). 11¹₃^h to 13^h Truncated wave in Dec. (- 3'). 17¹₂^h to 18¹₄^h Irregular increase in N.F. (+ 40). 18^h to 19¹₂^h Serrated wave in Dec. (- 9').
- 3^d 0¹₂^h to 1¹₃^h Wave in Dec. (- 4'). 22¹₂^h to 23^h Wave in Dec. (- 3').
- 4^d 19¹₂^h to 20¹₂^h Wave in Dec. (- 5').
- 5^d 10¹₃^h to 11¹₄^h Irregular wave in N.F. (- 25). 10³₄^h to 12¹₄^h Increase in Dec. (+ 7'). 16^h to 17^h Wave in Dec. (- 4'). 15¹₄^h to 16¹₂^h Decrease in N.F. (- 30), followed till 18¹₂^h by steady increase (+ 40). 20²₃^h to 21¹₃^h Truncated wave in N.F. (+ 20). 21¹₃^h to 24^h Slow wave in Dec. (+ 7'). 22¹₂^h to 23¹₃^h Rapid increase in N.F. (+ 45), partially returning till 23¹₃^h (- 20), and followed immediately till 6^d 1^h by a further wave (+ 50). 23^h to 6^d 0¹₂^h Rapid decrease in V.F. (- 36).
- 6^d 0¹₂^h to 1^h Wave in Dec. (+ 5'). 1^h to 3¹₄^h Rapid increase in Dec. (+ 15'), followed till 4¹₂^h by steady decrease (- 5'). 1^h to 1¹₂^h Increase in V.F. (+ 12). 16¹₂^h to 17¹₂^h Irregular decrease in Dec. (- 7'), rapid towards the end. 17¹₂^h to 18¹₄^h Steady increase in Dec. (+ 5'). 17¹₂^h to 17¹₂^h Very rapid increase in N.F. (+ 20).
- 7^d 16¹₂^h to 17¹₂^h Wave in Dec. (- 3').
- 10^d 23³₄^h to 11^d 0¹₂^h Wave in Dec. (+ 5').
- 13^d 15^h to 17^h Wave in N.F. (- 25). 17¹₂^h to 18¹₂^h Wave in N.F. (- 20). 17¹₂^h to 19^h Wave in Dec. (- 3'). 20¹₂^h to 21^h Decrease in Dec. (- 6'), followed immediately from 21^h to 22¹₂^h by a double wave (\pm 5'). 21^h to 22¹₂^h Double wave in N.F. (+ 40, - 20), very steep at beginning. 20³₄^h to 22¹₂^h Double wave in V.F. (\pm 12), the second part truncated. 22¹₂^h to 23¹₃^h Irregular wave in Dec. (- 3').
- 14^d 0^h to 1^h Sharp irregular wave in Dec. (+ 4'), accompanied by increase in N.F. (+ 25) with partial return. 2^h to 4¹₂^h Double wave in Dec. (+ 7, - 5'), the first part sharp, the second domed. 2¹₂^h to 4^h Truncated wave in N.F. (+ 30). 2¹₂^h to 3^h Rapid decrease in V.F. (- 20). 22¹₂^h to 15^d 0¹₃^h Decrease in Dec. (- 6'), with small superposed wave at 23¹₂^h to 24^h (+ 2'). 23¹₂^h to 15^d 0¹₂^h Irregular wave in N.F. (+ 20).
- 17^d 3¹₂^h Sudden increase in Dec. (+ 3'), followed immediately by rapid decrease till 4¹₂^h (- 6'), and accompanied by a sudden increase in N.F. (+ 20), and rapid decrease in V.F. (- 12).
- 18^d 17²₃^h to 19^h Serrated wave in Dec. (- 5').
- 19^d 1¹₂^h to 3^h Irregular truncated wave in N.F. (+ 20). 1¹₂^h to 2¹₂^h Decrease in V.F. (- 14), partially recovering till 3^h. 2^h to 3¹₄^h Wave in Dec. (- 4'). 1³₄^h to 14¹₂^h Truncated wave in N.F., steep at first (- 20). 15³₄^h to 17¹₂^h Numerous small oscillations in Dec. and N.F.
- 20^d 12¹₃^h to 12¹₄^h Sharp wave in Dec. (+ 3'). 23³₄^h to 21^d 1^h Wave in Dec. (- 6'), accompanied by truncated wave in N.F. (+ 40).
- 21^d 0^h to 1¹₂^h Decrease in V.F. (- 12). 1^h to 2¹₂^h Wave in Dec. (- 4').
- 22^d 21^h to 22¹₂^h Wave in Dec. (- 4').
- 24^d 23³₄^h to 25^d 0³₄^h Wave in Dec. (- 3').
- 25^d 11^h to 12¹₄^h Increase in Dec. (+ 6'). 19¹₂^h to 22^h Slow truncated wave in Dec. (- 4').
- 26^d 18¹₄^h to 19¹₂^h Wave in Dec. (- 4'), followed immediately till 20¹₂^h by a second wave (- 5'). 18¹₄^h to 18³₄^h Decrease in N.F. (- 20), partially recovering till 19^h.
- 28^d 2¹₂^h to 3¹₃^h Wave in Dec. (+ 5'). 11¹₂^h to 12^h Increase in Dec. (+ 3'). 13¹₄^h to 13¹₂^h Sharp wave in Dec. (+ 3'). 21^h to 21¹₂^h Decrease in Dec. (- 4'). 22¹₂^h to 22³₄^h Decrease in N.F. (- 20), followed immediately till 23¹₃^h by a wave (+ 30). 23^h to 24^h Wave in Dec. (- 3').

1921.

March

1^d 11 $\frac{1}{2}$ ^h to 13 $\frac{1}{2}$ ^h Irregular serrated wave in Dec. (+ 5'). 12 $\frac{3}{4}$ ^h to 14 $\frac{1}{4}$ ^h Wave in N.F. (- 20). 20^h to 21 $\frac{1}{4}$ ^h Sharp wave in Dec. (- 10'). 19 $\frac{3}{4}$ ^h to 21 $\frac{1}{2}$ ^h Double-crested wave in N.F. (- 30). 20^h to 22^h Wave in V.F. (+ 20).

2^d 3^h to 4^h Domed wave in Dec. (+ 5'). 4 $\frac{1}{2}$ ^h to 5^h Decrease in Dec. (- 3'). 13^h to 16^h Slow wave in N.F. (- 30). 22 $\frac{1}{2}$ ^h to 23 $\frac{1}{2}$ ^h Wave in Dec. (- 3'). 23 $\frac{3}{4}$ ^h to 24^h Rapid increase in N.F. (+ 20).

3^d 0^h to 2^h Two consecutive domed waves in Dec. (- 3'). 22 $\frac{1}{2}$ ^h to 24^h Wave in N.F. (+ 20).

5^d 22 $\frac{3}{4}$ ^h to 24^h Wave in Dec. (- 3').

6^d 13^h to 15 $\frac{1}{2}$ ^h Increase in V.F. (+ 16).

7^d 10 $\frac{1}{2}$ ^h to 13^h Steady increase in Dec. (+ 6'). 20 $\frac{1}{4}$ ^h to 21^h Wave in Dec. (- 3'). 21^h to 22^h Wave in Dec. (- 3'). 20 $\frac{3}{4}$ ^h to 21 $\frac{1}{4}$ ^h Increase in N.F. (+ 25).

9^d 19^h to 20^h Wave in Dec. (- 3'). 20^h to 21^h Wave in N.F. (- 30). 22 $\frac{1}{2}$ ^h to 10^d 0 $\frac{1}{4}$ ^h Wave in Dec. (- 11'). 23^h to 24^h Wave in N.F. (+ 35).

10^d 0^h to 1 $\frac{1}{2}$ ^h Wave in N.F. (+ 35). 0 $\frac{3}{4}$ ^h to 1 $\frac{1}{2}$ ^h Increase in Dec. (+ 5'). 0 $\frac{1}{2}$ ^h to 0 $\frac{3}{4}$ ^h Decrease in V.F. (- 12). 0 $\frac{3}{4}$ ^h Sharp deviation in V.F. (+ 12) lasting about 4 minutes. 2^h to 3^h Sharp wave in Dec. (+ 10'). 2^h to 4^h Wave in N.F. (+ 40). 2 $\frac{3}{4}$ ^h to 2 $\frac{1}{4}$ ^h Rapid decrease in V.F. (- 22), steadily recovering till 5^h. 9 $\frac{1}{2}$ ^h to 9 $\frac{3}{4}$ ^h Sharp wave in Dec. (+ 4'), accompanied by a similar wave in N.F. (+ 25). 12 $\frac{1}{2}$ ^h to 16^h Steady increase in V.F. (+ 25).

11^d 10^h to 12 $\frac{1}{2}$ ^h Increase in Dec. (+ 8'). 23 $\frac{3}{4}$ ^h to 12^d 0 $\frac{1}{4}$ ^h Decrease in N.F. (- 20).

March 11^d 11 $\frac{1}{2}$ ^h The new vertical force instrument was set up. Experiments for temperature adjustments, etc., were in progress until April 7^d 17^h at which date continuous V.F. records were resumed.

12^d 14 $\frac{3}{4}$ ^h Sudden decrease in Dec. (- 3'). 17 $\frac{1}{2}$ ^h to 18 $\frac{1}{4}$ ^h Wave in N.F. (- 20).

14^d 21 $\frac{1}{2}$ ^h to 22^h Wave in Dec. (+ 3'), followed immediately till 23 $\frac{1}{4}$ ^h by a further wave (- 10'). 22^h to 23^h Wave in N.F. (+ 50).

15^d 5 $\frac{1}{2}$ ^h to 7^h Wave in N.F. (- 30). 6 $\frac{1}{4}$ ^h to 7 $\frac{1}{2}$ ^h Truncated wave in Dec. (+ 4'). 8^h to 10^h Decrease in N.F. (- 70). 9^h to 10^h Increase in Dec. (+ 5'). 11 $\frac{1}{2}$ ^h to 12 $\frac{1}{2}$ ^h Increase in Dec. (+ 4'). 17 $\frac{1}{2}$ ^h to 19^h Wave in Dec. (+ 4'), followed immediately till 19 $\frac{1}{4}$ ^h by a rapid increase (+ 5'). 19^h to 20^h Wave in N.F. (- 35), the increase continuing till 20 $\frac{1}{4}$ ^h (+ 20). 19 $\frac{1}{4}$ ^h to 20 $\frac{1}{2}$ ^h Rapid irregular decrease in Dec. (- 13'), followed till 22^h by a general increase (+ 6') with irregular fluctuations, the largest a wave (+ 3').

16^d 3^h to 4 $\frac{1}{2}$ ^h Sharp serrated wave in Dec. (+ 8'). 2 $\frac{3}{4}$ ^h to 4 $\frac{1}{2}$ ^h Double wave in N.F. (- 20, + 30), the first part truncated. 4 $\frac{3}{4}$ ^h to 5 $\frac{1}{2}$ ^h Wave in N.F. (- 20). 5 $\frac{1}{2}$ ^h to 6 $\frac{1}{4}$ ^h Increase in Dec. (+ 7'). 6^h to 6 $\frac{1}{2}$ ^h Decrease in N.F. (- 25). 8^h to 8 $\frac{1}{2}$ ^h Decrease in Dec. (- 3'). 10 $\frac{1}{2}$ ^h to 13^h and 14 $\frac{1}{2}$ ^h to 15 $\frac{1}{4}$ ^h. No register of Dec. and N.F.

21^d 10^h to 13^h Steady increase in Dec. (+ 13'). 15 $\frac{1}{2}$ ^h Sudden increase in Dec. (+ 5'), accompanied by a similar increase in N.F. (+ 30). 16 $\frac{1}{4}$ ^h Small increase in N.F. (+ 15), followed till 17^h by a rapid irregular decrease (- 75). 16 $\frac{1}{4}$ ^h to 17 $\frac{1}{2}$ ^h Numerous small fluctuations in Dec., culminating in a rapid oscillating decrease till 18 $\frac{1}{4}$ ^h (- 12'), with a wave superposed at 17 $\frac{1}{2}$ ^h to 18^h (+ 4'). 17 $\frac{1}{2}$ ^h to 18^h Serrated wave in N.F. (+ 25), followed immediately till 18 $\frac{1}{2}$ ^h by a rapid increase (+ 35). 19^h to 19 $\frac{1}{4}$ ^h Wave in N.F. (+ 20).

22^d 0 $\frac{1}{2}$ ^h to 1^h Wave in Dec. (- 5'). 0 $\frac{3}{4}$ ^h to 0 $\frac{1}{4}$ ^h Wave in N.F. (+ 20). 4^h to 5^h Wave in Dec. (+ 8'). 4^h to 5 $\frac{1}{2}$ ^h Double wave in N.F. (- 20), followed, after a small increase till 6^h, by a steady decrease till 8^h (- 65). 5^h to 6^h Truncated wave in Dec. (+ 3'). 6 $\frac{3}{4}$ ^h to 8^h Irregular serrated wave in Dec. (- 5'). 11^h to 13^h Loss of register in Dec. and N.F. 13 $\frac{1}{2}$ ^h to 14^h Decrease in Dec. (- 5'). 14^h to 14 $\frac{1}{2}$ ^h Increase in N.F. (+ 30). 14 $\frac{1}{2}$ ^h to 15 $\frac{1}{2}$ ^h Very sharp wave in N.F. (+ 45). 14 $\frac{1}{2}$ ^h to 15 $\frac{1}{4}$ ^h Sharp wave in Dec. (+ 5'), sudden at the beginning. 20 $\frac{1}{2}$ ^h to 21 $\frac{1}{2}$ ^h Irregular wave in Dec. (- 4').

24^d 18 $\frac{1}{4}$ ^h to 19 $\frac{1}{4}$ ^h Rapid decrease in Dec. (- 6'). 20 $\frac{1}{4}$ ^h to 22^h Domed wave in Dec. (- 7').

25^d 2 $\frac{1}{2}$ ^h to 3 $\frac{1}{2}$ ^h Wave in Dec. (+ 5'). 4^h to 5 $\frac{1}{2}$ ^h Domed wave in N.F. (+ 20). 5 $\frac{1}{2}$ ^h to 6 $\frac{1}{2}$ ^h Wave in Dec. (+ 5'). 10 $\frac{1}{2}$ ^h to 13^h Irregular increase in Dec. (+ 10'). 12^h to 14^h Irregular double wave in N.F. (- 20). 20 $\frac{1}{2}$ ^h to 22 $\frac{1}{4}$ ^h Truncated wave in Dec. (- 10'), with additional wave superposed from 21^h to 21 $\frac{1}{2}$ ^h (- 5'). 20 $\frac{1}{2}$ ^h to 22 $\frac{1}{2}$ ^h Double wave in N.F. (+ 50, - 30). 22 $\frac{1}{2}$ ^h to 22 $\frac{1}{4}$ ^h Very rapid decrease in Dec. (- 16), irregularly recovering till 26^d 1^h. 22 $\frac{1}{2}$ ^h to 23 $\frac{1}{4}$ ^h Wave in N.F. (+ 30).

26^d 2 $\frac{1}{2}$ ^h to 3 $\frac{1}{2}$ ^h Wave in Dec. (+ 5'). 6 $\frac{1}{2}$ ^h to 8 $\frac{1}{2}$ ^h Decrease in N.F. (- 35). 11 $\frac{1}{2}$ ^h to 12 $\frac{1}{2}$ ^h Double crested wave in N.F. (- 25). 12 $\frac{1}{2}$ ^h Very rapid increase in Dec. (+ 4'). 13 $\frac{1}{2}$ ^h to 15 $\frac{1}{2}$ ^h Serrated wave in N.F. (- 35). 21 $\frac{1}{2}$ ^h to 22^h No register of Dec. and N.F. 22 $\frac{1}{2}$ ^h to 27^d 0 $\frac{1}{4}$ ^h Two consecutive waves in N.F. (+ 35, + 50). 22 $\frac{1}{2}$ ^h to 27^d 0 $\frac{1}{4}$ ^h Two consecutive waves in Dec., both truncated (- 5', - 6').

27^d 9 $\frac{1}{2}$ ^h to 10 $\frac{1}{4}$ ^h Increase in Dec. (+ 4'). 11^h to 13^h Increase in Dec. (+ 8'). 13^h to 13 $\frac{1}{2}$ ^h Domed wave in N.F. (- 20). 17^h to 18 $\frac{1}{2}$ ^h Serrated double wave in N.F. (- 20). 17^h to 18^h Decrease in Dec. (- 8'), followed till 19 $\frac{1}{4}$ ^h by irregular increase (+ 5'). 19 $\frac{1}{2}$ ^h to 21^h Double-crested wave in N.F. (+ 55, + 100). followed immediately till 21 $\frac{1}{2}$ ^h by a further wave (+ 20). 19 $\frac{1}{2}$ ^h to 21 $\frac{1}{4}$ ^h Three consecutive waves in Dec, (- 7', - 12' - 8').

- 1921.**
- March**
- 28^d 2 $\frac{1}{4}$ ^h to 3^h Wave in Dec. (+ 3'). 10^h to 12^h General increase in Dec. (+ 11').
 - 29^d 0^h to 0 $\frac{3}{4}$ ^h Irregular wave in Dec. (+ 5'). 0^h Very rapid increase in N.F. (+ 20). 1 $\frac{1}{2}$ ^h to 3^h Wave in Dec. (+ 10'). 2^h to 3 $\frac{1}{4}$ ^h Truncated wave in N.F. (+ 30). 4 $\frac{1}{2}$ ^h to 5 $\frac{1}{2}$ ^h Wave in N.F. (+ 20). 8 $\frac{1}{2}$ ^h to 10 $\frac{1}{2}$ ^h Decrease in N.F. (- 50). 10^h to 14 $\frac{1}{2}$ ^h Irregular general increase in Dec. (+ 13'). 16^h to 17^h Rapid decrease in Dec. (- 15'), followed till 18^h by partial recovery (+ 8'). 16 $\frac{1}{4}$ ^h to 18 $\frac{1}{4}$ ^h Serrated wave in N.F. (+ 60). 19 $\frac{1}{2}$ ^h to 21 $\frac{1}{4}$ ^h Very sharp wave in Dec. (- 13'). 20 $\frac{1}{2}$ ^h to 21 $\frac{3}{4}$ ^h Wave in N.F. (+ 65), very steep at first. 21 $\frac{1}{2}$ ^h to 22 $\frac{1}{2}$ ^h Domed wave in Dec. (- 4'). 22 $\frac{1}{2}$ ^h to 22 $\frac{3}{4}$ ^h Decrease in Dec. (- 3').
 - 30^d 0 $\frac{1}{4}$ ^h to 1^h Wave in Dec. (+ 6'). 0 $\frac{1}{2}$ ^h to 1 $\frac{1}{4}$ ^h Wave in N.F. (- 20). 23^h to 24^h Wave in N.F. (+ 20).
 - 31^d 14 $\frac{3}{4}$ ^h to 16^h No register of Dec. and N.F.
- April**
- 2^d 0^h to 1^h Wave in Dec. (- 3').
 - 3^d 21 $\frac{3}{4}$ ^h to 22 $\frac{3}{4}$ ^h Truncated wave in N.F. (+ 25). 22^h to 23 $\frac{1}{2}$ ^h Wave in Dec. (- 8'): 7^d 17^h Vertical Force records resumed
 - 8^d 15 $\frac{3}{4}$ ^h to 16 $\frac{1}{2}$ ^h Wave in N.F. (+ 20). 22 $\frac{1}{2}$ ^h to 23^h Wave in Dec. (- 3').
 - 9^d 18^h to 18 $\frac{1}{2}$ ^h Decrease in Dec. (- 7'), followed immediately till 20^h by a double wave (- 4', + 3'). 18 $\frac{1}{2}$ ^h to 19 $\frac{1}{2}$ ^h Wave in N.F. (+ 35). 23 $\frac{1}{2}$ ^h to 10^d 2^h Two consecutive waves in N.F. (+ 30, + 35). 23 $\frac{3}{4}$ ^h to 10^d 1^h Double wave in Dec. (+ 2', - 4').
 - 10^d 1^h to 1 $\frac{1}{2}$ ^h Decrease in Dec. (- 5'). 4 $\frac{1}{2}$ ^h to 6^h Increase in Dec. (+ 5'). 0^h to 1 $\frac{1}{2}$ ^h Irregular decrease in V.F. (- 25). 18 $\frac{1}{2}$ ^h to 19^h Rapid decrease in Dec. (- 7'), partially recovering till 20 $\frac{1}{2}$ ^h (+ 5'). 18 $\frac{3}{4}$ ^h to 20^h Truncated wave in N.F. (+ 25). 23 $\frac{1}{2}$ ^h to 11^d 1^h Wave in Dec. (- 4').
 - 11^d 2^h to 4 $\frac{1}{2}$ ^h Double-crested wave in Dec. (- 5').
 - 12^d 2 $\frac{1}{2}$ ^h to 3 $\frac{1}{4}$ ^h Truncated wave in Dec. (- 3'). 13^h to 15^h Serrated wave in N.F. (- 40). 15 $\frac{1}{2}$ ^h to 16^h Sharp wave in N.F. (+ 20). 16 $\frac{1}{2}$ ^h to 17 $\frac{1}{2}$ ^h Double wave in N.F. (\pm 20).
 - 13^d 0^h to 2^h Irregular double wave in Dec. (- 4', + 5'). 3 $\frac{1}{2}$ ^h to 4 $\frac{3}{4}$ ^h Truncated wave in Dec. (+ 6'). 4^h to 7^h Two consecutive waves in V.F. (- 20). 5^h to 6 $\frac{1}{2}$ ^h Sharp and greatly serrated wave in Dec. (+ 12'), interrupted at 5 $\frac{1}{2}$ ^h by a very steep double wave (\mp 4'). 4 $\frac{1}{2}$ ^h to 6^h Sharp serrated wave in N.F. (- 100). 6 $\frac{3}{4}$ ^h to 8^h Domed and serrated wave in Dec. (+ 6'), with a sharp wave superposed at 7 $\frac{1}{2}$ ^h (+ 3'). 6 $\frac{1}{2}$ ^h to 7^h Wave in N.F. (+ 20). 7 $\frac{1}{2}$ ^h to 8^h Very rapid oscillating decrease in N.F. (- 70). 8^h to 10^h Continuous oscillations in Dec. and N.F., with very sharp waves in Dec. at 8 $\frac{1}{2}$ ^h (+ 5'), 8 $\frac{3}{4}$ ^h (- 4') and 9 $\frac{1}{2}$ ^h (- 4'). 11 $\frac{1}{4}$ ^h to 13^h Wave in Dec. (+ 5'). 19 $\frac{3}{4}$ ^h to 20 $\frac{1}{2}$ ^h Truncated wave in Dec. (- 7'). 19 $\frac{3}{4}$ ^h to 21^h Truncated wave in N.F. (+ 25) with a small double wave superposed. 23 $\frac{1}{2}$ ^h to 14^d 1^h Wave in N.F. (+ 20).
 - 14^d 0^h to 1 $\frac{1}{2}$ ^h Wave in Dec. (- 3'). 10^h to 15^d 9 $\frac{3}{4}$ ^h No register of N.F. 17^h to 18^h Rapid decrease in Dec. (- 9'). 21 $\frac{1}{2}$ ^h to 22 $\frac{1}{2}$ ^h Double wave in Dec. (\mp 3').
 - 15^d 0 $\frac{3}{4}$ ^h to 2^h Wave in Dec. (+ 7'). 3^h to 3 $\frac{1}{2}$ ^h Increase in Dec. (+ 9') with partial return till 4 $\frac{1}{2}$ ^h (- 5'). 9 $\frac{3}{4}$ ^h to 14 $\frac{1}{2}$ ^h Steady increase in Dec. (+ 12'). 14 $\frac{3}{4}$ ^h to 15 $\frac{1}{2}$ ^h Decrease in Dec. (- 5'). 14 $\frac{3}{4}$ ^h to 16^h Wave in N.F. (- 20). 13^h to 15^h Increase in V.F. (+ 30). 18 $\frac{3}{4}$ ^h to 19^h Decrease in Dec. (- 4').
 - 16^d 3 $\frac{1}{2}$ ^h to 6^h Slow wave in N.F. (+ 30). 20 $\frac{1}{2}$ ^h to 22^h Two consecutive waves in Dec. (- 5', - 6'). 20 $\frac{1}{2}$ ^h to 21 $\frac{1}{4}$ ^h. Wave in N.F. (+ 20).
 - 17^d 1 $\frac{1}{2}$ ^h to 3^h Decrease in Dec. (- 7'). 19^h to 20^h Wave in Dec. (- 3').
 - 18^d 14 $\frac{1}{2}$ ^h Sudden increase in Dec. (+ 8'), nearly returning by 16^h (- 6'). 14 $\frac{1}{2}$ ^h Sudden increase in N.F. (+ 30). 16 $\frac{1}{2}$ ^h to 17 $\frac{1}{4}$ ^h Irregular decrease in N.F. (- 40). 18^h to 19^h Domed wave in Dec. (- 4') followed immediately till 20 $\frac{1}{4}$ ^h by two consecutive sharp waves (- 5', - 6'). 19 $\frac{1}{2}$ ^h to 19 $\frac{1}{4}$ ^h Wave in N.F. (+ 35). 22 $\frac{1}{2}$ ^h to 22 $\frac{3}{4}$ ^h Double-crested wave in Dec. (- 3'). 23 $\frac{1}{2}$ ^h to 24^h Wave in N.F. (- 20).
 - 19^d 0^h to 5^h Dec. and N.F. in continuous oscillation. 1^h to 2 $\frac{1}{2}$ ^h A general decrease in Dec. (- 13'), with two well marked waves, the first at 1 $\frac{1}{2}$ ^h (+ 4'), the second at 2^h to 2 $\frac{1}{4}$ ^h (+ 5'). 1^h to 3^h Double wave in N.F. (\pm 25), with four or five oscillations of about the same order of amplitude (25) superposed. 1^h to 3 $\frac{1}{2}$ ^h Serrated wave in V.F. (- 20). 4 $\frac{1}{2}$ ^h Very sharp serrated wave in Dec. (+ 5'). 7 $\frac{3}{4}$ ^h Very sharp wave in Dec. (- 5'). 11 $\frac{1}{4}$ ^h to 20^d 11 $\frac{1}{4}$ ^h. No register of Dec. and N.F.
 - 20^d 14 $\frac{3}{4}$ ^h to 14 $\frac{3}{4}$ ^h Increase in N.F. (+ 20). 15^h to 16 $\frac{1}{2}$ ^h Double wave in N.F. (\pm 25). 16 $\frac{1}{2}$ ^h to 16 $\frac{1}{4}$ ^h Decrease in Dec. (- 3'). 17 $\frac{1}{2}$ ^h to 19^h Decrease in Dec. (- 11'), irregularly recovering till 21 $\frac{1}{2}$ ^h. 18 $\frac{3}{4}$ ^h to 20^h Wave in N.F. (+ 30). 23 $\frac{1}{2}$ ^h to 24^h Increase in N.F. (+ 20).

1921.
April

- 21^d 0^h to 1^{1/2}^h Truncated wave in Dec. (- 5'). 0^{1/2}^h to 1^h Wave in N.F. (+ 20). 2^h to 2^{1/4}^h Increase in Dec. (+ 4'). 2^{3/4}^h to 5^{1/4}^h Irregular decrease in N.F. (- 90), interrupted by a temporary small increase from 3^{1/4}^h to 4^h. 2^{1/4}^h to 4^h Truncated wave in Dec. (+ 5'). 4^h to 4^{3/4}^h Steep wave in Dec. (+ 6'), followed immediately till 6^h by a further serrated wave (+ 7'). 5^h to 6^h Wave in V.F. (+ 15). 5^{1/4}^h to 6^{1/2}^h Rapid increase in N.F. (+ 60), steadily returning till 8^{1/2}^h. 6^{3/4}^h to 8^h Rapid decrease in Dec. (- 12'), steadily recovering till 12^h. 13^h Rapid decrease in Dec. (- 3'). 12^h to 13^{1/2}^h Increase in V.F. (+ 25). 18^{1/4}^h to 19^{1/2}^h Sharp serrated wave in Dec. (- 8'), accompanied by a similar wave in N.F. (+ 70), and a decrease in V.F. (- 15).
- 22^d 0^{3/4}^h to 3^h Two consecutive waves in Dec. (+ 10', + 8'). 3^h to 4^h Decrease in Dec. (- 4'). 1^{1/2}^h to 2^h Rapid decrease in V.F. (- 25), continuing irregularly till 3^h (- 15), and then steadily recovering till 5^{1/2}^h. 2^{1/4}^h to 2^{1/2}^h Very rapid decrease in Dec. (- 15'), partially recovering till 22^h (+ 5'), and, after two small fluctuations between 22^h and 22^{3/4}^h, completely recovering by 23^d 0^{1/2}^h. 21^{1/4}^h to 21^{3/4}^h Increase in N.F. (+ 40). 22^{1/2}^h to 23^{1/2}^h Decrease in N.F. (- 50). 21^{3/4}^h to 23^{1/2}^h Decrease in V.F. (- 30).
- 23^d 9^h to 13^h Steady increase in Dec. (+ 17'). 12^{3/4}^h to 14^h Double-crested wave in N.F. (- 25), followed till 15^h by an increase (+ 30). 13^{1/4}^h to 13^{3/4}^h Rapid decrease in Dec. (- 5'). 22^h to 23^h Wave in N.F. (+ 20), with steep rise.
- 24^d 6^h to 7^h Wave in N.F. (- 20).
- 25^d 1^{1/2}^h to 3^h Wave in Dec. (+ 4').
- 26^d 1^h to 2^h Wave in Dec. (+ 4').
- 28^d 19^{1/2}^h Sudden increase in N.F. (+ 20), returning by 20^h.
- 29^d 2^h to 2^{1/2}^h Sharp wave in N.F. (+ 20). 8^{1/2}^h to 9^{3/4}^h Rapid decrease in N.F. (- 60), followed till 11^{1/2}^h by three consecutive serrated waves (- 20). 8^{3/4}^h to 9^{1/4}^h Rapid increase in Dec. (+ 8'). 9^{1/4}^h to 10^{1/4}^h Serrated wave in Dec. (- 5'). 12^{1/2}^h to 18^h Continuous oscillation in Dec. and N.F. The principal waves in Dec. are at 13^h to 13^{1/2}^h (- 4'); 15^h and 15^{3/4}^h (- 5', - 4'); 16^h (- 6'); and from 16^{1/2}^h to 17^{1/4}^h, the last decreasing 26' till 17^h and increasing 18' till 17^{3/4}^h. The principal waves in N.F. are at 12^{3/4}^h to 13^h (+ 40); 13^{3/4}^h to 14^{1/2}^h (- 25); 15^{1/2}^h to 16^h double-crested (+ 30, + 40); 16^h to 16^{1/2}^h truncated (+ 50); and from 16^{3/4}^h to 18^h, the last increasing 130 till 17^{1/4}^h and decreasing 100 till 18^h. 18^h to 19^h Truncated wave in Dec. (- 4'). 18^{3/4}^h to 19^h Sharp wave in N.F. (+ 25). 11^{1/2}^h to 16^h General increase in V.F. (+ 125), followed till 17^h by a wave (- 30), and then till 21^h by a general decrease (- 75). 19^h to 24^h Dec. and N.F. still oscillating in a lesser degree. 23^h to 23^{1/2}^h Wave in N.F. (+ 20).

May

- 1^d 14^{1/4}^h to 14^{3/4}^h Increase in N.F. (+ 25). 12^{1/2}^h to 14^h Increase in V.F. (+ 25).
- 2^d 8^{1/2}^h to 10^h Decrease in V.F. (- 20).
- 3^d 12^h to 13^h Wave in N.F. (+ 20). 9^h to 12^{1/2}^h Increase in Dec. (+ 12'). 19^{3/4}^h to 21^h Wave in Dec. (- 7'). 23^{1/2}^h to 4^d 0^{1/2}^h Wave in N.F. (- 20).
- 4^d 1^h to 2^h Decrease in Dec. (- 7'), followed till 4^{1/2}^h by a general increase (+ 7'). 4^{1/2}^h to 6^{1/2}^h Double wave in N.F. (- 20). 4^{3/4}^h to 6^h Wave in Dec. (+ 9'). 5^h to 6^h Wave in V.F. (- 12). 12^h to 16^h Increase in V.F. (+ 40).
- 5^d 23^{1/2}^h to 23^{3/4}^h Increase in Dec. (+ 3').
- 6^d 17^{1/4}^h to 19^h Wave in N.F. (- 25).
- 8^d 8^{3/4}^h to 9^{1/4}^h Increase in Dec. (+ 7'). 23^{1/4}^h to 9^d 1^h Wave in Dec. (+ 4'). 23^{3/4}^h to 24^h Increase in N.F. (+ 20).
- 9^d 8^h to 13^h Steady increase in Dec. (+ 13'). 13^{3/4}^h to 15^h Increase in N.F. (+ 40). 15^h to 15^{1/2}^h Wave in N.F. (+ 20). 17^{1/4}^h to 18^h Wave in N.F. (+ 25). 19^h to 19^{1/2}^h Decrease in Dec. (- 4'). 20^{1/2}^h to 21^{1/4}^h Sharp wave in Dec. (+ 7'). 20^{1/2}^h to 21^{1/2}^h Wave in N.F. (- 25). 20^{3/4}^h to 21^{1/4}^h Decrease in V.F. (- 20).
- 10^d 14^h to 15^h Decrease in Dec. (- 6'), accompanied by serrated wave in N.F. (- 20). 17^h to 18^h Wave in N.F. (- 20).
- 12^d 2^h to 2^{1/2}^h Decrease in Dec. (- 3'). 7^{3/4}^h to 8^{1/2}^h Oscillating decrease in Dec. (- 7'), followed immediately till 9^h by a very sharp double wave (+ 6, - 7'), and further till 10^{1/4}^h by a rapid oscillating increase (+ 16'). 7^{3/4}^h to 8^{3/4}^h Decrease in N.F. (- 20), followed till 8^{3/4}^h by a very rapid further decrease (- 100), and immediately till 9^{1/2}^h by a serrated wave (+ 50). 8^{1/2}^h to 8^{3/4}^h Truncated wave in V.F. (- 12), followed immediately till 9^{1/4}^h by a sharp serrated wave (- 20). 9^{1/2}^h to 10^{1/4}^h Serrated wave in N.F. (+ 30). 11^h to 16^h Steady increase in V.F. (+ 50). 12^{3/4}^h to 13^{1/2}^h Serrated wave in N.F. (+ 30). 15^{3/4}^h to 16^{1/2}^h Wave in N.F. (+ 30), followed immediately till 18^h by an increase (+ 60).
- 13^d 2^{8/9}^h to 4^h Wave in N.F. (- 25). 3^h to 3^{1/2}^h Sharp wave in Dec. (+ 3').
- 13^d 12^h to 14^d 12^h. See Plate I

1921.
May

- 14^d 12³₄^h to 13³₄^h Wave in Dec. (- 7'), with large oscillations superposed, accompanied by two short period waves in N.F. (- 30). 13^h to 13¹₂^h Increase in V.F. (+ 25).
- 14^d 15^h to 15^d 15^h. See Plate II.
- 15^d 15^h to 16^d 15^h. See Plate III.
- 16^d 15^h to 17^d 8^h All three traces continuously disturbed. The principal features only are mentioned.
- 16^d 16³₄^h to 17¹₄^h Sharp wave in Dec. (- 5'), with truncated wave in N.F. (+ 50), and wave in V.F. (+ 15).
- 18^h to 19^h General increase in Dec. (+ 7'). 19¹₂^h to 20^h Serrated wave in N.F. (+ 40). 23^h to 23³₄^h Serrated wave in Dec. (+ 7'), with a serrated wave in N.F. (+ 50).
- 17^d 0^h to 2^h Serrated wave in Dec. (double-crested) (+ 10', + 8'), accompanied by serrated and truncated wave in N.F. (- 60), and a wave in V.F. (- 30). 2³₄^h to 4¹₂^h A general wave, very disturbed, in Dec (- 9'). 3¹₂^h to 4^h Rapid decrease in N.F. (- 60). 3²₃^h to 3³₄^h Decrease in V.F. (- 15). 7¹₂^h to 8^h Domed wave in N.F. (- 20). 16¹₂^h to 18³₄^h Increase in N.F. (+ 35). 21¹₂^h to 23^h Wave in N.F. (+ 20). 23¹₄^h to 23³₄^h Truncated wave in N.F. (+ 25). 23¹₄^h to 18^d 0¹₂^h General decrease in Dec. (- 8').
- 18^d 0¹₂^h to 1¹₂^h Increase in Dec. (+ 5'). 11^h to 11²₃^h Truncated wave in N.F. (- 20). 13¹₄^h to 13³₄^h Rapid increase in N.F. (+ 30). 17³₄^h to 18¹₄^h Rapid increase in N.F. (+ 30). 19¹₄^h to 19³₄^h Irregular decrease in N.F. (- 25), followed immediately till 20³₄^h by a wave (+ 20). 19³₄^h to 21^h Wave in Dec. (- 5'). 20^h to 21¹₃^h Decrease in V.F. (- 18), with sudden partial recovery (+ 10) at 21³₄^h.
- 19^d 20^h to 20³₄^h Very sharp wave in N.F. (+ 65), followed immediately till 20³₄^h by an increase (+ 20). 21^h to 22^h Wave in Dec. (- 9'). 21^h to 21¹₄^h Rapid increase in N.F. (+ 30), followed immediately till 22³₄^h by a rapid decrease (- 110) interrupted at 21³₄^h. 21^h to 23^h Fluctuating accelerated decrease in V.F. (- 75), followed by a corresponding increase till 20^d 2^h (+ 65), a wave intervening from 23^h to 23³₄^h (+ 20). 22^h to 22¹₂^h Irregular decrease in Dec. (- 5'). 22³₄^h to 22³₄^h Wave in N.F. (+ 25). 22³₄^h to 24^h Very steep double wave in Dec. (- 26', + 20'), accompanied by a corresponding wave in N.F. (+ 150, - 85).
- 20^d 0^h to 1^h Truncated wave in Dec. (- 7'). 2¹₂^h to 4^h Steep wave in Dec. (+ 17'), accompanied by a similar wave in N.F. (- 75), and a wave in V.F. (- 45). 5^h to 7^h Dec. and N.F. traces continuously disturbed with small oscillations. 5^h to 6¹₂^h Wave in Dec. (+ 10'), accompanied by a general decrease in N.F. (- 50). 6²₃^h to 7^h Very sharp wave in Dec. (+ 6'), accompanied by a very sharp double wave in N.F. (+ 20). 14¹₂^h to 20^h Dec. and N.F. traces greatly disturbed, and in continuous oscillation. The general feature in Dec. is a broad flattened wave 14¹₂^h to 19¹₂^h (+ 15'). Superposed are:—a sudden increase at 14¹₂^h (+ 5'); a sudden increase at 15¹₄^h (+ 4'); a wave at 15³₄^h to 16^h (+ 3'); a very steep double wave at 16²₃^h (\pm 5'); a sharp wave at 18^h to 18¹₄^h (+ 5'); and a rapid decrease 19^h to 19³₄^h (- 8'). In N.F. the amplitude of the general wave is about 100 γ . Superposed on this wave are:—a sudden increase at 14³₄^h (+ 110), returning in two stages till 15^h; a sharp double wave 15^h to 15³₄^h (\mp 30); a very sharp wave 15²₃^h to 15¹₄^h (- 40); a sudden increase at 16¹₂^h (+ 40), followed by a very sharp double wave at 16²₃^h (\mp 40); a sharp double wave, 17¹₂^h to 17²₃^h (\mp 30); a sharp wave 17³₄^h to 18¹₄^h (+ 40); a rapid decrease 18¹₄^h to 19¹₂^h (- 60). 19¹₄^h to 20¹₂^h A serrated domed wave in N.F. (+ 40). 18^h to 19¹₂^h Increase in V.F. (+ 25), gradually returning till 23^h. 22¹₄^h to 22³₄^h Increase in N.F. (+ 20). 23^h to 23¹₄^h Increase in N.F. (+ 25). 23³₄^h to 24^h Wave in N.F. (+ 50), very steep at beginning and end. 23¹₄^h to 23³₄^h Wave in Dec. (- 4'), followed immediately till 21^d 0¹₂^h by a truncated wave (- 4'). 23¹₂^h to 24^h Rapid decrease in V.F. (- 20).
- 21^d 0^h to 2¹₂^h General decrease in N.F. (- 70). 0¹₂^h to 3¹₂^h Irregular double wave in Dec. the first part truncated (- 7', + 6'), on which are superposed at 3^h, 3¹₄^h and 3²₃^h three small steep waves (+ 3'). 1¹₂^h to 3^h Wave in V.F. (+ 20). 6^h to 6²₃^h Decrease in N.F. (- 40). 7¹₂^h to 8¹₂^h Wave in N.F. (- 20). 12³₄^h to 13¹₂^h Increase in N.F. (+ 25). 14^h to 14¹₂^h Serrated wave in N.F. (- 35). 13^h to 14^h Increase in Dec. (+ 5'). 15^h to 15¹₂^h Irregular decrease in N.F. (- 20) followed till 16^h by an increase (+ 50). 15¹₄^h to 16¹₂^h Truncated wave in Dec. (- 3'). 17¹₂^h to 19¹₂^h Irregular wave in Dec. (- 10'). 17³₄^h to 19³₄^h Irregular serrated wave in N.F. (+ 70).
- 22^d 11^h to 11³₄^h Increase in Dec. (+ 5'). 11³₄^h to 12¹₂^h Double-crested wave in N.F. (- 30). 12^h to 14^h Increase in V.F. (+ 25). 20¹₂^h to 21¹₃^h Wave in Dec. (- 5'). 20³₄^h to 21¹₃^h Wave in N.F. (+ 20).
- 23^d 0²₃^h to 1²₃^h Wave in N.F. (+ 35). 0²₃^h to 4^h Slow wave in V.F. (- 25). 1^h to 2¹₄^h Double wave in Dec. (\pm 3'). 6¹₂^h to 8¹₂^h Decrease in N.F. (- 35).
- 24^d 8^h to 9¹₂^h Decrease in V.F. (- 20). 17³₄^h to 18^h Increase in N.F. (+ 20). 22^h to 22³₄^h Decrease in Dec. (- 3').
- 26^d 14¹₂^h to 15¹₂^h Serrated wave in N.F. (+ 25).
- 27^d 20³₄^h to 22^h Irregular wave in Dec. (- 4').
- 28^d 3¹₂^h to 4^h Wave in Dec. (+ 3'). 20¹₂^h to 22¹₂^h Two consecutive waves in Dec. (- 4'). 21¹₂^h to 22¹₂^h Wave in N.F. (+ 25).
- 29^d 12^h to 13¹₂^h Wave in N.F. (- 20).
- 31^d 15¹₂^h to 16^h Serrated wave in N.F. (+ 20).

1921.

June

- 1^d 10^{1h} to 10^{3h} Decrease in N.F. (- 20).
 3^d 20^{3h} Sudden increase in N.F. (+ 25). 22^{1h} to 23^{1h} Truncated wave in N.F. (+ 20). 22^{3h} to 4^d 0^{1h} Flattened wave in Dec. (- 4').
 4^d 1^h to 2^h Wave in Dec. (- 6'). 1^h to 1^{1h} Decrease in N.F. (- 40). 14^{2h} to 15^{1h} Wave in N.F. (- 20). 16^{3h} to 18^{1h} Increase in N.F. (+ 40). 17^{3h} to 18^{1h} Wave in Dec. (- 3'). 20^{3h} to 21^{1h} Wave in Dec. (- 3'). 21^h to 22^h Wave in N.F. (+ 20).
 5^d 2^h to 4^h Wave in Dec. (- 3').
 6^d 11^{1h} to 19^h Steady increase in V.F. (+ 60), partially returning till 22^h (- 30). 14^h to 14^{1h} Truncated wave in N.F. (- 20). 14^{2h} to 15^{1h} Oscillating decrease in N.F. (- 35), followed till 16^{3h} by an irregular serrated wave (+ 60). 16^h to 17^h Decrease in Dec. (- 7'). 17^h to 17^{1h} Irregular increase in N.F. (+ 40). 17^{3h} to 18^{1h} Sharp wave in N.F. (+ 20). 18^h to 19^h Accelerated decrease in Dec. (- 14'), partially recovering till 19^{2h} (+ 9'). 19^h to 20^h Wave in N.F. (+ 55).
 7^d 9^{1h} to 11^{1h} No trace in V.F. 13^h to 14^h Truncated wave in N.F. (+ 25). 15^{1h} to 16^{1h} Wave in N.F. (+ 50). 15^{2h} to 16^{3h} Wave in Dec. (+ 3'). 17^{1h} to 18^h Wave in N.F. (+ 20). 18^h to 20^h Truncated wave in N.F. (+ 25).
 8^d 20^h to 20^{3h} Truncated wave in N.F. (+ 35). 19^{1h} to 20^{1h} Wave in Dec. (- 4'), followed till 21^{1h} by a rapid decrease (- 10'). 20^{3h} to 22^h Four consecutive small waves in N.F., followed till 22^{3h} by a double-crested wave (- 50). 22^{1h} to 22^{3h} Wave in Dec. (+ 4'). 21^h to 24^h Two consecutive waves in V.F. (- 20, - 30). 22^{3h} to 24^h Double wave in Dec. (+ 5', - 6'). 23^h to 23^{1h} Wave in N.F. (- 30)
 9^d 1^h to 3^{1h} Domed wave in Dec. (+ 7'). 2^h to 5^h Slow wave in V.F. (- 20). 16^{1h} to 18^{1h} General increase in N.F. (+ 60) with a wave superposed at 17^h to 17^{1h} (- 20). 18^{3h} to 18^{1h} Decrease in N.F. (- 30). 19^h to 20^{1h} Wave in N.F. (- 30). 20^{1h} to 21^h Decrease in N.F. (- 20).
 10^d 1^h to 2^{1h} Irregular double-crested wave in Dec. (+ 11'). 1^{3h} to 2^{1h} Rapid decrease in V.F. (- 40), steadily recovering till 6^h. 19^{1h} to 20^{1h} Wave in Dec. (- 4'). 19^{1h} to 20^{1h} Wave in N.F. (+ 20).
 11^d 1^{2h} to 2^{1h} Wave in Dec. (+ 3'). 14^{1h} to 16^h Increase in N.F. (+ 30).
 13^d 17^h Rapid increase in N.F. (+ 20). 17^{1h} to 18^{1h} Wave in Dec. (- 3').
 14^d 0^{2h} to 1^{3h} Wave in Dec. (+ 4'). 0^{3h} to 1^h Rapid increase in N.F. (+ 20). 3^{1h} to 4^{1h} Decrease in Dec. (- 5'). 12^{3h} to 14^h Domed wave in N.F. (+ 20). 15^h to 17^h Increase in V.F. (+ 25). 16^h to 17^h Truncated wave in N.F. (- 25). 22^{1h} to 24^h Decrease in Dec. (- 5').
 15^d 0^h to 1^{1h} Wave in Dec. (+ 3').
 16^d 8^{3h} to 9^h Wave in Dec. (- 3'). 16^{1h} to 16^{3h} Sharp wave in V.F. with large continuous oscillations superposed (+ 50).
 17^d 2^{1h} to 4^h Wave in Dec. (+ 3'). 2^{1h} to 4^{1h} Wave in N.F. (- 20). 13^{3h} to 14^{3h} Truncated wave in N.F. (- 20).
 20^d 0^{1h} to 1^h Decrease in Dec. (- 4'). 14^{1h} to 14^{3h} Increase in N.F. (+ 30). 16^{1h} to 16^{3h} Wave in N.F. (+ 20).
 22^d 3^h to 4^{1h} Wave in N.F. (- 25). 3^h to 4^{1h} Serrated wave in Dec. (+ 5').
 23^d 13^h to 14^h Wave in N.F. (+ 20). 15^{1h} to 16^h Decrease in Dec. (- 6'). 14^{1h} to 15^{1h} Increase in N.F. (+ 30). 15^{1h} to 17^{1h} Two consecutive double waves in N.F. (\pm 30, \mp 25).
 26^d 14^{1h} to 15^{1h} Increase in N.F. (+ 35). 16^{3h} to 18^{1h} Truncated wave in N.F. with several small waves superposed (+ 40).
 27^d 17^h to 17^{1h} Increase in N.F. (+ 20).
 29^d 1^{2h} to 3^h Wave in Dec. (+ 3'). 5^{1h} Sharp decrease in Dec. (- 3'). 6^{3h} to 7^h Irregular decrease in Dec. (- 4'). 16^{1h} to 17^h Wave in N.F. (+ 20). 19^{1h} to 20^{1h} Truncated wave in N.F. (- 20). 20^h to 20^{1h} Decrease in Dec. (- 4').

July

- 1^d 0^{1h} to 0^{3h} Decrease in Dec. (- 3').
 2^d 14^{2h} to 15^{2h} Increase in N.F. (+ 20).
 3^d 15^h to 15^{1h} Increase in N.F. (+ 20).
 4^d 1^{2h} to 2^{1h} Wave in Dec. (+ 4'). 20^{1h} to 21^{1h} Truncated wave in Dec. (- 4'). 20^{1h} to 21^{1h} Double-crested wave in N.F. (+ 30).
 5^d 22^h to 23^{1h} Wave in Dec. (- 3').

1921.
July

- 6^d 14^h Very rapid increase in N.F. (+ 20). 20^h to 20^{3/4}^h Wave in N.F. (- 20). 21^{1/4}^h to 22^h Decrease in Dec. (- 3'). 23^{1/2}^h to 7^d 1^{1/2}^h Serrated wave in Dec. (- 4').
- 7^d 3^{1/2}^h to 4^{2/3}^h Double wave in Dec. (± 4'). 12^h to 14^{1/4}^h Wave in N.F. (- 50). 14^{1/4}^h to 15^h Wave in N.F. (- 50). 15^h to 16^{1/4}^h Double-crested wave in N.F. (- 35). 16^{1/4}^h to 16^{2/3}^h Wave in N.F. (- 20). 19^h to 19^{1/4}^h Wave in N.F. (- 25).
- 8^d 5^h to 6^h Irregular wave in Dec. (- 4'). 9^h to 10^h Decrease in N.F. (- 40). 11^{2/3}^h to 13^h Increase in Dec. (+ 5'). 13^{1/4}^h to 14^{1/2}^h Wave in N.F. (- 50). 17^{1/4}^h Rapid decrease in Dec. (- 3'). 20^{2/3}^h to 22^h Double-crested wave in Dec. (- 8', - 4'). 21^h to 22^h Irregular wave in N.F. (+ 40). 23^{1/4}^h to 9^d 1^h Double wave in Dec. (± 3').
- 9^d 0^h to 1^h Double-crested wave in N.F. (+ 20). 0^h to 0^{1/2}^h Decrease in V.F. (- 12). 3^h to 5^{1/4}^h Irregular serrated double-crested wave in Dec. (+ 9', + 7'). 3^{1/2}^h to 4^{1/2}^h Decrease in V.F. (- 18). 4^h to 7^h Three consecutive small waves of increasing amplitude in N.F. (the last + 20) followed by a decrease (- 20). 7^h to 8^{1/2}^h Sharp wave in N.F. (- 20). 6^{1/2}^h to 7^{2/3}^h Wave in Dec. (+ 3'). 15^h to 15^{1/2}^h Decrease in N.F. (- 20), followed till 17^h by two consecutive waves (+ 25, + 20). 15^{1/2}^h to 15^{3/4}^h Decrease in Dec. (- 3'). 17^h to 18^h Increase in N.F. (+ 30). 13^h to 16^h Steady increase in V.F. (+ 40). 18^{1/2}^h to 19^{1/4}^h Double wave in N.F. (- 20, + 40). 18^{1/2}^h to 19^{1/4}^h Sharp wave in Dec. (- 9'), with incomplete recovery.
- 10^d 21^{3/4}^h to 22^{1/2}^h Wave in N.F. (+ 20).
- 12^d 14^h to 15^h Wave in N.F. (- 30). 15^{1/2}^h to 16^h Wave in N.F. (+ 20) followed by an increase till 16^{1/2}^h (+ 20). 17^{1/4}^h to 17^{2/3}^h Decrease in Dec. (- 3').
- 13^d 20^h to 20^{3/4}^h Decrease in N.F. (- 20).
- 14^d 1^{1/2}^h to 2^{1/2}^h Wave in Dec. (+ 4'). 2^{1/2}^h to 4^h Wave in N.F. (- 30) 2^{2/3}^h to 4^{1/2}^h Wave in Dec. (+ 5'). 5^{1/2}^h to 7^{1/2}^h Wave in Dec. (+ 4'). 5^{1/2}^h to 7^h Wave in N.F. (- 20). 5^h to 7^h Wave in V.F. (+ 12).
- 15^d 1^h to 3^h Double wave in Dec. (+ 5', - 3'). 4^h to 5^{1/4}^h Truncated wave in N.F. (- 30). 4^h to 5^{2/3}^h Irregular wave in Dec. (+ 5'). 1^{1/2}^h to 2^h Decrease in V.F. (- 15). 16^{1/2}^h to 17^{1/2}^h Wave in N.F. (- 20). 17^{1/4}^h to 19^h Double wave in N.F. (± 20). 22^{1/2}^h to 22^{3/4}^h Rapid decrease in Dec. (- 6'). 22^{3/4}^h to 23^{1/2}^h Wave in N.F. (+ 20).
- 16^d 0^h to 0^{1/2}^h Wave in Dec. (+ 3'). 2^h to 3^{3/4}^h Irregular wave in Dec. (+ 11'), the first part steep. 7^h to 8^h Wave in Dec. (+ 3'). 2^h to 4^{1/2}^h Truncated wave in V.F. (- 20). 14^{1/4}^h to 15^{1/2}^h Serrated wave in N.F. (+ 25). 21^h to 22^{1/2}^h Double-crested wave in Dec. (- 4', - 3'), accompanied by a similar wave in N.F. (+ 25, + 30).
- 19^d 21^{1/4}^h to 22^{1/2}^h Slightly truncated wave in Dec. (- 6'). 21^{3/4}^h to 22^h Truncated wave in N.F. (+ 30).
- 20^d 13^h to 15^{1/2}^h Three consecutive waves in N.F. (+ 15, + 20, + 20). 14^{1/4}^h to 15^h Increase in V.F. (+ 15).
- 22^d 2^h to 2^{1/2}^h Wave in Dec. (+ 3'). 23^h to 23^d 1^{1/2}^h. Two consecutive waves in Dec. (+ 3', + 4').
- 23^d 0^h to 2^h Irregular wave in N.F. (+ 20). 3^h to 5^{1/2}^h Wave in Dec. (+ 5'). 0^h to 4^h Slow wave in V.F. (- 15). 16^h to 16^{2/3}^h Increase in N.F. (+ 30), partially returning till 17^h (- 20).
- 24^d 2^h to 3^h Wave in Dec. (+ 4'). 2^{1/2}^h to 3^{1/4}^h Wave in N.F. (+ 20). 2^{1/2}^h to 3^h Decrease in V.F. (- 12).
- 25^d 20^{1/2}^h to 21^{1/2}^h Wave in Dec. (- 3'). 20^h to 20^{1/4}^h Wave in V.F. (- 12).
- 26^d 15^{1/2}^h to 16^{1/4}^h Truncated wave in N.F. (+ 20). 20^h to 22^{1/2}^h Flat wave in Dec. (- 7'), with a superposed wave at 20^{2/3}^h to 21^h (+ 3'). 20^h to 20^{2/3}^h Wave in N.F. (+ 20). 20^{2/3}^h to 21^{1/2}^h Wave in N.F. (+ 30).
- 28^d 1^h to 2^h Wave in Dec. (+ 4'). 9^h to 10^h Decrease in V.F. (- 15). 19^h to 19^{1/2}^h Decrease in Dec. (- 3'). 21^{1/2}^h to 23^h Wave in N.F. (+ 35).
- 29^d 21^{1/2}^h to 24^h Two consecutive waves in Dec. (- 5'). 22^h to 24^h Double-crested wave in N.F. (+ 20, + 25). 22^h to 30^d 3^h Slow wave in V.F. (- 20).
- 30^d 17^{1/2}^h to 20^h Three consecutive small waves in N.F. (about + 15). 18^h to 20^h Wave in Dec. (- 5').

August

- 2^d 17^{1/2}^h to 18^{1/4}^h Truncated wave in N.F. (+ 20). 19^{1/2}^h to 21^h Wave in N.F. (+ 20). 20^{1/2}^h to 21^{1/2}^h Wave in Dec. (- 3'). 22^h to 23^{1/2}^h Wave in Dec. (- 4').
- 3^d 0^h to 1^{1/2}^h Double-crested wave in Dec. (+ 5'). 2^{1/2}^h to 3^{1/2}^h Increase in Dec. (+ 7'). 3^{1/2}^h to 5^{1/4}^h Decrease in Dec. (- 9'). 6^h to 9^{1/2}^h Irregular increase in Dec. (+ 16'). 6^{1/2}^h to 8^h Rapid decrease in N.F. (- 95). 9^{1/2}^h to 10^{1/2}^h Wave in Dec. (- 4'). 13^{1/4}^h to 15^h Wave in N.F. (- 25).
- 4^d 17^{1/2}^h to 18^{1/4}^h Truncated wave in N.F., with sudden rise at beginning (+ 25). 20^{1/2}^h to 20^{2/3}^h Wave in N.F. (+ 20). 22^h to 23^h Increase in Dec. (+ 5'). 23^h to 5^d 0^{1/2}^h Decrease in Dec. (- 5').

1921.

August

- 5^d 0₃¹h to 1^h Wave in Dec. (- 6'). 2₄³h to 4₄¹h Irregular double wave in Dec. (± 3'). 3^h to 3₃²h Rapid decrease in N.F. (- 50), followed till 5₂¹h by gradual partial recovery (+ 40). 6^h to 9₂¹h Steady decrease in N.F. (- 85). 8₃¹h to 10^h Increase in Dec. (+ 8'). 14^h to 15₂¹h Double wave in N.F. (± 20). 18₃¹h to 19^h Wave in Dec. (- 6'). 18₂¹h Sudden increase in N.F. (+ 30). 23₃¹h to 6^d 0₂¹h Wave in Dec. (+ 5').
- 6^d 1₄³h to 4^h Double wave in N.F. (± 20). 2^h to 4₂¹h Double wave in Dec. (± 3'). 6₂¹h to 7₂¹h Domed wave in Dec. (+ 5'), with similar wave in N.F. (- 20). 9^h to 10^h Decrease in N.F. (- 30). 12^h to 13₄¹h Truncated wave in N.F. (+ 20). 13₂¹h to 14₃¹h Increase in N.F. (+ 35). 15₄¹h to 16₃¹h Decrease in N.F. (- 30). 17^h to 17₂¹h Wave in N.F. (+ 20). 23₂¹h to 7^d 1₄¹h Double wave in Dec. (± 4').
- 7^d 3₄¹h to 4₄¹h Wave in N.F. (- 20). 3₃¹h to 4₃¹h Wave in Dec. (+ 5'). 8₂¹h to 10^h Wave in N.F. (- 20). 8₃¹h to 9₂¹h Wave in Dec. (+ 3'). 13^h to 14₃¹h Wave in N.F. (- 30).
- 8^d 3^h to 4₂¹h Wave in Dec. (+ 6'), accompanied by a double-crested wave in N.F. (- 20, - 25). 3₂¹h to 4₂¹h Decrease in V.F. (- 15). 13₂¹h to 16^h Increase in V.F. (+ 35). 15₄¹h to 15₂¹h Decrease in Dec. (- 4'). 22₃¹h to 23₂¹h Wave in Dec. (- 3'), followed till 24^h by a decrease (- 3').
- 9^d 23^h to 10^d 0₂¹h Wave in N.F. (+ 20).
- 10^d 4₄¹h to 6₂¹h Wave in Dec. (+ 4').
- 11^d 17₂¹h to 19₃¹h Two consecutive waves in Dec. (- 8', - 4'). 17₃¹h to 20^h Triple wave in N.F. (+ 30, - 25, + 20). 21₄¹h to 22₃¹h Double-crested wave in N.F. (+ 20). 21₄¹h to 22₂¹h Wave in Dec. (- 11'). 23₃¹h to 12^d 1₄¹h Double wave in N.F. (± 20).
- 12^d 0^h to 0₃²h Rapid decrease in V.F. (- 30), nearly recovering by 4^h (+ 25).
- 13^d 22₂¹h to 23₄¹h Wave in Dec. (- 4').
- 14^d 2₃²h to 4₂¹h Wave in Dec. (+ 3'). 19₄¹h to 20^h Wave in N.F. (+ 20). 20₂¹h to 21₃¹h Irregular decrease in Dec. (- 6'), followed till 15^d 1^h by a similar increase (+ 7').
- 15^d 1^h to 2^h Decrease in Dec. (- 5'). 3^h to 4^h Wave in Dec. (+ 3'). 13₄¹h to 14₂¹h Serrated wave in N.F. (+ 20). 14₃¹h to 16^h Serrated wave in N.F. (+ 30). 16^h to 17^h Increase in N.F. (+ 50), with two sharp oscillations at 16₂¹h. 17^h to 18^h Fluctuating decrease in Dec. (- 8'). 18₂¹h to 19^h Wave in N.F. (- 20). 18₂¹h to 19₃¹h Wave in Dec. (- 4'). 16^h to 18^h Increase in V.F. (+ 35), steadily returning till 23^h. 18^h to 16^d 1^h Many minor oscillations in N.F. and Dec. 22₂¹h to 23^h Wave in Dec. (+ 4'). 23₃¹h to 16^d 0₄¹h Wave in N.F. (+ 20).
- 16^d 0^h Rapid increase in Dec. (+ 7'), with partial return till 0₂¹h (- 3'). 18₂¹h to 18₄¹h Oscillations in V.F. (± 20). 18₂¹h to 19₂¹h Wave in Dec. (- 11'). 18₃¹h to 20^h Wave in N.F. (+ 50). 22^h to 22₃¹h Wave in Dec. (- 4'), with corresponding wave in N.F. (+ 20).
- 17^d 17₂¹h to 19^h Wave in N.F. (+ 35). 17₃¹h to 18₃¹h Wave in Dec. (- 5'). 22₂¹h to 23₂¹h Wave in Dec. (- 4').
- 18^d 3^h to 4₂¹h Wave in Dec. (+ 5'). 3₂¹h to 4₂¹h Increase in N.F. (+ 20).
- 19^d 23₃¹h to 20^d 1₂¹h Two consecutive waves in Dec. (+ 4', + 3').
- 20^d 19₄¹h to 21₂¹h Wave in Dec. (- 5').
- 21^d 12^h to 13₂¹h Wave in N.F. (+ 20). 18^h to 19^h Wave in Dec. (- 5'). 18^h to 18₂¹h Increase in N.F. (+ 20).
- 22^d 19₂¹h to 19₃¹h Wave in V.F. (- 15).
- 24^d 1^h to 3^h Wave in Dec. (+ 4').
- 26^d 1₄¹h Sudden increase in N.F. (+ 20). 11₄¹h to 12^h Rapid irregular decrease in N.F. (- 35), with fluctuating recovery till 14^h. 14₃¹h to 15^h Wave in N.F. (+ 25), with wave in Dec. (+ 3'). 16^h to 17₂¹h Double wave in N.F. (- 35, + 20). 16^h to 16₃¹h Decrease in Dec. (- 4'). 17₂¹h to 18₂¹h Irregular decrease in Dec. (- 6'). 18₃¹h to 18₄¹h Increase in N.F. (+ 25).
- 27^d 1^h to 3^h Two consecutive waves in Dec. (+ 3'). 1₃¹h to 2₁^h Truncated wave in N.F. (+ 20). 7₄¹h to 8₄¹h Continuous oscillation in Dec. the largest amplitude at 8₄¹h (+ 3'). 11₄¹h to 14^h Serrated wave in N.F. (+ 25). 14^h to 15^h Accelerated decrease in Dec. (- 7'). 15₃¹h to 16^h Wave in N.F. (+ 20). 19^h to 20^h Wave in Dec. (- 7') with corresponding wave in N.F. (+ 45).
- 28^d 20^h to 21^h Truncated wave in Dec. (- 3').
- 30^d 13₄¹h to 14₃¹h Double wave in N.F. (± 20). 15₂¹h to 17^h Sharp wave in N.F. (+ 40). 17^h to 18₂¹h Increase in N.F. (+ 65) with a wave superposed at 18^h to 18₄¹h (- 20). 17^h to 19₂¹h Slow wave in V.F. (+ 20). 18^h to 18₃¹h Decrease in Dec. (- 10'). 18₃¹h to 19^h Wave in Dec. (+ 3'). 18₃¹h to 20^h Irregular decrease in N.F. (- 60) very rapid towards the end. 19₂¹h to 21₂¹h Truncated wave in Dec. (+ 10'). 20₂¹h to 21^h Decrease in V.F. (- 20). 21₂¹h to 22^h Wave in Dec. (+ 4'). 21₄¹h to 21₃¹h Wave in N.F. (+ 25). 22₃¹h to 24^h Truncated wave in N.F. (- 30). 22₃¹h to 31^d 0₄¹h Irregular increase in Dec. rapid at first (+ 15'). 23^h to 31^d 3^h Slow wave in V.F. (- 20).
- 31^d 0₃¹h to 1^h Rapid decrease in Dec. (- 11'), followed till 3₂¹h by an irregular recovery. 1^h to 3₂¹h Decrease in N.F. (- 35). 3₂¹h to 4₂¹h Decrease in Dec. (- 5'). 5^h to 6^h Wave in Dec. (+ 3').

1921.

- September 2^d 3 $\frac{1}{2}$ ^h to 8^h Wave in V.F. (- 30). 4^h to 5 $\frac{2}{3}$ ^h Irregular serrated wave in Dec. (+ 10'), steep at first. 5 $\frac{2}{3}$ ^h to 7^h Triple-crested wave in Dec. (+ 10', + 10', + 7'). followed immediately till 8^h by a domed, serrated wave (+ 8'). 6^h to 6 $\frac{1}{4}$ ^h Very rapid decrease in N.F. (- 90) with immediate partial recovery (+ 60). 8^h to 9 $\frac{1}{3}$ ^h Rapid decrease in N.F. (- 90), interrupted temporarily at 9^h. 9^h to 10 $\frac{1}{3}$ ^h Wave in Dec. (+ 10'). 9 $\frac{1}{3}$ ^h to 11^h Increase in N.F. (+ 80). 12^h to 12 $\frac{2}{3}$ ^h Oscillating decrease in N.F. (- 45). 12^h to 13 $\frac{1}{3}$ ^h Increase in V.F. (+ 35). 13 $\frac{1}{3}$ ^h to 14^h Irregular wave in N.F. (+ 30). 14^h to 14 $\frac{2}{3}$ ^h Increase in N.F. (+ 30). 14 $\frac{2}{3}$ ^h to 15 $\frac{1}{4}$ ^h Rapid oscillating decrease in Dec. (- 12'). 15^h to 15 $\frac{1}{3}$ ^h Very rapid increase in N.F. (+ 60), with immediate partial return till 15 $\frac{1}{2}$ ^h (- 30). 15 $\frac{1}{2}$ ^h to 15 $\frac{1}{3}$ ^h Wave in Dec. (+ 3'). 14 $\frac{1}{2}$ ^h to 16^h Increase in V.F. (+ 35), gradually returning till 21^h. 16 $\frac{1}{4}$ ^h to 18^h Flattened serrated wave in Dec. (+ 5'). 16 $\frac{2}{3}$ ^h to 17 $\frac{1}{4}$ ^h Wave in N.F. (+ 20). 19 $\frac{1}{3}$ ^h to 21^h Steep serrated wave in Dec. (- 12'). 19 $\frac{2}{3}$ ^h to 21^h Irregular wave in N.F. (+ 45).
- 3^d 13^h to 15^h Irregular wave in N.F. (- 30). 21 $\frac{1}{3}$ ^h to 23^h Wave in Dec. (- 4').
- 4^d 3^h to 4 $\frac{1}{3}$ ^h Double-crested wave in Dec. (+ 7', + 5'). 2 $\frac{1}{2}$ ^h to 4^h Truncated wave in N.F. (- 20). 3 $\frac{1}{3}$ ^h to 4 $\frac{1}{4}$ ^h Decrease in V.F. (- 15). 16 $\frac{3}{4}$ ^h to 18^h Domed wave in Dec. (- 4'). 19 $\frac{1}{4}$ ^h to 20^h Wave in Dec. (- 6'). 19 $\frac{2}{3}$ ^h to 20^h Wave in N.F. (+ 30). 21 $\frac{1}{3}$ ^h to 22 $\frac{2}{3}$ ^h Double wave in Dec. (+ 2'). 21 $\frac{1}{2}$ ^h to 23^h Wave in N.F. (+ 35). 22^h to 22 $\frac{1}{4}$ ^h Decrease in V.F. (- 12).
- 5^d 20^h to 21^h Wave in Dec. (- 3').
- 6^d 2^h to 3^h Wave in Dec. (+ 4'). 20^h to 21^h Decrease in Dec. (- 3').
- 7^d 18 $\frac{1}{2}$ ^h to 20 $\frac{2}{3}$ ^h Wave in Dec. (- 5'). 20 $\frac{2}{3}$ ^h to 22^h Wave in N.F. (+ 35). 20 $\frac{2}{3}$ ^h to 21^h Decrease in Dec. (- 4'). 22 $\frac{1}{3}$ ^h to 23 $\frac{1}{3}$ ^h Irregular decrease in Dec. (- 6').
- 8^d 0^h to 4^h Double wave in Dec. (+ 7, - 12'). 0^h to 3^h Flattened wave in N.F. (+ 40). 0 $\frac{1}{4}$ ^h to 3^h Flattened wave in V.F. (- 20). 16^h to 17 $\frac{1}{4}$ ^h Increase in V.F. (+ 20). 14^h to 15 $\frac{1}{2}$ ^h Irregular wave in N.F. (- 25). 16^h to 16 $\frac{1}{2}$ ^h Decrease in N.F. (- 20). 17^h to 17 $\frac{1}{2}$ ^h Sharp wave in N.F. (- 30). 17^h to 17 $\frac{1}{3}$ ^h Very rapid decrease in Dec. (- 10'), followed till 18^h by irregular partial recovery (+ 5'). 21 $\frac{1}{4}$ ^h to 22 $\frac{1}{4}$ ^h Decrease in Dec. (- 5').
- 9^d 1 $\frac{2}{3}$ ^h to 4 $\frac{1}{2}$ ^h Two consecutive waves in Dec. (- 3', - 4'). 2 $\frac{1}{4}$ ^h to 5^h Two consecutive waves in N.F. (- 20).
- 11^d 0^h to 0 $\frac{2}{3}$ ^h Increase in N.F. (+ 20).
- 13^d 22 $\frac{3}{4}$ ^h to 23^h Decrease in Dec. (- 3').
- 15^d 3 $\frac{1}{2}$ ^h to 4 $\frac{1}{4}$ ^h Decrease in Dec. (- 5').
- 16^d 20^h to 21 $\frac{1}{3}$ ^h Truncated wave in N.F. (+ 25). 20 $\frac{1}{4}$ ^h to 22^h Double-crested wave in Dec. (- 5').
- 17^d 12 $\frac{3}{4}$ ^h Sharp wave in V.F. (+ 35).
- 18^d 17 $\frac{2}{3}$ ^h to 19^h Increase in N.F. (+ 30). 20^h to 21 $\frac{1}{3}$ ^h Wave in Dec. (- 5').
- 19^d 0^h to 1 $\frac{1}{4}$ ^h Wave in Dec. (+ 4'). 8^h to 9^h Wave in N.F. (- 20).
- 21^d 2^h to 2 $\frac{1}{2}$ ^h Decrease in Dec. (- 3'). 5 $\frac{1}{2}$ ^h to 7^h Wave in N.F. (- 20). 22 $\frac{3}{4}$ ^h to 23 $\frac{2}{3}$ ^h Wave in Dec. (+ 6'). 22 $\frac{3}{4}$ ^h Very rapid increase in N.F. (+ 35), steadily returning till 22^d 0 $\frac{1}{2}$ ^h. 22 $\frac{3}{4}$ ^h to 23 $\frac{1}{2}$ ^h Rapid decrease in V.F. (- 20).
- 23^d 2^h to 4 $\frac{1}{2}$ ^h Double wave in N.F. (\pm 20). 2^h to 5^h Double wave in Dec. (\mp 6'). 4 $\frac{1}{2}$ ^h to 5^h Decrease in V.F. (- 15), followed till 8 $\frac{1}{2}$ ^h by a steady increase (+ 25). 7 $\frac{1}{2}$ ^h to 8^h Rapid decrease in N.F. (- 30). 11^h to 12^h Rapid oscillating increase in Dec. (+ 7'). 14 $\frac{1}{2}$ ^h to 16^h Irregular wave in N.F. (- 25).
- 27^d 20^h to 21^h Domed wave in Dec. (- 4'). 22 $\frac{1}{2}$ ^h to 23 $\frac{1}{2}$ ^h Wave in N.F. (+ 20)
- 28^d 18 $\frac{3}{4}$ ^h to 20^h Wave in N.F. (- 35). 18^h to 19^h Wave in Dec. (- 3'), followed immediately till 20^h by a rapid decrease (- 10'). 19^h to 21^h Wave in V.F. (+ 20). 20 $\frac{1}{3}$ ^h to 21^h Wave in Dec. (- 7'), with a corresponding wave in N.F. (+ 35). 21 $\frac{1}{4}$ ^h to 22^h Sudden increase in N.F. (+ 20) followed till 23 $\frac{1}{3}$ ^h by a series of minor oscillations, the largest a wave at 23^h (+ 25). 22^h to 29^d 0 $\frac{1}{2}$ ^h Serrated wave in Dec. (- 10').
- 29^d 0 $\frac{3}{4}$ ^h to 1 $\frac{1}{4}$ ^h Sharp wave in N.F. (- 25). 1 $\frac{1}{4}$ ^h to 1 $\frac{1}{2}$ ^h Rapid increase in Dec. (+ 6'), followed immediately till 2^h by a very rapid decrease (- 16'). 1 $\frac{1}{2}$ ^h to 3^h Wave in N.F. (+ 60). 1 $\frac{1}{2}$ ^h to 2^h Very rapid decrease in V.F. (- 50), partially recovering till 3^h (+ 20). 2^h to 3^h Wave in Dec. (- 5'). 3^h to 4^h Serrated wave in N.F. (+ 30). 3 $\frac{1}{2}$ ^h to 4 $\frac{1}{4}$ ^h Rapid increase in Dec. (+ 10'). 4^h to 4 $\frac{1}{4}$ ^h Decrease in N.F. (- 30). 4^h to 6^h Increase in V.F. (+ 25). 11^h to 12^h Flattened wave in N.F. (- 20). 15^h to 15 $\frac{2}{3}$ ^h Wave in N.F. (- 20). 15^h to 16^h Decrease in Dec. (- 5'). 16^h to 17^h Wave in N.F. (+ 20). 16^h to 17 $\frac{1}{2}$ ^h Wave in Dec. (- 4'). 18 $\frac{2}{3}$ ^h to 20 $\frac{1}{3}$ ^h Steep wave in Dec. (- 18'), with a secondary wave superposed at 19 $\frac{2}{3}$ ^h to 20 $\frac{1}{3}$ ^h (- 4'). 18 $\frac{3}{4}$ ^h to 20 $\frac{1}{3}$ ^h Irregular wave in N.F. (+ 75).
- 30^d 1 $\frac{1}{2}$ ^h to 3^h Wave in Dec. (+ 5').

1921.
October

- 1^d 0^h to 1^h Truncated wave in N.F. (- 25). 1^h to 3^h Wave in Dec. (+ 9'). 1^h to 2^h Decrease in V.F. (- 18). 6^h to 7^h Decrease in N.F. (- 25). 11^h to 13^h Wave in N.F. (- 35). 23^h to 24^h Wave in Dec. (+ 3').
- 2^d 20^h to 22^h Wave in Dec. (- 3').
- 3^d 0^h to 1^h Wave in Dec. (+ 3'). 22^h to 24^h Wave in Dec. (+ 3').
- 4^d 19^h to 19^h Wave in N.F. (+ 20). 20^h to 21^h Double wave in N.F. (\mp 15). 21^h to 22^h Wave in Dec. (- 3').
- 5^d 2^h to 4^h Wave in Dec. (- 3'). 17^h to 18^h Wave in N.F. (- 30), followed immediately till 19^h by a decrease (- 30). 17^h to 19^h Wave in Dec. (- 15'). 19^h to 21^h Steep wave in Dec. (- 16'). 17^h to 19^h Increase in V.F. (+ 20).
- 6^d 1^h to 2^h Decrease in Dec. (- 4'), recovering till 4^h. 1^h to 1^h Increase in N.F. (+ 20). 20^h to 21^h Two consecutive waves in Dec. (- 6', - 3'). 20^h to 21^h Wave in N.F. (+ 40) accompanied by a decrease in V.F. (- 15). 23^h to 7^h 1^h Increase in Dec. (+ 6').
- 7^d 1^h to 2^h Decrease in Dec. (- 3'). 19^h to 21^h Wave in Dec. (- 15'). 19^h to 20^h Double Wave in N.F. (\mp 20). 23^h to 8^d 1^h Domed wave in Dec. (- 9'), accompanied by irregular wave in N.F. (+ 35). 23^h to 24^h Decrease in V.F. (- 12).
- 8^d 1^h to 2^h Wave in Dec. (- 8'). 1^h to 2^h Wave in N.F. (+ 20), followed till 2^h by a decrease (- 25). 1^h to 1^h Decrease in V.F. (- 15). 2^h to 3^h Rapid increase in Dec. (+ 8'), followed till 3^h by a partial return (- 4'). 2^h to 3^h Irregular increase in N.F. (+ 65), followed till 9^h by a rapid general decrease (- 180) with waves at 7^h to 8^h (+ 25) and 8^h to 8^h (+ 35), superposed. 3^h to 5^h Flattened wave in V.F. (- 15), followed till 11^h by a steady increase (+ 80), accelerating after 10^h. 5^h to 5^h Rapid increase in Dec. (+ 10'). 6^h to 7^h Decrease in Dec. (- 5'). 7^h to 8^h Double wave in Dec. (\pm 3'). 9^h to 9^h Decrease in Dec. (- 5'). 10^h to 10^h Double wave in Dec. (\mp 3'), followed till 12^h by three consecutive waves (+ 3'). 9^h to 10^h Domed serrated wave in N.F. (+ 25). 10^h to 11^h Wave in N.F. (+ 20), followed till 14^h by a general increase (+ 90). 11^h to 13^h Decrease in V.F. (- 25). 13^h to 13^h Decrease in Dec. (- 4'). 17^h to 18^h Irregular decrease in Dec. (- 8'). 17^h to 22^h Flattened wave in V.F. (+ 25). 18^h to 19^h Double-crested wave in Dec. (+ 5'). 20^h to 21^h Irregular wave in Dec. (+ 4'). 20^h to 21^h Fluctuating increase in N.F. (+ 50). 21^h to 22^h Double-crested wave in Dec. (+ 4'). 22^h to 22^h wave in Dec. (+ 5'). 22^h to 9^d 1^h Wave in V.F. (- 30). 22^h to 23^h Double wave in N.F. (\pm 20). 22^h to 9^d 0^h Irregular wave in Dec. (+ 8').
- 9^d 2^h to 4^h Irregular wave in Dec. (+ 9'). 2^h to 3^h Decrease in V.F. (- 20), steadily recovering till 7^h. 3^h to 3^h Rapid increase in N.F. (+ 40), returning gradually till 6^h. 20^h to 20^h Rapid decrease in Dec. (- 6'), with immediate partial recovery (+ 3'). 20^h to 22^h Double-crested wave in N.F. (+ 20), the commencement very steep. 21^h to 22^h Wave in Dec. (+ 3').
- 10^d 16^h to 17^h Wave in N.F. (+ 20). 17^h to 18^h Irregular wave in Dec. (- 5').
- 11^d 5^h to 7^h Broad double-crested wave in Dec. (+ 4'). 15^h to 15^h Irregular decrease in Dec. (- 7'). 15^h to 16^h wave in N.F. (- 20). 15^h to 16^h Rapid increase in V.F. (+ 30). 17^h to 17^h Decrease in N.F. (- 20). 19^h to 19^h Truncated wave in N.F. (+ 20). 20^h to 22^h Two consecutive waves in Dec. (- 5', - 7'). 21^h to 22^h Truncated wave in N.F. (+ 20). 19^h to 23^h Steady decrease in V.F. (- 50). 22^h to 23^h Double-crested wave in N.F. (+ 30, + 25). 22^h to 23^h Rapid decrease in Dec. (- 15'), interrupted temporarily from 22^h to 23^h. 23^h to 12^d 0^h Wave in N.F. (+ 40).
- 12^d 0^h to 0^h Rapid increase in N.F. (+ 35), followed till 2^h by an irregular wave (+ 45). 0^h to 1^h Wave in Dec. (+ 4'). 1^h to 2^h Wave in Dec. (+ 9'). 1^h to 2^h Wave in V.F. (- 20). 2^h to 3^h Fluctuating increase in Dec. (+ 16'). 6^h to 7^h Decrease in N.F. (- 20). 16^h to 18^h Wave in Dec. (- 5'). 19^h to 20^h Wave in Dec. (- 9'). 19^h to 20^h Rapid increase in N.F. (+ 45), partially returning till 20^h (- 25). 23^h to 13^d 0^h Wave in Dec. (+ 3').
- 13^d 23^h to 14^d 1^h Two consecutive waves in Dec. (+ 2', + 3').
- 14^d 12^h to 13^h Wave in Dec. (+ 3'). 21^h to 22^h Wave in Dec. (- 4'), followed till 24^h by a fluctuating increase (+ 7'). 23^h to 15^d 1^h Irregular wave in N.F. (+ 30). 23^h to 15^d 1^h Wave in V.F. (- 15).
- 15^d 0^h to 1^h Wave in Dec. (- 6'). 13^h to 16^h Slow wave in N.F. (- 30). 13^h to 15^h Increase in V.F. (+ 25). 17^h to 18^h Irregular wave in Dec. (- 4'). 17^h to 18^h Irregular wave in N.F. (+ 20).
- 16^d 19^h to 20^h Two consecutive waves in Dec. (- 3'). 20^h to 21^h Wave in N.F. (+ 20).
- 17^d 19^h to 22^h Slow double-crested wave in Dec. (- 3', - 3').
- 20^d 19^h to 21^h Double-crested wave in Dec. (- 5', - 4').
- 21^d 6^h to 7^h Wave in Dec. (+ 3'). 6^h to 7^h Wave in N.F. (+ 20). 14^h to 16^h Wave in Dec. (- 12'), followed till 17^h by a decrease (- 5'), and then till 19^h by a double wave (- 4', + 3'). 14^h to 19^h A series of oscillations in N.F. (- 25, + 20, - 20, - 25). 13^h to 15^h Increase in V.F. (+ 30). 20^h to 22^h Wave in Dec. (- 7'), with a wave in N.F. (+ 25). 19^h to 21^h Decrease in V.F. (- 20).

- 1921.
- October**
- 22^d 18¹₄^h to 19²₄^h Irregular wave in N.F. (+ 30). 18¹₄^h to 20^h Serrated wave in Dec. (- 7'). 22^h to 23¹₄^h Wave in N.F. (+ 25). 22^h to 23¹₄^h Wave in Dec. (- 4'), the first part steep.
 - 23^d 4¹₄^h to 6¹₄^h Slow wave in Dec. (+ 3'). 17^h to 18^h Domed wave in Dec. (- 4'). 21^h to 21¹₄^h Wave in Dec. (- 5'). 21^h to 22¹₄^h Double-crested wave in N.F. (+ 20).
 - 24^d 9^h to 9¹₄^h Decrease in N.F. (- 20). 16¹₄^h to 17^h Wave in Dec. (- 3').
 - 16^h The new Vertical Force instrument was re-installed. Adjustments were being carried out until 29^d 12^h during which period the V.F. records were unreliable.
 - 25^d 0¹₄^h to 2^h Double wave in Dec. (\pm 3'). 0¹₄^h to 1¹₄^h Wave in N.F. (+ 20). 16¹₄^h to 17¹₄^h Wave in Dec. (- 4').
 - 26^d 13^h to 16^h Steady increase in N.F. (+ 30), followed till 17^h by a decrease (- 20). 18^h to 20¹₄^h Decrease in Dec. (- 8'). 22¹₄^h to 23¹₄^h Wave in Dec. (+ 3').
 - 27^d 2^h to 3¹₄^h Wave in Dec. (+ 4'). 9¹₄^h to 10^h Increase in Dec. (+ 4'). 12¹₄^h to 13¹₄^h Flattened wave in Dec. (+ 4'). 12¹₄^h to 15^h Wave in N.F. (- 45). 22^h to 23¹₄^h Wave in N.F. (+ 20). 21¹₄^h to 23¹₄^h Irregular wave in Dec. (- 7'), followed immediately by a further wave (+ 6'). 23¹₄^h to 28^d 1¹₄^h Wave in N.F. (+ 40).
 - 28^d 1^h to 2^h Wave in Dec. (- 3'). 18¹₄^h to 19¹₄^h Wave in Dec. (- 5'), followed till 21^h by a decrease (- 5'). 20¹₄^h to 21¹₄^h Wave in N.F. (+ 20). 21¹₄^h to 22¹₄^h Truncated wave in Dec. (- 5') with similar wave in N.F. (+ 20).
 - 29^d 11¹₄^h to 14^h Wave in N.F. (- 30). 12^h to 13^h Wave in Dec. (+ 3'). 18¹₄^h to 19¹₄^h Wave in Dec. (- 6'). 18¹₄^h to 19¹₄^h Wave in N.F. (+ 25). 23¹₄^h to 30^d 0¹₄^h Wave in N.F. (+ 20).
 - 30^d 9^h to 10¹₄^h Decrease in V.F. (- 15). 20¹₄^h to 22^h Wave in Dec. (- 3').
 - 31^d 17^h to 18¹₄^h Decrease in Dec. (- 7'). 17¹₄^h to 18¹₄^h Wave in N.F. (- 20). 19¹₄^h to 20¹₄^h Wave in Dec. (- 11'). 19¹₄^h to 20¹₄^h Wave in N.F. (+ 35). 21¹₄^h to 23^h Increase in N.F. (+ 25). 22¹₄^h to 24^h Irregular wave in Dec. (- 5').

November

 - 1^d 1¹₄^h to 4¹₄^h Double wave in Dec. (+ 5', - 3'), the first movement rather rapid. 1¹₄^h to 4¹₄^h Slow wave in N.F. double-crested (+ 25). 2^h to 2¹₄^h Decrease in V.F. (- 20).
 - 2^d 17^h to 17¹₄^h Wave in V.F. (+ 15), steep at the end.
 - 5^d 21¹₄^h to 22¹₄^h Rapid decrease in Dec. (- 11'), followed immediately till 23¹₄^h by a double wave (\pm 4'). 21¹₄^h to 23¹₄^h Wave in N.F. (+ 65). 22^h to 23^h Rapid decrease in V.F. (- 40), followed till 24^h by a wave (+ 15).
 - 6^d 0^h to 0¹₄^h Increase in Dec. (+ 5'). 1¹₄^h to 2¹₄^h Increase in Dec. (+ 7'). 2¹₄^h to 3¹₄^h Domed wave in Dec. (+ 4'). 5^h to 7^h Truncated wave in Dec. (+ 5'). 4¹₄^h to 7^h Wave in N.F. (- 35). 8^h to 8¹₄^h Increase in N.F. (+ 30), followed till 10¹₄^h by a decrease (- 50). 10^h to 14¹₄^h Steady increase in V.F. (+ 30). 14¹₄^h to 16^h Wave in Dec. (- 10'), with wave in V.F. (+ 25). 14¹₄^h to 15^h Wave in N.F. (+ 20), followed till 15¹₄^h by a rapid increase (+ 35). 17¹₄^h to 19^h Increase in N.F. (+ 30). 20^h to 21^h Irregular wave in Dec. (- 4'). 23¹₄^h to 7^d 0¹₄^h Wave in Dec. (+ 3').
 - 7^d 1¹₄^h to 3^h Wave in Dec. (- 4'). 1^h to 2^h Decrease in V.F. (- 15). 10¹₄^h to 11^h Increase in Dec. (+ 3') 16^h to 18^h Wave in Dec. (- 3'). 16¹₄^h to 18¹₄^h Wave in N.F. (+ 25). 18¹₄^h to 18¹₄^h Decrease in Dec. (- 3'). 21¹₄^h to 23^h Irregular wave in N.F. (+ 30). 21¹₄^h to 22¹₄^h Wave in Dec. (+ 4'). 21¹₄^h to 22¹₄^h Decrease in V.F. (- 15).
 - 8^d 0¹₄^h to 1¹₄^h Wave in Dec. (+ 5'). 1^h to 1¹₄^h Decrease in V.F. (- 15). 22^h to 24^h Irregular wave in Dec. (- 8'). 23^h to 24^h Irregular decrease in N.F. (- 25).
 - 9^d 2¹₄^h to 4^h Truncated wave in Dec. (+ 4'), the first movement rapid. 17¹₄^h to 18¹₄^h Wave in N.F. (+ 20). 21¹₄^h to 22^h Wave in Dec. (- 3'). 21¹₄^h to 23¹₄^h Serrated wave in N.F. (+ 30). 22^h to 24^h Irregular serrated wave in Dec. (- 8'), the first part steep.
 - 10^d 8¹₄^h to 10^h Decrease in N.F. (- 30). 11^h to 12^h Increase in Dec. (+ 5'). 13^h to 15^h Increase in V.F. (+ 30). 13¹₄^h to 14¹₄^h Wave in Dec. (+ 3'). 14^h to 15¹₄^h Serrated wave in N.F. (- 40). 21^h to 22¹₄^h Wave in Dec. (- 3').
 - 11^d 23¹₄^h to 12^d 1^h Wave in Dec. (+ 4').
 - 12^d 0^h to 1^h Decrease in V.F. (- 12).
 - 13^d 17^h to 18^h Increase in N.F. (+ 20). 20¹₄^h to 21^h Very rapid decrease in Dec. (- 6'), recovering by 23^h. 23¹₄^h to 14^d 1¹₄^h Irregular wave in N.F. (+ 45). 23¹₄^h to 14^d 0¹₄^h Irregular decrease in Dec. (- 10'), recovering by 14^d 4^h, with corresponding movement in V.F. (- 25).

1921

November 14^d 17¹₄^h to 18¹₄^h Truncated wave in Dec. (- 3'), followed till 19¹₄^h by a double-crested wave (- 3').

15^d 20¹₄^h to 21¹₄^h Decrease in Dec. (- 6').

16^d 6¹₄^h to 9^h Double-crested wave in N.F. (- 40). 7¹₂^h to 9¹₂^h Serrated, truncated wave in Dec. (+ 4'). 11¹₂^h to 11¹₄^h Rapid increase in Dec. (+ 4'). 11^h to 13^h Increase in V.F. (+ 15), followed till 13¹₂^h by a further rapid increase, temporarily interrupted at 13¹₄^h (+ 20). 13^h to 14^h Truncated wave in N.F. (- 60). 13^h Sudden decrease in Dec. (- 4'), followed till 14^h by a double-crested wave (+ 3', + 4'). 16¹₂^h to 19¹₂^h General decrease in N.F. (- 70). 18^h to 18¹₂^h Decrease in Dec. (- 7'). 19^h to 19¹₄^h Increase in Dec. (+ 3'), followed till 20^h by a steep wave (- 11'). 19¹₂^h to 20¹₄^h Two consecutive waves in N.F. (+ 70, + 90), the second commencing before the first was completed. 18^h to 19¹₄^h Steady increase in V.F. (+ 25), followed till 19¹₄^h by a general decrease (- 40), interrupted at 20¹₄^h. 20^h to 20¹₄^h Sharp decrease in Dec. (- 3'), followed till 22¹₂^h by a double wave (+ 19', - 16'), the first very steep. 20¹₂^h to 21¹₂^h Rapid increase in N.F. (+ 80), with a wave superposed at 21^h (- 20), followed till 23^h by a steady decrease (- 40). 21^h to 21¹₄^h Wave in V.F. (- 12). 22¹₄^h to 17^d 1¹₄^h General increase in Dec. (+ 14'), with a wave superposed at 17^d 0^h to 0¹₂^h (+ 4').

17^d 0¹₄^h to 1¹₂^h Rapid decrease in V.F. (- 55), recovering rapidly at first, till 2¹₂^h, then more gradually, till 5^h. 1¹₂^h to 1²₄^h Rapid decrease in Dec. (- 13'), followed, after a small double wave, by a rapid partial recovery till 2¹₂^h (+ 7'). 1²₄^h to 2^h Wave in N.F. (+ 25). 3¹₄^h to 3¹₂^h Decrease in N.F. (- 20). 4¹₂^h to 7^h Broad slightly truncated wave in N.F. (+ 30). 5¹₂^h to 9^h Broad truncated wave in Dec. (+ 9'). 9^h to 14¹₄^h No register of Dec., N.F., and V.F. 14¹₄^h to 15¹₄^h Rapid increase in N.F. (+ 40), followed till 16¹₄^h by a steep wave (- 60). 15^h to 15¹₄^h Double wave in Dec. (± 3'). 15^h to 17^h Wave in V.F. (- 12). 17^h to 17¹₄^h Increase in N.F. (+ 20). 20¹₄^h to 22¹₄^h Double-crested wave in Dec. (- 15', - 19'). 20^h to 23^h Double-crested wave in N.F. (+ 50, + 60). 22¹₄^h to 23¹₂^h Wave in Dec. (- 5').

18^d 4^h to 5^h Wave in N.F. (- 20). 6^h to 7^h Increase in N.F. (+ 25), followed till 8¹₄^h by an irregular decrease (- 30). 10¹₄^h to 11¹₂^h Decrease in N.F. (- 30). 14¹₄^h to 15¹₄^h Increase in N.F. (+ 35), with a small wave superposed at 14¹₄^h (- 15). 14¹₂^h to 16¹₄^h Two consecutive waves in Dec. (- 3', - 4'). 15¹₄^h to 15¹₂^h Wave in N.F. (- 20). 18¹₄^h to 20¹₄^h Flattened serrated wave in N.F. (+ 50), the decline rather rapid. 18^h to 18¹₂^h Rapid decrease in Dec. (- 8'), followed till 19¹₂^h by an irregular wave (+ 4'), and then by a general increase till 23^h (+ 10'), with six consecutive waves superposed (+ 3', + 4', + 3', + 2', + 4', + 3'). 20¹₂^h to 21¹₄^h Sharp wave in N.F. (+ 30). 22^h to 22¹₂^h Sharp wave in N.F. (+ 25).

19^d 10^h to 13^h Wave in N.F. (- 30). 13¹₂^h to 15¹₂^h Double-crested wave in Dec. (- 3'), followed till 17^h by a further wave (- 10'). 16^h to 17¹₂^h Decrease in V.F. (- 12).

20^d 15¹₄^h to 17^h Irregular wave in Dec. (- 4').

21^d 0¹₂^h to 1²₄^h Wave in Dec. (- 3'). 13^h to 14¹₄^h Wave in N.F. (+ 20). 13^h to 14^h Wave in Dec. (- 3'), followed till 15¹₄^h by a decrease (- 5'). 18^h to 19¹₄^h Wave in Dec. (- 6'). 23¹₄^h to 24^h Wave in Dec. (+ 5').

22^d 16¹₂^h to 17¹₄^h Wave in Dec. (- 6'). 17¹₂^h to 18¹₄^h Wave in N.F. (- 20). 18^h to 19¹₄^h Irregular wave in Dec. (- 7').

23^d 18¹₄^h to 19^h Very rapid decrease in Dec. (- 15'), followed till 19¹₄^h by rapid partial recovery (+ 8'). 18¹₂^h to 20^h Steep wave in N.F. (+ 80). 19¹₂^h to 20¹₄^h Wave in Dec. (- 3'). 21^h to 21¹₄^h Wave in N.F. (- 20), the return continuing further till 22^h (+ 20). 22^h to 23^h Increase in Dec. (+ 5'). 23^h to 24^d 0¹₂^h Decrease in V.F. (- 15). 23^h to 24^d 1¹₄^h Flattened wave in N.F. (+ 20).

24^d 0¹₄^h to 2^h Wave in Dec. (- 6').

25^d 0^h to 1¹₄^h Wave in N.F. (+ 20), the rise rather rapid. 18¹₄^h to 19¹₄^h Wave in Dec. (- 6').

26^d 12^h to 14^h Increase in V.F. (+ 25).

28^d 1¹₄^h to 3¹₄^h Double wave in Dec. (± 3'). 1¹₂^h to 2¹₄^h Increase in N.F. (+ 25).

28^d 10¹₄^h to 29^d 11¹₄^h No register of V.F.

December 1^d 1^h to 2^h Increase in Dec. (+ 5').

2^d 5¹₄^h to 7^h Wave in N.F. (- 20), followed till 9¹₄^h by a decrease (- 40). 6^h to 7^h Wave in Dec. (+ 3'). 22¹₄^h to 23¹₂^h Increase in Dec. (+ 3').

3^d 0¹₄^h to 2^h Wave in Dec. (+ 7'). 1^h to 2^h Wave in N.F. (+ 25), the first part rather steep. 1^h to 1²₄^h Decrease in V.F. (- 15).

4^d 13¹₄^h to 14¹₄^h Decrease in Dec. (- 3').

- 1921
 December 10^d 0^{1h} to 2^{1h} Wave in N.F. (+ 22). 0^{1h} to 2^{1h} Wave in Dec. (- 6'). 22^h to 22^{1h} Wave in Dec. (- 5'). 22^{1h} to 23^h Wave in N.F. (+ 20).
- 11^d 18^{1h} to 20^h Wave in Dec. (- 8'). 18^h to 18^{1h} Decrease in N.F. (- 25). 18^{1h} to 19^{1h} Increase in V.F. (+ 12). 20^{1h} to 22^h Increase in N.F. (+ 25).
- 12^d 0^{1h} to 1^{1h} Wave in Dec. (- 4'). 4^{1h} to 5^h Wave in Dec. (+ 9'). 4^{1h} to 4^{1h} Very rapid increase in N.F. (+ 85), returning (with minor oscillations) till 8^{1h}. 4^{1h} to 5^h Decrease in V.F. (- 20). 5^{1h} to 6^{1h} Rapid oscillating increase in Dec. (+ 10'), with partial return till 7^{1h} (- 5'), followed till 8^{1h} by a wave (+ 3'). 9^h to 10^h Increase in N.F. (+ 30). 9^h to 10^{1h} Flattened serrated wave in Dec. (- 3'). 11^h to 13^{1h} Wave in N.F. (- 40). 11^{1h} to 12^h Wave in Dec. (+ 4'). 17^h to 19^{1h} Wave in Dec. (- 8'). 20^h to 21^{1h} Double wave in Dec. (- 9'), the first part very steep. 20^h to 22^h Double wave in N.F. (+ 40, - 20), the first part steep. 20^{1h} to 21^h Decrease in V.F. (- 15). 22^{1h} to 23^h Increase in Dec. (+ 3'). 23^{1h} to 13^d 1^{1h} Two consecutive waves in Dec. (+ 6', + 5'). 23^h to 13^d 1^h General decrease in V.F. (- 20).
- 13^d 2^{1h} to 3^{1h} Wave in Dec. (+ 4'). 9^{1h} to 10^{1h} Wave in Dec. (- 4'). 11^{1h} to 14^h Increase in V.F. (+ 30). 12^{1h} to 14^h Wave in N.F. (- 45). 12^{1h} to 14^h Double wave in Dec. (+ 5', - 7'). 14^{1h} to 15^h Increase in Dec. (+ 4'). 15^{1h} to 17^{1h} Double wave in N.F. (- 40). 16^h to 17^h Sharp wave in Dec. (- 19'), followed immediately till 17^{1h} by a second wave (- 3'). 17^{1h} to 18^{1h} Irregular wave in N.F. (- 30). 18^{1h} to 19^h Wave in Dec. (- 6'). 18^{1h} to 19^{1h} Wave in N.F. (- 20). 19^h to 19^{1h} Decrease in Dec. (- 6') with partial recovery till 19^{1h} (+ 3'). 19^{1h} to 21^{1h} Decrease in V.F. (- 25). 20^h to 20^{1h} Rapid increase in N.F. (+ 70) succeeded till 22^{1h} by a general decrease (- 75) with three consecutive waves, superposed from 21^h to 22^{1h} (+ 30, + 20, + 20). 20^h to 21^h Wave in Dec. (- 9'). 21^h to 21^{1h} Two consecutive waves in Dec. (- 4'). 21^{1h} to 23^{1h} Double-crested wave in Dec. (- 5').
- 14^d 0^{1h} to 0^{3h} Rapid increase in Dec. (+ 6'). 11^h to 12^h Wave in Dec. (+ 3'). 20^h to 21^h Wave in Dec. (- 5').
- 15^d 1^{1h} to 3^h Wave in Dec. (+ 6'), the first movement very rapid.
- 16^d 0^h to 1^{1h} Accelerated decrease in V.F. (- 15). 0^{1h} to 1^{2h} Wave in Dec. (+ 4'). 0^{1h} to 1^{1h} Increase in N.F. (+ 20). 1^{1h} to 3^{1h} Double-crested wave in Dec. (- 5', - 6'), followed till 4^{1h} by a further wave (- 4'). 2^{1h} to 5^h Broad irregular wave in N.F. (- 25). 7^h to 9^{1h} Flattened wave in Dec. (+ 3'). 11^h to 12^h Domed, serrated wave in N.F. (- 20). 13^h to 15^h Increase in V.F. (+ 30). 14^h to 14^{1h} Wave in N.F. (- 25), the return continuing further till 15^h (+ 20). 14^{1h} to 15^{1h} Wave in Dec. (- 10'). 15^{1h} to 15^{1h} Rapid decrease in Dec. (- 6'), recovering, generally, with minor oscillations by 17^h. 15^{1h} to 15^{1h} Rapid decrease in N.F. (- 40), followed till 16^h by a small irregular wave (+ 20). 18^h to 18^{1h} Domed wave in N.F. (- 20). 18^h to 18^{1h} Decrease in Dec. (- 7'). 19^h to 20^{1h} Steep wave in Dec. (- 15'). 19^h to 20^h Double wave in N.F. (- 20, + 40). 19^h to 17^d 1^{1h} Steady decrease in V.F. (- 40). 23^h to 17^d 0^{1h} Domed wave in Dec. (- 4').
- 17^d 0^{1h} to 1^{1h} Wave in N.F. (+ 20). 3^h to 4^{1h} Increase in Dec. (+ 6'). 16^{1h} to 17^h Wave in Dec. (- 3'). 16^{1h} to 16^{1h} Increase in N.F. (+ 20). 17^{1h} to 19^{1h} Wave in Dec. (- 9'). 18^h to 19^h Irregular wave in N.F. (+ 20). 23^{1h} to 18^d 0^{1h} Sharp wave in Dec. (+ 8'). 23^{1h} to 18^d 1^h Wave in N.F. (+ 25). 23^{1h} to 18^d 0^{1h} Rapid decrease in V.F. (- 20).
- 18^d 0^{1h} to 3^h Increase in Dec. (+ 6').
- 22^d 17^{1h} to 19^h Wave in Dec. (- 6'). 17^{1h} to 19^{1h} Wave in N.F. (+ 30). 19^{1h} to 20^{1h} Accelerated decrease in Dec. (- 10'). 20^h to 21^{1h} Double wave in N.F. (- 20). 23^h to 24^h Wave in Dec. (- 3'). 23^h to 23^d 0^{1h} Decrease in N.F. (- 30).
- 23^d 0^h to 3^h Decrease in V.F. (- 15). 0^{1h} to 0^{3h} Increase in N.F. (+ 30). 0^{1h} to 2^{1h} Three successive waves in Dec. of increasing amplitude, the last truncated (- 3'), followed from 2^{1h} to 4^h by a steep wave (+ 17'). 2^h to 3^{1h} Wave in N.F. (- 40). 3^h to 5^h Wave in V.F. (- 25). 21^{1h} to 22^{1h} Wave in N.F. (- 20). 21^{1h} to 22^h Rapid decrease in Dec. (- 8'), with irregular partial return till 22^{1h} (+ 4').
- 24^d 2^{1h} to 2^{1h} Decrease in Dec. (- 4'). 4^h to 4^{1h} Increase in Dec. (+ 4'). 18^h to 18^{1h} Decrease in Dec. (- 5'). 18^{1h} to 19^{1h} Double-crested wave in N.F. (+ 20, + 25). 19^{1h} to 19^{1h} Wave in Dec. (+ 3'). 21^{1h} to 22^{1h} Wave in Dec. (- 3').
- 26^d 16^{1d} to 17^{1h} Wave in N.F. (- 25). 17^h to 18^h Wave in Dec. (- 5'). 18^h to 18^{1h} Wave in N.F. (- 20). 18^{1h} to 19^h Wave in Dec. (- 4'). 19^{1h} to 20^{1h} Sharp wave in Dec. (+ 5'). 19^{1h} to 20^{1h} Truncated wave in N.F. (- 20). 22^{1h} to 24^h Wave in Dec. (- 5'), the first movement rather rapid. 22^{1h} to 23^{1h} Increase in N.F. (+ 25). 23^{1h} to 27^d 2^{1h} Slow wave in N.F. (- 25).
- 27^d 0^{1h} to 3^h Wave in Dec. (+ 9'). 1^h to 2^{1h} Decrease in V.F. (- 15). 10^{1h} to 11^{1h} Increase in Dec. (+ 5').

1921

- December**
- 28^d 3^h to 4¹₂^h Wave in N.F. (+ 30). 3^h to 3¹₂^h Decrease in Dec. (- 4'), followed till 5¹₂^h by a domed wave (+ 11'), with a small wave superposed at 4¹₂^h to 4³₂^h (+ 3'). 3^h to 5¹₂^h Fluctuating decrease in V.F. (- 35), followed till 9^h by a steady recovery. 4¹₂^h to 6¹₂^h Irregular double-crested wave in N.F. (+ 30, + 40). 5¹₂^h to 8^h Flattened wave in Dec. (+ 5'). 9¹₂^h to 11^h Oscillating increase in Dec. (+ 7'). 11¹₂^h to 12¹₂^h Serrated wave in Dec. (+ 4'). 12^h to 12¹₂^h Oscillating decrease in N.F. (- 25). 13^h to 16^h Wave in N.F. (- 60) with several oscillations superposed. 13¹₂^h to 15^h Three consecutive waves in Dec. (- 3', - 3', - 4'). 14^h to 14¹₂^h Increase in V.F. (+ 30). 15^h to 17^h Oscillating decrease in Dec. (- 10'). 18^h to 19¹₂^h Double wave in N.F. (+ 40). 18¹₂^h to 20^h Two consecutive waves in Dec. (- 9', - 9'). 22^h to 29^d 0¹₂^h Double wave in N.F. (+ 40), the first part truncated, the second part serrated. 22^h to 23¹₂^h Irregular double-crested wave in Dec. (- 8', - 10'). 22^h to 22¹₂^h Decrease in V.F. (- 12). 23¹₂^h to 24^h Decrease in V.F. (- 20). 23¹₂^h to 24^h Rapid decrease in Dec. (- 7').
- 29^d 0^h to 1^h Wave in Dec. (+ 4'). 1^h to 3¹₂^h General increase in Dec. (+ 8'), with waves superposed at 1¹₂^h to 2^h (+ 4'), and 2¹₂^h to 3^h (+ 5'). 1^h to 2¹₂^h Wave in N.F. (- 35). 3^h to 5^h Increase in V.F. (+ 25). 4^h to 5^h Domed wave in Dec. (- 3'). 7¹₂^h to 8^h Sharp decrease in N.F. (- 40). 10^h to 10¹₂^h Rapid decrease in N.F. (- 50) with partial recovery till 11^h (+ 25). 11¹₂^h to 12¹₂^h Wave in N.F. (+ 20). 12¹₂^h to 13¹₂^h Increase in N.F. (+ 35). 14¹₂^h to 15¹₂^h Increase in N.F. (+ 25). 17^h to 18^h Wave in N.F. (- 30). 17^h to 18¹₂^h Wave in Dec. (- 11'). 17¹₂^h to 17¹₂^h Increase in V.F. (+ 12). 18¹₂^h to 19¹₂^h Increase in N.F. (+ 30). 20^h to 21¹₂^h Two consecutive waves in Dec. (- 6', - 6'). 20^h to 21¹₂^h Triple wave in N.F. (- 20, + 20, - 20), the middle part truncated. 20¹₂^h to 22^h Irregular decrease in V.F. (- 12).
- 30^d 0^h to 1¹₂^h Oscillating increase in Dec. (+ 6'). 1^h to 3^h Wave in V.F. (- 12). 1¹₂^h to 2¹₂^h Wave in N.F. (+ 20). 2^h to 2¹₂^h Decrease in Dec. (- 3'). 19¹₂^h to 21¹₂^h Truncated wave in Dec. (- 5'), followed till 22^h by a further wave (- 3'). 20^h to 21¹₂^h Two consecutive waves in N.F. (+ 25, + 30). 23^h to 24^h Irregular decrease in N.F. (- 25), with a wave in Dec. (- 4').

EXPLANATION OF THE PLATES.

The magnetic motions figured on the Plates are those for days of disturbance selected by the International Committee—May 13^d 12^h to 14^d 12^h; May 14^d 15^h to 15^d 15^h; May 15^d 15^h to 16^d 15^h.

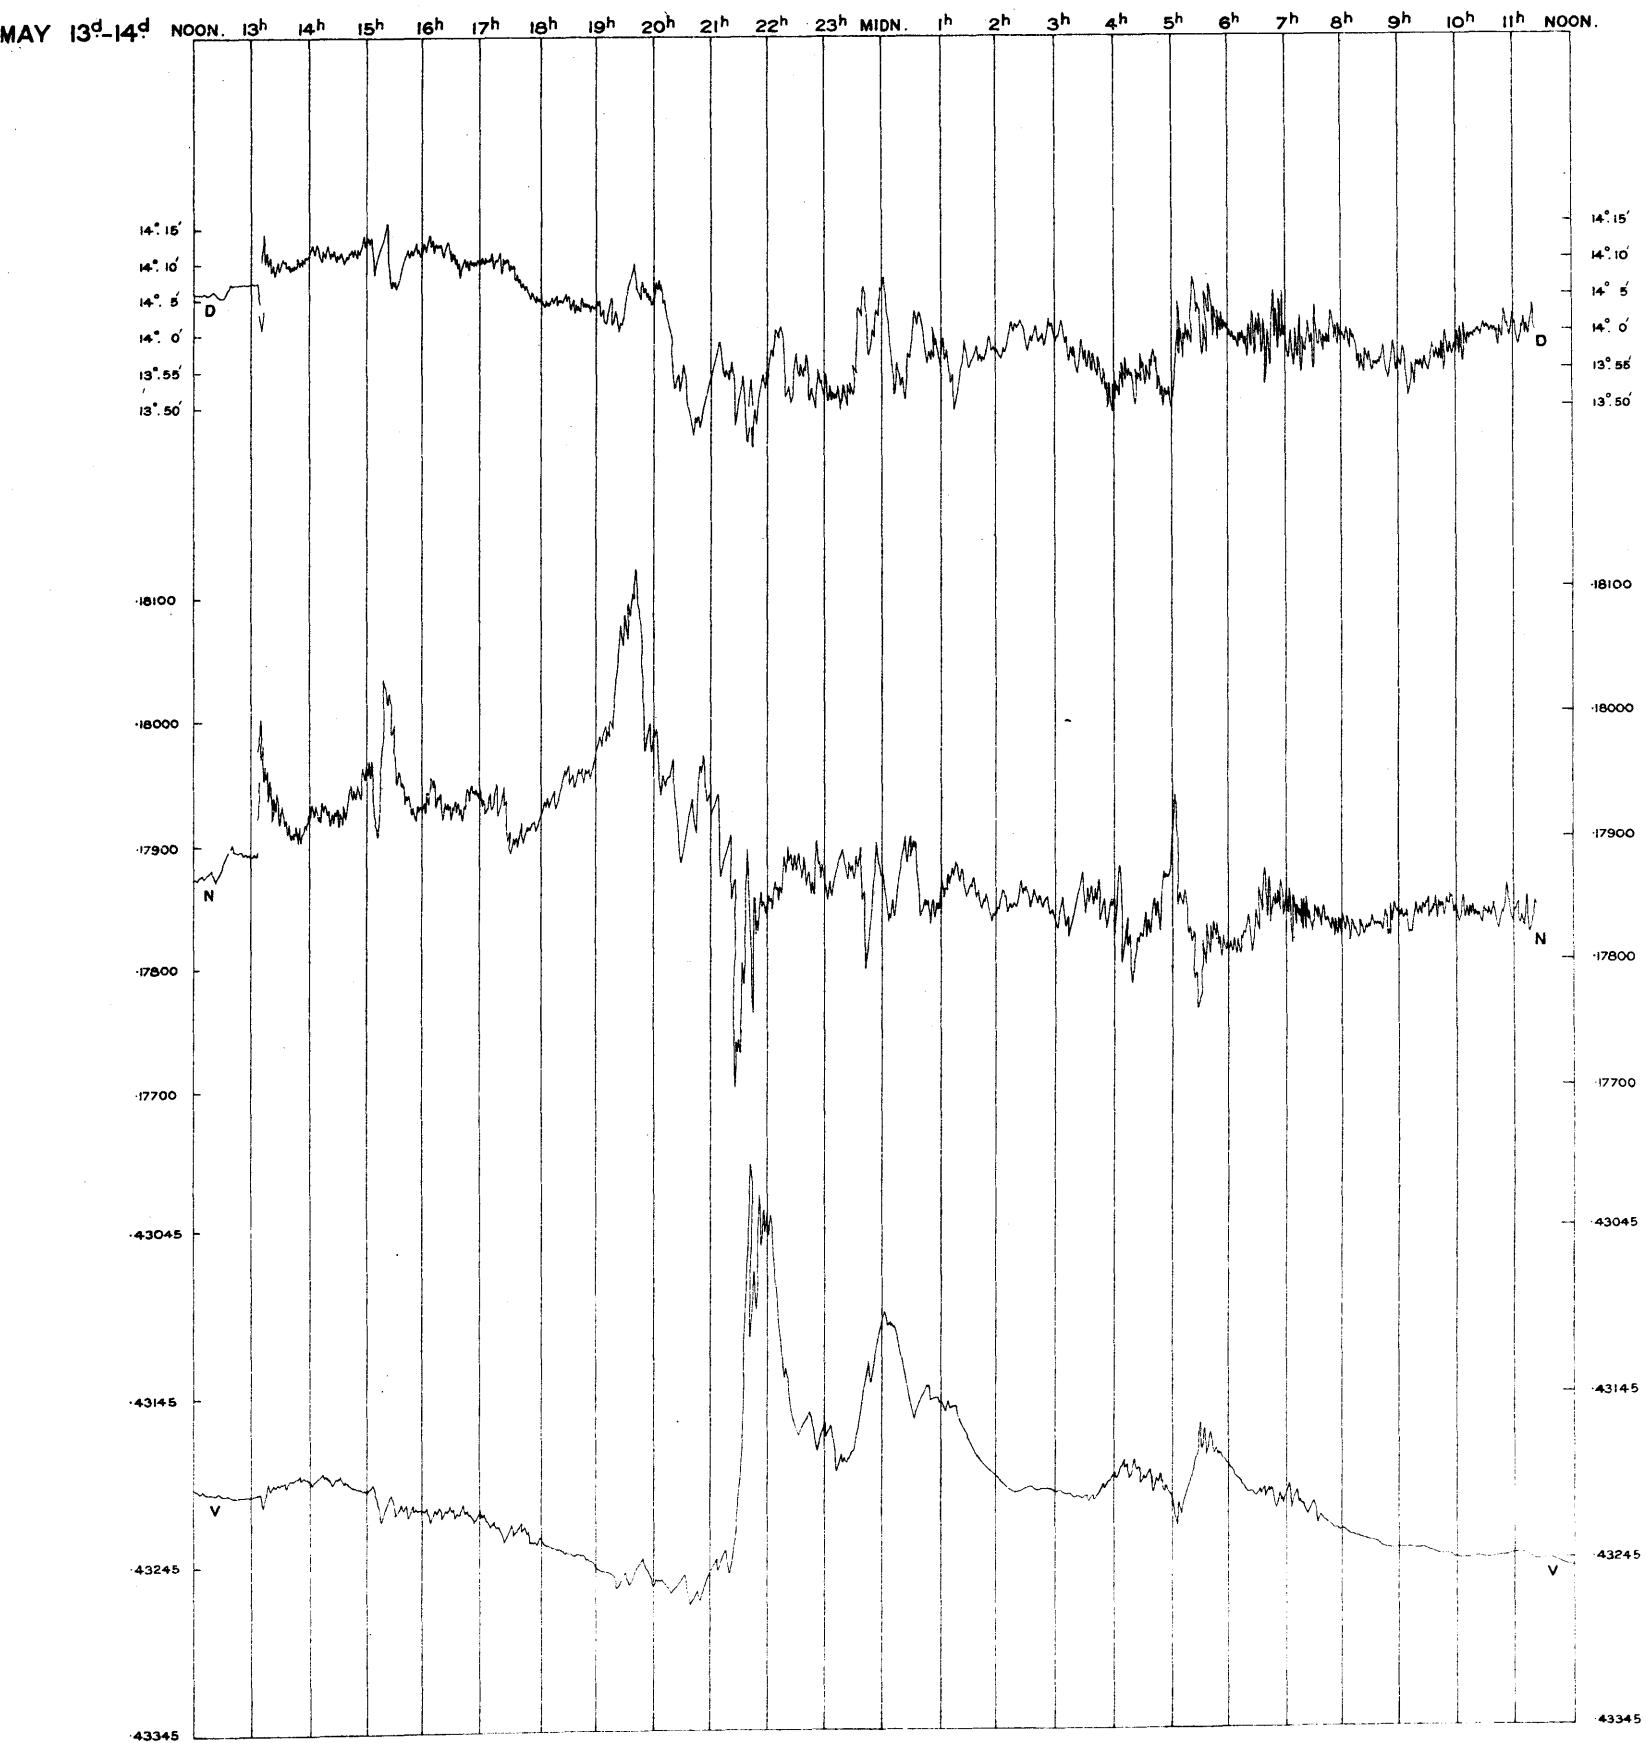

The time is Greenwich Civil Time (commencing at midnight, and counting the hours from 0 to 24).

The magnetic declination, north force, and vertical force are indicated by the letters D., N., and V. respectively; the declination (west) is expressed in arc, the unit for north and vertical force is γ (0.00001 C.G.S.), the corresponding scales being given on the sides of each diagram. Equal changes of amplitude in the several registers correspond nearly to equal changes of absolute magnetic force, 0.001 of a C.G.S. unit being represented by $0^{in}.70 = 17.7$ in the declination curve, by $0^{in}.64 = 16.3$ in the north force curve, and by $0^{in}.87 = 22.0$ in the vertical force curve.

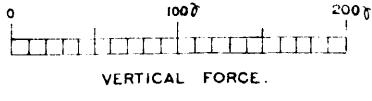

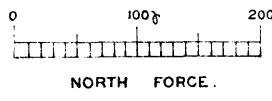

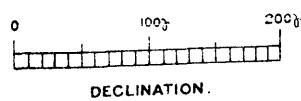

Upward motion indicates increase of declination and north force, and decrease of vertical force.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrica Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

*Rainfall (Column 16). The amounts entered on January 14 and 15 were derived from frost.

The mean reading of the Barometer for the month was 29^{in.} 808, being 0^{in.} 014 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 56°.1 on January 9; the lowest in the month was 29°.1 on January 15; and the range was 27°.0.

The mean of all the highest daily readings in the month was 50°.0, being 7°.0 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 41°.0, being 7°.3 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 9°.0, being 0°.4 less than the average for the 65 years, 1841-1905.

The mean for the month was 46°.1, being 7°.5 higher than the average for the 65 years, 1841-1905.

The mean Temperature of Evaporation for the month was $44^{\circ}0$, being $6^{\circ}8$ higher than the mean Temperature of the Dew Point for the month was $41^{\circ}5$, being $6^{\circ}0$ higher than

The mean Degree of Humidity for the month was $84^{\circ}6$, being $3^{\circ}4$ less than

The mean Elastic force of Vapour for the month was $0^{\text{in}}.262$, being $0^{\text{in}}.056$ greater than

The mean Weight of Vapour in a Cubic Foot of Air for the month was $3^{\text{grs}}.1$, being $0^{\text{grs}}.7$ greater than

The mean Weight of a Cubic Foot of Air for the month was 545 grains, being 9 grains less than

The mean amount of Cloud for the month (a clear sky being represented by 0 and an overcast sky by 10) was 8.1.

The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0.113. The maximum daily amount of Sunshine was 5.4 hours on January 16.

The highest reading of the Solar Radiation Thermometer was $75^{\circ}8$ on January 21; and the lowest reading of the Terrestrial Radiation Thermometer was $21^{\circ}0$ on January 16.

The Proportions of Wind referred to the cardinal points were N. 3, E. 0, S. 10, W. 16. Two days were calm.

The Greatest Pressure of the Wind in the month was 19.2 lbs. on the square foot on January 18. The mean daily Horizontal Movement of the Air for the month was 394 miles; the greatest daily value was 895 miles on January 8; and the least daily value was 114 miles on January 15.

Rain ($0^{\text{in}}.005$ or over) fell on 18 days in the month, amounting to $1^{\text{in}}.739$ as measured by gauge No. 6 partly sunk below the ground; being $0^{\text{in}}.142$ less than the average fall for the 65 years, 1841-1905.

} the average for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

*Rainfall (Column 16). The amounts entered on February 21 and 22 were derived from frost.

The mean reading of the Barometer for the month was 30^{in.}.107, being 0^{in.}.305 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR

The highest in the month was 61^o.6 on February 24; the lowest in the month was 26^o.6 on February 27; and the range was 35^o.0.

The mean of all the highest daily readings in the month was 47^o.8, being 2^o.6 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 35^o.0, being 0^o.8 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 12^o.8, being 1^o.8 greater than the average for the 65 years, 1841-1905.

The mean for the month was 41^o.0, being 1^o.5 higher than the average for the 65 years, 1841-1905.

Daily Duration of Sunshine.
Sun above Horizon.

The mean Temperature of Evaporation for the month was $38^{\circ} 5$, being $0^{\circ} 8$ higher than the mean Temperature of the Dew Point for the month was $35^{\circ} 4$, being equal to the mean Degree of Humidity for the month was $81 \cdot 1$, being $4 \cdot 4$ less than the mean Elastic Force of Vapour for the month was $0^{\text{in}}.207$, being equal to the mean Weight of Vapour in a Cubic Foot of Air for the month was $2^{\text{gr}}.4$, being equal to the mean Weight of a Cubic Foot of Air for the month was 557 grains, being 4 grains greater than the mean amount of Cloud for the month (a clear sky being represented by 0 and an overcast sky by 10) was 7.1. The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0.220. The maximum daily amount of Sunshine was 8.3 hours on February 21. The highest reading of the Solar Radiation Thermometer was $110^{\circ} 5$ on February 24; and the lowest reading of the Terrestrial Radiation Thermometer was $19^{\circ} 7$ on February 27. The Proportions of Wind referred to the cardinal points were N. 6, E. 7, S. 4, W. 4. Seven days were calm. The Greatest Pressure of the Wind in the month was 4.4 lbs. on the square foot on February 25. The mean daily Horizontal Movement of the Air for the month was 226 miles; the greatest daily value was 394 miles on February 15; and the least daily value was 85 miles on February 8. Rain ($0^{\text{in}}.005$ or over) fell on 5 days in the month, amounting to $0^{\text{in}}.124$ as measured by gauge No. 6 partly sunk below the ground; being $1^{\text{in}}.356$ less than the average fall for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit).	TEMPERATURE.						Difference between the Air Temperature and Dew Point Temperature.	Degree of Humidity (Saturation = 100).	TEMPERATURE.			Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the Ground.	Electricity.	hours. Daily Duration of Sunshine.	hours. Sun above Horizon.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn on the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

*Rainfall (Column 16). The amounts entered on March 3 and 8 were partly derived from frost.

The mean reading of the Barometer for the month was 29.881, being 0.135 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 67.3 on March 24; the lowest in the month was 27.0 on March 8; and the range was 40.0.

The mean of all the highest daily readings in the month was 55.2, being 5.4 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 38.0, being 2.9 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 17.2, being 2.5 greater than the average for the 65 years, 1841-1905.

The mean for the month was 46.1, being 4.2 higher than the average for the 65 years, 1841-1905.

The mean Temperature of Evaporation for the month was $42^{\circ} \cdot 5$, being $3^{\circ} \cdot 1$ higher than
The mean Temperature of the Dew Point for the month was $38^{\circ} \cdot 4$, being $2^{\circ} \cdot 1$ higher than

The mean Degree of Humidity for the month was $75 \cdot 1$, being $5 \cdot 4$ less than

The mean Elastic Force of Vapour for the month was $0 \text{ in. } 232$ being $0 \text{ in. } 0 \cdot 18$ greater than

The mean Weight of Vapour in a Cubic Foot of Air for the month was $2 \text{ grs. } 7$, being $0 \text{ grs. } 2$ greater than

The mean Weight of a Cubic Foot of Air for the month was 547 grains, being 2 grains less than

The mean amount of Cloud for the month (a clear sky being represented by o and an overcast sky by 10) was $6 \cdot 6$.

The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was $0 \cdot 378$. The maximum daily amount of Sunshine was $10 \cdot 7$ hours on March 25.

The highest reading of the Solar Radiation Thermometer was $121^{\circ} \cdot 4$ on March 24; and the lowest reading of the Terrestrial Radiation Thermometer was $19^{\circ} \cdot 7$ on March 25.

The Proportions of Wind referred to the cardinal points were N. 3, E. 0, S. 13, W. 14. One day was calm.

The Greatest Pressure of the Wind in the month was $8 \cdot 2$ lbs. on the square foot on March 14. The mean daily Horizontal Movement of the Air for the month was 340 miles; the greatest daily value was 556 miles on March 4; and the least daily value was 188 miles on March 25.

Rain ($0 \text{ in. } 005$ or over) fell on 17 days in the month, amounting to $1 \text{ in. } 209$, as measured by gauge No. 6 partly sunk below the ground; being $0 \text{ in. } 311$ less than the average fall for the 65 years, 1841-1905.

} the average for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit),	TEMPERATURE.						Difference between the Air Temperature and Dew Point Temperature.			TEMPERATURE.			Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the Ground.			Electricity.		Daily Duration of Sunshine. Sun above Horizon.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29.931, being 0.183 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 72.9 on April 13; the lowest in the month was 28.1 on April 20; and the range was 44.8. The mean of all the highest daily readings in the month was 59.3, being 2.1 higher than the average for the 65 years, 1841-1905. The mean of all the lowest daily readings in the month was 38.7, being 0.3 lower than the average for the 65 years, 1841-1905. The mean of the daily ranges was 20.6, being 2.4 greater than the average for the 65 years, 1841-1905. The mean for the month was 47.9, being 0.6 higher than the average for the 65 years, 1841-1905.

The mean Temperature of Evaporation for the month was $43^{\circ}6$, being $0^{\circ}3$ lower than the mean Temperature of the Dew Point for the month was $38^{\circ}9$, being $1^{\circ}2$ lower than the mean Degree of Humidity for the month was $71^{\circ}7$, being $4^{\circ}1$ less than the mean Elastic Force of Vapour for the month was $0^{in}237$, being $0^{in}011$ less than the mean Weight of Vapour in a Cubic Foot of Air for the month was $2^{in}7$, being $0^{in}2$ less than the mean Weight of a Cubic Foot of Air for the month was 546 grains, being 3 grains greater than the mean amount of Cloud for the month (a clear sky being represented by o and an overcast sky by 10) was $5^{\circ}2$. The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was $0^{\circ}487$. The maximum daily amount of Sunshine was $13^{\circ}6$ hours on April 29.

The highest reading of the Solar Radiation Thermometer was $133^{\circ}3$ on April 28; and the lowest reading of the Terrestrial Radiation Thermometer was $21^{\circ}8$ on April 20. The Proportions of Wind referred to the cardinal points were N. 10, E. 8, S. 2, W. 5. Five days were calm. The Greatest Pressure of the Wind in the month was 10.6 lbs. on the square foot on April 8. The mean daily Horizontal Movement of the Air for the month was 267 miles; the greatest daily value was 520 miles on April 14; and the least daily value was 99 miles on April 2. Rain ($0^{in}005$ or over) fell on 9 days in the month, amounting to $1^{in}196$, as measured by gauge No. 6 partly sunk below the ground; being $0^{in}370$ less than the average fall for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit),	TEMPERATURE.							Difference between the Air Temperature and Dew Point Temperature.			TEMPERATURE.			Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the Ground.	Electricity.	Daily Duration of Sunshine.	Sun above Horizon.		
		Of the Air.				Of Evapo- ration.	Of the Dew Point.	Degree of Humidity (Saturation = 100).			Of Radiation.		Of the Earth 4 ft. below the Surface of the Soil.							
		Highest.	Lowest.	Daily Range.	Mean of 24 Hourly Values.	Excess above Average of 65 Years.	Mean of 24 Hourly Values.	Dedu- cted Mean Daily Value.	Mean.	Greatest.	Least.	Highest in Sun's Rays.	Lowest on the Grass.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records.

The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13 and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29.786, being 0.008 lower than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 77.0 on May 24; the lowest in the month was 33.6 on May 5; and the range was 43.4.

The mean of all the highest daily readings in the month was 66.8, being 2.9 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 43.9, being 0.2 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 22.9, being 2.7 greater than the average for the 65 years, 1841-1905.

The mean for the month was 54.6, being 1.6 higher than the average for the 65 years, 1841-1905.

Number of Column for Reference	20	21	22	23	24	25	26	27	28	29						30		

The mean Temperature of Evaporation for the month was $49^{\circ} 5$, being $0^{\circ} 5$ higher than the mean Temperature of the Dew Point for the month was $44^{\circ} 7$, being $0^{\circ} 3$ lower than the mean Degree of Humidity for the month was $70^{\circ} 1$, being $4^{\circ} 1$ less than the mean Elastic Force of Vapour for the month was $0^{\text{in.}} 296$, being $0^{\text{in.}} 003$ less than the mean Weight of Vapour in a Cubic Foot of Air for the month was $3^{\text{grs.}} 3$, being $0^{\text{grs.}} 1$ less than the mean Weight of a Cubic Foot of Air for the month was 536 grains, being 2 grains less than the mean amount of Cloud for the month (a clear sky being represented by 0 and an overcast sky by 10) was 6.2 . The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0.485 . The maximum daily amount of Sunshine was 14.7 hours on May 22. The highest reading of the Solar Radiation Thermometer was $145^{\circ} 1$ on May 31; and the lowest reading of the Terrestrial Radiation Thermometer was $24^{\circ} 8$ on May 5. The Proportions of Wind referred to the cardinal points were N. 6, E. 5, S. 8, W. 6. Six days were calm. The Greatest Pressure of the Wind in the month was 6.0 lbs. on the square foot on May 30. The mean daily Horizontal Movement of the Air for the month was 230 miles; the greatest daily value was 463 miles on May 30; and the least daily value was 74 miles on May 12. Rain ($0^{\text{in.}} 005$ or over) fell on 16 days in the month, amounting to $1^{\text{in.}} 254$, as measured by gauge No. 6 partly sunk below the ground; being $0^{\text{in.}} 661$ less than the average fall for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit).	TEMPERATURE.								Difference between the Air Temperature and Dew Point Temperature.	TEMPERATURE.				Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the Ground.	Electricity.	hours. hours.	Daily Duration of Sunshine.	Sun above Horizon.	
		Of the Air.				Of Evapo- ration.	Of the Dew Point.	Mean. Greatest. Least.	Degree of Humidity (Saturation = 100).		Of Radiation.	Of the Earth 4 ft. below the Surface of the Soil.								
		Highest.	Lowest.	Daily Range.	Mean of 24 Hourly Values.	Excess above Average of 65 Years.	Mean of 24 Hourly Values.	Deduced Mean Daily Value.	Mean.	Highest in Sun's Rays.	Lowest on the Grass.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29.988, being 0.173 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 85.9 on June 25; the lowest in the month was 37.3 on June 19; and the range was 48.6.

The mean of all the highest daily readings in the month was 71.8, being 1.0 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 48.8, being 1.0 lower than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 23.0, being 2.2 greater than the average for the 65 years, 1841-1905.

The mean for the month was 59.8, being 0.4 higher than the average for the 65 years, 1841-1905.

The mean Temperature of Evaporation for the month was $53^{\circ}.6$, being $1^{\circ}.3$ lower than the mean Temperature of the Dew Point for the month was $48^{\circ}.1$, being $2^{\circ}.8$ lower than the mean Degree of Humidity for the month was 65.7 , being 7.9 less than the mean Elastic Force of Vapour for the month was 0.336 , being 0.037 less than the mean Weight of Vapour in a Cubic Foot of Air for the month was 3.8 , being 0.4 less than the mean Weight of a Cubic Foot of Air for the month was 534 grains, being 3 grains greater than the mean amount of Cloud for the month (a clear sky being represented by 0 and an overcast sky by 10) was 6.6 . The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0.449 . The maximum daily amount of Sunshine was 15.1 hours on June 28. The highest reading of the Solar Radiation Thermometer was $146^{\circ}.1$ on June 25; and the lowest reading of the Terrestrial Radiation Thermometer was $21^{\circ}.6$ on June 19. The Proportions of Wind referred to the cardinal points were N. 11, E. 6, S. 1, W. 5. Seven days were calm. The Greatest Pressure of the Wind in the month was 6.0 lbs. on the square foot on June 6 and 10. The mean daily Horizontal Movement of the Air for the month was 250 miles; the greatest daily value was 454 miles on June 6; and the least daily value was 80 miles on June 23. Rain (0.005 or over) fell on 5 days in the month, amounting to 445 , as measured by gauge No. 6 partly sunk below the ground; being 1.593 less than the average fall for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

The results apply to the civil day, except columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk of the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29ⁱⁿ.887, being 0ⁱⁿ.088 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.
The highest in the month was 94°·0 on July 11; the lowest in the month was 44°·5 on July 1; and the range was 49°·5.
The mean of all the highest daily readings in the month was 81°·6, being 7°·4 higher than the average for the 65 years, 1841-1905.
The mean of all the lowest daily readings in the month was 55°·4, being 2°·1 higher than the average for the 65 years, 1841-1905.
The mean of the daily ranges was 26°·2, being 5°·3 greater than the average for the 65 years, 1841-1905.
The mean for the month was 67°·6, being 4°·9 higher than the average for the 65 years, 1841-1905.

The mean Temperature of Evaporation for the month was $59^{\circ} 3$, being $1^{\circ} 4$ higher than the mean Temperature of the Dew Point for the month was $52^{\circ} 8$, being $1^{\circ} 0$ lower than the mean Degree of Humidity for the month was 59.7 , being 13.1 less than the mean Elastic Force of Vapour for the month was 0.00400 , being 0.0015 less than the mean Weight of Vapour in a Cubic Foot of Air for the month was 4.04 , being 0.042 less than the mean Weight of a Cubic Foot of Air for the month was 524 grains, being 3 grains less than the mean amount of Cloud for the month (a clear sky being represented by 0 and an overcast sky by 10) was 5.5 . The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0.573 . The maximum daily amount of Sunshine was 14.9 hours on July 9.

The highest reading of the Solar Radiation Thermometer was $157^{\circ} 4$ on July 17; and the lowest reading of the Terrestrial Radiation Thermometer was $30^{\circ} 6$ on July 1. The Proportions of Wind referred to the cardinal points were N. 6, E. 5, S. 5, W. 6. Nine days were calm. The Greatest Pressure of the Wind in the month was 7.8 lbs. on the square foot on July 28. The mean daily Horizontal Movement of the Air for the month was 217 miles; the greatest daily value was 537 miles on July 23; and the least daily value was 68 miles on July 17. Rain (0.005 or over) fell on 3 days in the month, amounting to 0.150 , as measured by gauge No. 6 partly sunk below the ground; being 2.49 less than the average fall for the 65 years, 1841-1905.

} the average for the 65 years, 1841-1905.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29.750, being 0.033 lower than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 82.0 on August 19; the lowest in the month was 40.3 on August 31; and the range was 41.7.

The mean of all the highest daily readings in the month was 74.2, being 1.5 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 53.4, being 0.4 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 20.8, being 1.1 greater than the average for the 65 years, 1841-1905.

The mean for the month was 62.7, being 1.0 higher than the average for the 65 years, 1841-1905.

The mean *Temperature of Evaporation* for the month was $56^{\circ}9$, being $o^{\circ}6$ lower than the mean *Temperature of the Dew Point* for the month was $52^{\circ}1$, being $1^{\circ}9$ lower than the mean *Degree of Humidity* for the month was $68\cdot9$, being $7\cdot4$ less than the mean *Elastic Force of Vapour* for the month was $o^{in}389$, being $o^{in}029$ less than the mean *Weight of Vapour in a Cubic Foot of Air* for the month was $48\cdot3$, being $o^{in}3$ less than the mean *Weight of a Cubic Foot of Air* for the month was 527 grains, being 1 grain less than the mean amount of *Cloud* for the month (a clear sky being represented by o and an overcast sky by 10) was $6\cdot9$. The mean proportion of *Sunshine* for the month (constant sunshine being represented by 1) was $o\cdot397$. The maximum daily amount of *Sunshine* was $12\cdot7$ hours on August 6 and 18. The highest reading of the *Solar Radiation Thermometer* was $148^{\circ}0$ on August 10; and the lowest reading of the *Terrestrial Radiation Thermometer* was $25^{\circ}0$ on August 31. The *Proportions of Wind* referred to the cardinal points were N. 4, E. 2, S. 7, W. 12. Six days were calm. The *Greatest Pressure of the Wind* in the month was $9\cdot6$ lbs. on the square foot on August 5. The mean daily *Horizontal Movement of the Air* for the month was 251 miles; the greatest daily value was 565 miles on August 6; and the least daily value was 107 miles on August 10. Rain ($o^{in}005$ or over) fell on 10 days in the month, amounting to $o^{in}683$, as measured by gauge No. 6 partly sunk below the ground; being $o^{in}661$ less than the average fall for the 65 years, 1841-1905.

the average for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit).	TEMPERATURE.							Difference between the Air Temperature and Dew Point Temperature.	TEMPERATURE.				Electricity	Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the Ground.	hours. Daily Duration of Sunshine.	Sun above Horizon.		
		Of the Air.				Of Evapo- ration.	Of the Dew Point.	Of Radiation.			Of the Earth 4 ft. below the Surface of the Soil.								
		Highest.	Lowest.	Daily Range.	Mean of 24 Hourly Values.	Excess above Average of 65 years.	Mean of 24 Hourly Values.	Dedu- ced Mean Daily Value.	Mean.	Greatest.	Least.	Degree of Humidity (Saturation = 100).

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29.949, being 0.138 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 87.9 on September 9; the lowest in the month was 37.3 on September 28; and the range was 50.6.

The mean of all the highest daily readings in the month was 71.5, being 4.2 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 49.3, being 0.2 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 22.2, being 4.0 greater than the average for the 65 years, 1841-1905.

The mean for the month was 59.7, being 2.4 higher than the average for the 65 years, 1841-1905.

The mean *Temperature of Evaporation* for the month was $54^{\circ} \cdot 5$, being $0^{\circ} \cdot 4$ higher than the mean *Temperature of the Dew Point* for the month was $49^{\circ} \cdot 8$, being $1^{\circ} \cdot 4$ lower than the mean *Degree of Humidity* for the month was $70^{\circ} \cdot 3$, being $9^{\circ} \cdot 9$ less than the mean *Elastic Force of Vapour* for the month was $0^{\text{in}} \cdot 358$, being $0^{\text{in}} \cdot 019$ less than the mean *Weight of Vapour in a Cubic Foot of Air* for the month was $4^{\text{in}} \cdot 0$, being $0^{\text{in}} \cdot 0 \cdot 2$ less than the mean *Weight of a Cubic Foot of Air* for the month was 533 grains, being *equal to* the mean amount of *Cloud* for the month (a clear sky being represented by o and an overcast sky by 10) was $5 \cdot 2$. The mean proportion of *Sunshine* for the month (constant sunshine being represented by 1) was $0 \cdot 460$. The maximum daily amount of *Sunshine* was $11 \cdot 1$ hours on September 7 and 8. The highest reading of the *Solar Radiation Thermometer* was $142^{\circ} \cdot 6$ on September 9; and the lowest reading of the *Terrestrial Radiation Thermometer* was $26^{\circ} \cdot 2$ on September 28. The *Proportions of Wind* referred to the cardinal points were N. 3, E. 5, S. 4, W. 7. Eleven days were calm. The *Greatest Pressure of the Wind* in the month was $12 \cdot 0$ lbs. on the square foot on September 12. The mean daily *Horizontal Movement of the Air* for the month was 206 miles; the greatest daily value was 444 miles on September 17, and the least daily value was 74 miles on September 20. Rain ($0^{\text{in}} \cdot 005$ or over) fell on 5 days in the month, amounting to $1^{\text{in}} \cdot 815$, as measured by gauge No. 6 partly sunk below the ground; being $0^{\text{in}} \cdot 333$ less than the average fall for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY 1921.	BARO- METER. Mean of 24 Hourly Values (corrected to 32° Fahrenheit).	TEMPERATURE.						Difference between the Air Temperature and Dew Point Temperature.			TEMPERATURE.			Rain collected in Gauge No. o, whose receiving surface is 5 inches above the Ground.	Electricity.	Daily Duration of Sunshine.	Sun above Horizon.			
		Of the Air.				Of Evapo- ration.	Of the Dew Point.	Degree of Humidity (Saturation = 100).			Of Radiation.	Of the Earth 4 ft. below the Surface of the Soil.								
		Highest.	Lowest.	Daily Range.	Mean of 24 Hourly Values.	Excess above Average of 65 Years.	Mean of 24 Hourly Values.	Dedu- ced Mean Daily Value.	Mean.	Greatest.	Least.	Highest in Sun's Rays.	Lowest on the Grass.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the '65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

*Rainfall (Column 16). The amounts entered on October 1, 12, 13, and 16 were derived from dew.

The mean reading of the Barometer for the month was 29ⁱⁿ.998, being 0ⁱⁿ.277 higher than the average for the 65 years 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 84°.4 on October 6; the lowest in the month was 34°.5 on October 25; and the range was 49°.9.

The mean of all the highest daily readings in the month was 67°.8, being 10°.3 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 47°.0, being 3°.7 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 20°.8, being 6°.5 greater than the average for the 65 years, 1841-1905.

The mean for the month was 56°.3, being 6°.3 higher than the average for the 65 years, 1841-1905.

The mean Temperature of Evaporation for the month was 52°·6, being 4°·7 higher than the mean Temperature of the Dew Point for the month was 49°·2, being 3°·5 higher than

The mean Degree of Humidity for the month was 77·6, being 7·4 less than

The mean Elastic Force of Vapour for the month was 0·n. 351, being 0·n. 044 greater than

The mean Weight of Vapour in a Cubic Foot of Air for the month was 3grs. 9, being 0grs. 4 greater than

The mean Weight of a Cubic Foot of Air for the month was 538 grains, being 2 grains less than

The mean amount of Cloud for the month (a clear sky being represented by o and an overcast sky by 10) was 5·2.

The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0·468. The maximum daily amount of Sunshine was 10·1 hours on October 6.

The highest reading of the Solar Radiation Thermometer was 129°·8 on October 6; and the lowest reading of the Terrestrial Radiation Thermometer was 26°·1 on October 1.

The Proportions of Wind referred to the cardinal points were N. 4, E. 1, S. 7, W. 7. Twelve days were calm.

The Greatest Pressure of the Wind in the month was 7·6 lbs. on the square foot on October 22. The mean daily Horizontal Movement of the Air for the month was 195 miles; the greatest daily value was 442 miles on October 3; and the least daily value was 84 miles on October 26.

Rain (0in. 005 or over) fell on 8 days in the month, amounting to 0in. 799, as measured by gauge No. 6 partly sunk below the ground; being 1in. 983 less than the average fall for the 65 years, 1841-1905.

the average for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit).	TEMPERATURE.							Difference between the Air Temperature and Dew Point Temperature.	Degree of Humidity (Saturation = 100).	TEMPERATURE.			Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the Ground.	Electricity.	hours.	hours.			
		Of the Air.				Of Evapo- ration.	Of the Dew Point.	Of Radiation.			Of the Earth 4 ft. below the Surface of the Soil.									
		Highest.	Lowest.	Daily Range.	Mean of 24 Hourly Values.	Excess above Average of 65 Years.	Mean of 24 Hourly Values	Deduced Mean Daily Value.	Mean.	Greatest.	Least.	Highest in Sun's Rays.	Lowest on the Grass.

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8 and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

* Rainfall (Column 16). The amounts entered on November 9, 10, 15, 25, 26, and 27 were derived from dew, fog and frost.

The mean reading of the Barometer for the month was 29.901, being 0.143 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 58.0 on November 4; the lowest in the month was 25.3 on November 13; and the range was 32.7.

The mean of all the highest daily readings in the month was 45.3, being 3.7 lower than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 34.6, being 3.3 lower than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 10.7, being 0.5 less than the average for the 65 years, 1841-1905.

The mean for the month was 39.6, being 3.9 lower than the average for the 65 years, 1841-1905.

Daily Duration of Sunshine.

Number of Column for Reference	20	21	22	23	24	25	26	27	28	29			

The mean Temperature of Evaporation for the month was $37^{\circ}7$, being $4^{\circ}2$ lower than

The mean Temperature of the Dew Point for the month was $35^{\circ}0$, being $5^{\circ}0$ lower than

The mean Degree of Humidity for the month was $84^{\circ}1$, being $3^{\circ}2$ less than

The mean Elastic Force of Vapour for the month was $0^{\text{in}}\cdot204$, being $0^{\text{in}}\cdot043$ less than

The mean Weight of Vapour in a Cubic Foot of Air for the month was $28^{\text{gr}}\cdot4$, being $0^{\text{gr}}\cdot4$ less than

The mean Weight of a Cubic Foot of Air for the month was 555 grains, being 7 grains greater than

The mean amount of Cloud for the month (a clear sky being represented by 0 and an overcast sky by 10) was 6·8.

The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was 0·202. The maximum daily amount of Sunshine was 8·0 hours on November 10.

The highest reading of the Solar Radiation Thermometer was $98^{\circ}6$ on November 5; and the lowest reading of the Terrestrial Radiation Thermometer was $15^{\circ}0$ on November 11.

The Proportions of Wind referred to the cardinal points were N. 4, E. 8, S. 5, W. 4. Nine days were calm.

The Greatest Pressure of the Wind in the month was 21·8 lbs. on the square foot on November 6. The mean daily Horizontal Movement of the Air for the month was 216 miles; the greatest daily value was 626 miles on November 6; and the least daily value was 84 miles on November 27.

Rain ($0^{\text{in}}\cdot005$ or over) fell on 11 days in the month, amounting to $1^{\text{in}}\cdot764$, as measured by gauge No. 6 partly sunk below the ground; being $0^{\text{in}}\cdot456$ less than the average fall for the 65 years, 1841-1905.

} the average for the 65 years, 1841-1905.

DAILY RESULTS OF THE METEOROLOGICAL OBSERVATIONS

MONTH and DAY, 1921.	BARO- METER. Mean of 24 Hourly Values (corrected and reduced to 32° Fahrenheit).	TEMPERATURE.								Difference between the Air Temperature and Dew Point Temperature.	Degree of Humidity (Saturation = 100).	TEMPERATURE.			Rain collected in Gauge No. 6, whose receiving surface is 5 inches above the ground.	Electricity.	hours. o.o	hours. 8.I

The results apply to the civil day, except Columns 20 to 23 (Record of the Night Sky), which relate to the period extending from dusk on the civil day named, to dawn of the following day.

The mean reading of the Barometer (Column 1) and the mean temperatures of the Air and Evaporation (Columns 5 and 7) are deduced from the photographic records. The average temperature (Column 6) is deduced from the 65 years' observations, 1841-1905. The temperature of the Dew Point (Column 8) and the Degree of Humidity (Column 12) are deduced from the corresponding temperatures of the Air and Evaporation by means of Glaisher's Hygrometrical Tables. The mean difference between the Air and Dew Point Temperatures (Column 9) is the difference between the numbers in Columns 5 and 8, and the Greatest and Least Differences (Columns 10 and 11) are deduced from the 24 hourly photographic measures of the Dry-bulb and Wet-bulb Thermometers. The readings in Column 15 are taken daily at noon.

The values given in Columns 2, 3, 4, 13, and 14 are derived from eye-readings of self-registering thermometers.

The mean reading of the Barometer for the month was 29.888, being 0.103 higher than the average for the 65 years, 1841-1905.

TEMPERATURE OF THE AIR.

The highest in the month was 57.4 on December 28; the lowest in the month was 29.3 on December 26; and the range was 28.1.

The mean of all the highest daily readings in the month was 49.1, being 4.9 higher than the average for the 65 years, 1841-1905.

The mean of all the lowest daily readings in the month was 39.5, being 4.5 higher than the average for the 65 years, 1841-1905.

The mean of the daily ranges was 9.6, being 0.4 greater than the average for the 65 years, 1841-1905.

The mean for the month was 44.6, being 4.7 higher than the average for the 65 years, 1841-1905.

MADE AT THE ROYAL OBSERVATORY, GREENWICH, IN THE YEAR 1921.

The mean Temperature of Evaporation for the month was $42^{\circ}\cdot 3$, being $3^{\circ}\cdot 8$ higher than the mean Temperature of the Dew Point for the month was $39^{\circ}\cdot 6$, being $2^{\circ}\cdot 9$ higher than the mean Degree of Humidity for the month was $83\cdot 0$, being $5\cdot 6$ less than the mean Elastic Force of Vapour for the month was $0\text{in.}243$, being $0\text{in.}025$ greater than the mean Weight of Vapour in a Cubic Foot of Air for the month was $2\cdot 8\text{grs.}$, being $0\cdot 2\text{grs.}$ greater than the mean Weight of a Cubic Foot of Air for the month was 549 grains, being 3 grains less than the mean amount of Cloud for the month (a clear sky being represented by o and an overcast sky by 10) was $7\cdot 9$.

The mean proportion of Sunshine for the month (constant sunshine being represented by 1) was $0\cdot 117$. The maximum daily amount of Sunshine was $4\cdot 9$ hours on December 20 .

The highest reading of the Solar Radiation Thermometer was $71^{\circ}\cdot 0$ on December 18 ; and the lowest reading of the Terrestrial Radiation Thermometer was $27^{\circ}\cdot 0$ on December 14 .

The Proportions of Wind referred to the cardinal points were N. 5, E. 3, S. 6, W. 14. Three days were calm.

The Greatest Pressure of the Wind in the month was $16\cdot 2$ lbs. on the square foot on December 30 . The mean daily Horizontal Movement of the Air for the month was 380 miles; the greatest daily value was 757 miles on December 28 ; and the least daily value was 107 miles on December 12 .

Rain ($0\text{in.}005$ or over) fell on 15 days in the month, amounting to $1\text{in.}381$, as measured by gauge No. 6 partly sunk below the ground; being $0\text{in.}446$ less than the average fall for the 65 years, $1841-1905$.

} the average for the 65 years, $1841-1905$.

HIGHEST and LOWEST READINGS of the BAROMETER, reduced to 32° FAHRENHEIT, as extracted from the PHOTOGRAPHIC RECORDS.

The readings in the above table are accurate, but the times are occasionally liable to uncertainty, as the barometer will sometimes remain at its extreme reading without sensible change for a considerable interval of time. In such cases the time given is the middle of the stationary period.

The time is expressed in civil reckoning, commencing at midnight and counting from 0^h to 24^h.

The height of the barometer cistern above mean sea level is 152 feet; no correction has been applied to the readings to reduce to sea level.

HIGHEST and LOWEST READINGS of the BAROMETER in each Month for the YEAR 1921.

MONTH, 1921.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a Cubic Foot of Air.	Mean Weight of a Cubic Foot of Air.	Mean Temperature at Noon of the Earth 4 feet below the surface of the soil.	Mean Amount of Cloud (0-10.)	Number of Rainy Days (0-in-005 or over).	Amount collected in Gauge No. 6, whose receiving Surface is 5 inches above the Ground.	RAIN.		WIND.								
								From Osler's Anemometer.		Number of Hours of Prevalence of each Wind referred to different Points of Azimuth.								
N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Number of Calm or nearly Calm Hours.	Mean Daily Pressure on the Square Foot.	Number of Calm or nearly Calm Hours.	Mean Daily Pressure on the Square Foot.	From Robin- son's Anemo- meter.	Mean Daily Horizontal Movement of the Air.
